

Id like to raise two key points for review and responses to both of these points.

1: it has come to light that the 400 responses collected by the Parish Councils and submitted to One Earth as part of the 'consultation' exercise were not submitted to the relevant parties so were never seen as part of the process. This is highly disappointing given the level of effort by all those involved in collecting the responses from those who love and work and will be ultimately impacted by this project. Can One Earth explain why this were not submitted?

2: Despite numerous requests, even being asked at the on site visits we are still to be shown any clear plans that highlight where the battery storage containers are going to be sited, they were originally shown at one of the consultation events but after highlighting how big they were and there were up to five along our boundary to our land the have not appeared since on any plans. Likewise no clear plans on where CCTV and lighting will be located, when this will be in operation and the impact that has on the privacy and lighting up of the scheme. No clear view of the fencing that will be used along the boundary and the impact on our views out of the property. How will there be visualised and addressed?
