

I would like to request that the ExA visit The Shires Castle Hill Carlton on Trent to view the water course at the bottom of the garden and to discuss flooding because run off waters and ditches converge in this area and the flood water levels observed here over 18 years have been indicative of flooding occurrences in Sutton on Trent. Also to view the visual impact from this property which hasn't been identified in the visual impact assessment as being significantly impacted but will have a specific issue if hedge h158 is raised to reduce visual impact and is impacted if the hedge remains at its present height. This is not publicly accessible land.
