

Please find attached an article in the Telegraph on 5th August 2026.

This re iterates my previous comments/concerns of no connection. These people having to wait have a substation they can connect to Rosefield does not even have a sub station built. There is no Need for Rosefield there are enough projects already with permission.

Since my previous comments we continue with a heat wave and drought and we are told this is going to be the new normal. Again I wanted to re iterate how are we going to grow food for ourselves and our animals when we continue to lose farmland, nearly 2,100 of good agricultural land gone to solar makes no sense for food security in this country. We need to prioritise our Farmers who will keep us fed.
