

GREAT NORTH ROAD SOLAR AND BIODIVERSITY PARK

Viewpoint 14
B1164 Weston

Cardinal views analysis:

Existing View

Located on the edge of Weston, this view looks up the B1164 to the southeast, where the view is immediately constrained by the rising land and properties on the opposite side of the road. The land falls to the west and the view looks down the B1164 over the roadside vegetation to partially screened views of fields, residential and agricultural buildings, and elements of infrastructure, including electricity pylons and wind turbines. Tuxford Road solar farm will be partly visible along the skyline through trees to the north.

Predicted Changes to Views

During construction, traffic would route along the B1164 and would be visible as it passes the viewpoint. There would be very limited view of a solar area to the northwest over the roadside hedge during all stages of the development, though this would be barely noticeable.
