

This development is hugely concerning for the whole area. Huge loss of farmland and grazing, never mind the destruction of a huge area supporting significant wildlife populations. The local roads are not capable of supporting the traffic increase at all, they are already falling apart from years of HS2 and East/West traffic, and have not been repaired. Never mind the fact that most of the village roads are just not big enough for the huge lorries that will need to come through. Additionally these battery sites produce huge noise and heat pollution which is a huge worry in these times when the dry weather could result in fires and meltdowns.
