

**Existing View**  
This viewpoint is located on a footpath through open arable fields. Views to the north are contained by higher ground and the nearby hedge. Views to the south are open and look across a valley towards Eakring and pylons at the training centre to the southwest, with wind turbines beyond. Views in other directions are of fields divided by hedges and trees, interspersed with woodland blocks and farms.

**Predicted Changes to Views**  
During construction and operation, solar arrays would be seen on the rising ground to the southwest in front of the pylons at the training centre. Smaller areas of solar arrays would be seen to either side of Parkhill Plantation along the skyline to the south. Mitigation planting and taller hedges would only slightly reduce visibility once mature and would remain after decommissioning.

# GREAT NORTH ROAD SOLAR AND BIODIVERSITY PARK

Viewpoint 50  
Footpath near Park Farm

## Cardinal views analysis:

- Key**
- No solar areas visible from this viewpoint in this direction
  - Wireline indicates theoretical visibility but would not be discernible in practice
  - Visibility of solar areas in this direction during summer and winter
  - Visibility of solar areas in this direction during winter only
- S An intermediate substation is visible in this direction of the view, refer to text
- M The main 400kV substation is visible in this direction of the view
- Be The BESS is visible in this direction of the view
