

GREAT NORTH ROAD SOLAR AND BIODIVERSITY PARK

Viewpoint 26
Bridleway north of Cauntton

Cardinal views analysis:

Key

- No solar areas visible from this viewpoint in this direction
- Wireline indicates theoretical visibility but would not be discernible in practice
- Visibility of solar areas in this direction during summer and winter
- Visibility of solar areas in this direction during winter only
- S An intermediate substation is visible in this direction of the view, refer to text
- M The main 400kV substation is visible in this direction of the view
- Be The BESS is visible in this direction of the view

90deg baseline panorama, wireline and photomontage

Existing View
This view is from a break in vegetation at a field entrance over low fields, divided by hedgerows and trees where the outlook is open to the north and contained by hedges and rising ground to the south. There are occasional buildings and areas of woodland within the view.

Predicted Changes to Views
During construction and early operation there would be views of the solar areas on facing slopes to the northwest. Mill Lane substation would also be seen in front of Cocked Hat Plantation. Once fully grown, mitigation planting would slightly reduce the extent of the Development that would be visible, however views would remain during operation and decommissioning. Once decommissioned, taller hedgerows and the mitigation planting would remain, forming a small alteration to the view.
