

I remain totally opposed to Rosefields solar plan. The beautiful countryside, road access, a national grid that is already full, cumulative impact of BESS sites, lack of local national grid access, the blight of HS2 locally which continues its devastating impact on the environment (we put a £100 million bat tunnel in to protect the species and then want to build a solar farm down the road) local projects like the prison. All of this and another project that will simply add to the local burden. Please reconsider and look at more appropriate sites or better still roofs! Thank you
