

In summary but to be expanded upon on the 27th:

- a) Flooding - Impact of large number of panels, problems exacerbated by the topography and soil type, and recognised factors that would mitigate.
- b) Biodiversity - Impacts on wildlife, loss of corridor and long term impacts.
- c) BMV land and soil degradation.
- d) BNG -
- e) Visual Impact - Loss of historical landscape features including loss due to high hedges and impact of deer fencing, accumulative effect, and mitigation measures yet to be considered by Elements Green. We asked for addition visualisations of key sites from Elements Green, but none were provided. We do not believe 'wire lines' are a true representation and asked these were produced as a photomontage.
