

I object to this project for many reasons. The negative cumulative effect due to the different applications and development in this area such as East West Rail, HS2, Grendon Prison, houses for East Claydon and Winslow, the new National Grid substation, Statera and Statkraft BESS, and other solar and BESS applications in the area. This rural area cannot cope; roads, loss of jobs, loss of food from high yielding farmland, impact on precious and rare wild life. The health of the community is paramount. The negative impact of the noise, disruption to beautiful views, countryside that provide a safe haven and opportunity to exercise and unwind from our fast paced world. Safety is also a concern as I am not convinced that we will be protected from pollution if there is a fire on the Rosefield development. I believe there are other solutions to provide us with safe energy without the devastation that the proposed solar technology.
