

Regarding commitments made, what guarantees are there that monitoring will occur post construction.

The quarry goes into production may26, 200 hgv movements per day, cumulative impact on all fronts. Traffic management plan considering revised speed limits, road markings, interactive speed signs, review to include STEP fusion, quart RES and other stakeholders.

Regarding North Leverton Windmill I asked the cost in MW or % of project, removing the field might be RES are very hard nosed and not giving any ground.

Mitigation measures are suggested, but there is no meat on the bones, we are concerned about impacts on the village, RES speaks of impacts on the project.

The PC agree with all the concerns regarding health and welfare, if granted you won't see all these lawyers and specialists for smoke.

Regarding battery storage RES say the have spoken to the Notts Fire service for advice. I am yet to be convinced that NFS or anyone else has expertise in this newly emerging technology, there seems to be very little regulation or guidance.

The above are comments made by me in the consultation
