

Existing View
This viewpoint is located on a footpath across an arable field. The view to the north is curtailed by nearby rising ground and a roadside hedge. There are panoramic views in other directions looking out over large arable fields divided by hedges and trees with farms and villages among these. Nearby pylon routes are distinctive linear features in the view and taller vehicles can be seen moving along the A1 to the south and southwest. Tuxford Road solar farm will be visible in fields nearby to the west once constructed.

Predicted Changes to Views
During construction and operation, solar arrays and the Ossington Road substation would be visible in the distance in fields seen beyond the trees and buildings at Weston and in front of woodland on the skyline. Mitigation planting and taller hedges would only slightly reduce the visibility and would remain once decommissioned.
