Appendix 19-1: Lime Down A, Phase 1 Desk Study, Conceptual Site Model and Preliminary Risk Assessment

1.1 Introduction

1.1.1 Geosyntec Consultants Limited (Geosyntec) was commissioned by the Applicant prepare the Ground Conditions chapter of the Environmental Statement (ES) for the Scheme. The PV and BESS infrastructure would be located across five land parcels (Lime Down A–E), collectively known as the Solar PV Sites. **Appendix 19-16: Preliminary Risk Assessment Approach and Methodology [EN010168/APP/6.3** presents the Phase 1 desk study information to allow the development of the initial Conceptual Site Model (CSM) and Preliminary Risk Assessment (PRA) to inform the baseline for **ES Volume 1, Chapter 19: Ground Conditions [EN010168/APP/6.1]** for Solar PV Site Lime Down A (the Site).

Sources of Information

1.1.2 This report has been prepared using a combination of published records (e.g., British Geological Survey (BGS), Environment Agency, Defra) and information provided by the Applicant. These include statutory records and historical mapping supplied within a Landmark Envirocheck Report, published geological and hydrogeological mapping and historical borehole records. Delta-Simons Desk Study has also been referred to for information on the site walkover.

1.1.3 Specific information sources are referenced throughout the document and are summarised in **Table 1**.

Table 1: Sources of Information

1.2 Site Context

Site Location and Description

1.2.1 The Site location and description for Solar PV Site Lime Down A are included in **Table 2**.

Table 2 Site Location and Description

Site Location and Description	
Site Location	Land to the southeast of Sherston in Wiltshire. Closest post code SN16 0PU. National Grid Reference (NGR): NGR ST 86281, 84700

Site Location and Description	
	Site Description	The Site comprises two land parcels, a roughly square piece of land next to a longer, irregular shaped piece of land totaling approximately 94ha and spanning either side of the road Bustler's Hill. The Site is predominantly agricultural comprising fields, hedges and trees. From the OS plans, there are two ponds in the north of the Site. Two streams begin in the very south of the Site near Lordswood House and Lordswood Farm c.120m east of site.
Infrastructure	A bridleway crosses through the center of the western portion of the Site, from the northern boundary to the southern boundary. A public footpath runs through the eastern portion of the Site, south of Foxley Road down to the southeast. An above ground 11 kV power line cuts through the southwest portion of the site.
Topography	The Site is generally flat gently sloping from 120 m above Ordnance Datum (OD) elevation in the northwest down to 115 m OD elevation in the southern half of the Site.
Adjacent and Surrounding Land Use (pertinent features)	North: Four residential properties directly adjacent to the northern boundary, beyond which is farmland and the River Avon approximately 260 m away
	East: Residential properties and equestrian centre approximately 500m from the eastern border of the Site, beyond which is farmland.

Site Location and Description	
	South: Vehicle repair company located c.170 m southeast of the Site, beyond which is farmland. Stream located 120 m away.
	West: Farmland and Commonwood Lane. Beyond, farmland.

Historical Setting

1.2.2 Historical Ordnance Survey (OS) maps of the Site and the wider environs were provided in the Landmark Envirocheck Report (scales 1:10,000 and 1:10,560) and viewed from Google Earth Pro and these are reviewed in this section. Copies of these maps are presented as Annex 19-1-1.

1.2.3 The historical Ordnance Survey (OS) maps obtained with the Landmark Envirocheck report date between 1888 and 2024.

1.2.4 **Table 3** below presents a summary of the main features present on and within approximately 250 m radius of the Site boundary. Geosyntec notes that only indicative map scales are provided. Where dates are stated, these refer to the dates of maps on which the features are present, have changed use or are no longer annotated, and do not necessarily refer to the exact dates of existence of a particular feature. Development that may have occurred between map editions is recorded as occurring on the latter published map, hence there are some limitations to the accuracy to the date of development unless supplementary evidence is available.

Table 3: Summary of Historical Uses

Historical Use of Site and Surroundings		
On-site	1888	Agricultural land comprising several fields, hedges and a number of small ponds. Rises are marked in the south. A footpath is present from north to south across the Site. A small barn present to the north.
	1900	No significant changes.
	1923	No significant changes.
	1924	No significant changes.
	1955	No significant changes.
	1983	Some small ponds are no longer marked. Farmers yard with potential associated hardstanding in the corner of the site to the east of Bustler's Hill.
	1999	No significant changes.
	2024	Last remaining pond is no longer marked.
	1888	Agricultural land.

Historical Use of Site and Surroundings		
Off-site (within 250m)	1900	Quarry immediately to the north. Old quarrying sites to the west.
	1923	Quarry to the north of the site now designated 'Old Quarry'.
	1924	No significant changes.
	1955	No significant changes.
	1983	Development of two small clusters of properties along Commonwood Lane. 'Southfields' building to the north.
	1999	No significant changes.
	2024	No significant changes.

1.2.5 The maps show that Lime Down A has been farmland since the earliest available mapping in, 1888, with a small barn towards the north and an area of hardstanding in the northeast of the Site. Ponds have been noted on the Site which are no longer present. It is possible that the ponds naturally dried up or that they may have been backfilled. Small areas within 250 m of the Site have been developed into residential property, with clusters appearing on the map in 1983. Old Quarries have been recorded in the surrounding area.

1.2.6 From Google Earth it is apparent that the hardstanding in the northeast of the Site has been used to store hale bails and farming equipment.

Physical and Environmental Setting

1.2.7 The physical setting including the topography, geology, hydrogeology and hydrology are the key factors that influence the way in which contaminants in the soil or groundwater can be transported on or off site, and also the way in which contamination can affect applicable receptors including controlled waters and users of the Site.

1.2.8 The physical and environmental setting of the Site, in **Table 4** and **Table 5** below, has been assessed by making reference to the information sources detailed in **Table 1**.

Table 4: Summary of Physical Characteristics

Physical Setting	
Anticipated Ground Conditions, Geology and Geohazards	
Geology	**Anthropogenic Strata - made ground or backfill:** Made ground is not recorded on the BGS Mapping for the Site. However, there may be made ground associated with historical land uses such as agricultural activities, field entrances, and potential backfilled ponds.
	Soils:

Physical Setting		
	The soils anticipated on the Site are lime-rich loamy and clayey soils with impeded drainage. Further information is contained within **ES Volume 1, Chapter 17: Soils and Agriculture, [EN01068/APP/6.1]**.	
	Superficial Geology: No superficial deposits are indicated to be present on Site. Head deposits are present in the wider area.	
	Solid Geology: The solid geology beneath the Site comprises the Forest Marble Formation. The stratum comprises greenish grey mudstone with lenticular typically cross-bedded and shelly limestone units. The formation is typically 10-30 m thick, overlying Chalfield Oolite Formation. The depth to engineering rock head is unknown, however, it is anticipated that the upper stratum will be completely weathered to a clay, becoming rock strength at relatively shallow depths.	
	Geological Structures: No recorded faulting has been identified at the Site. The solid geology is indicated to dip down to the southeast.	
	Borehole Records: No BGS boreholes are recorded on Site. Off Site within 100 m there are two BGS boreholes (ST88SE10 and ST88SE11) located at Lord's Wood Farm to the southeast of the Site. However, both are recorded on the same borehole log which is illegible.	
Geohazards	**Hazard Type**	**Hazard Potential**
	Collapsible Ground	No hazard to very low
	Compressible Ground	No hazard or low
	Ground Dissolution	No hazard to low
	Landslide	Very low to low
	Running Sand	No hazard to low
	Shrinking or Swelling Clay	No hazard to moderate
Ground Cavities and Sinkholes	No records of natural cavities or BGS karst data have been provided in the Envirocheck report.	
Radon	Most of the Site is indicated to be in an area of less than 1% radon potential. Northern areas of the Site are shown as 1-3% maximum radon potential.	

Physical Setting	
Coal Mining	The Coal Authority interactive map viewer shows that the Site is not within a Coal Mining Reporting Area, and therefore is not in a Development High Risk Area. No Coal Mining Risk Assessment (CMRA) is considered necessary.
Non-Coal Mining/Minerals	The Landmark Envirocheck report identifies two opencast clay and shale quarries to the north and west of the Site, operations have now ceased.
Evidence of Land Contamination	A site walkover was carried out by Delta Simons on 31 January 2024. No significant evidence of contamination (visual and olfactory) was observed during the walkover.
Aggressive Ground Conditions	Sulfates may be found in locally significant concentrations in a wide range of natural strata ranging from Carboniferous mudstones to recent Alluvium and made ground.
Hydrogeology	
Aquifer Designation	The Forest Marble Formation is designated as a Secondary A aquifer.
Groundwater Vulnerability	The Secondary A bedrock aquifer is stated as being high vulnerability.
Source Protection Zone Status	The Site is within a Source Protection Zone 2 (SPZ2) – outer catchment where pollutants take up to 400 days to reach the water source. The SPZ2 relates to an abstraction borehole approximately 7km to the east of the Site.
Licensed Groundwater Abstraction	There are no licensed groundwater abstraction licenses recorded in the vicinity of the Site.
Local Authority Registered Private Water Supply Abstractions	Wiltshire Council were contacted for information on private water supply abstractions. There are no recorded private water supplies on or within 100 m of the Site.
Groundwater Flooding Potential	Flooding from groundwater is unlikely in this area.
Hydrology	
Surface Water Courses and Drainage	From the Ordnance Survey plans there are two ponds in the north of the Site and two streams begin in the south of the Site which flow to a stream approximately 120 m to the south. A number of small ponds are also present in the vicinity of the Site and a Spring is also present approximately 270 m to the east of the Site. The River Avon is located 260 m to the north of the Site at its closest point, flowing in an easterly direction.

Physical Setting	
Catchment Information	Approximately half the Site to the northeast is in the catchment of the Sherston Avon River water body, of poor ecological status (poor biological quality, moderate-good physico-chemical quality). The southwestern half is in the catchment of the Sherston Avon tributary, of good ecological status (good biological quality, good physico-chemical quality).
Licensed Surface Water Abstractions	No Licensed Surface Water Abstractions have been identified within 1 km of the site.
Local Authority Registered Surface Water Abstractions	Wiltshire Council were consulted for information on private water abstractions. At the time of writing, there are no records of private water supply.
Risk of Flooding from Surface Waters	The gov.uk flood map for planning shows that the Site is in Flood Zone 1 – low probability of fluvial and marine flooding (in any year land has a less than 0.1% chance of flooding from rivers or the sea). A Flood zone 3 is present off-site to the south of the Site, associated with a stream. Refer to **ES Volume 1, Chapter 11: Hydrology, Flood Risk and Drainage [EN01068/APP/6.1]** for additional detail.

Table 5: Summary of Other Environmental Information

Environmental Setting	
Protected Areas	
Sensitive Sites (within 250 m)	**Protected Woodland:** An Ancient Woodland is present approximately 200 m away from the southern boundary. **SSSI/SPA/SAC etc:** There are no SSSI/SPA/SAC within 250 m and the Site is not within a SSSI Impact Risk Zone. Refer to **ES Volume 1, Chapter 9: Ecology and** Biodiversity [EN01068/APP/6.1] and **ES Volume 1, Chapter 10: Arboriculture [EN01068/APP/6.1]** for additional detail.
Cultural Heritage	No areas of cultural heritage interest are located on site. Refer to ES Volume 1, Chapter 12 Cultural Heritage [EN01068/APP/6.1 for additional detail.
Other	
Asbestos	Singular barn recorded in maps from 1888 to present. Agricultural buildings can contain asbestos containing materials. No asbestos surveys available for the Site.

Environmental Setting	
Invasive Plants	No observations of invasive plant species were noted in the Delta Simons site walkover. Detailed information is contained within **ES Volume 1, Chapter 9: Ecology and Biodiversity [EN01068/APP/6.1]**
Unexploded Ordnance	Zetica UXO maps show a low risk of unexploded ordnance.
Nitrate Vulnerability	The Site is located in a nitrate vulnerable zone.

Regulated Activities

1.2.9 The key relevant features that characterise the Site and surrounding area are summarised in this section, along with an indication of the risk to the land quality of the Site.

1.2.10 Information on groundwater and surface water abstractions is detailed in above sections and is not repeated here.

1.2.11 Generally, any regulated activities and processes, i.e. those covered by national legislation to control industrial emissions such as the Environmental Permitting Regulations 2016, within 250 m of the Site could, depending upon their nature, represent potential off site sources of contamination. Typically, at distances greater than 250 m risks are not likely to be unacceptable with respect to the site development.

Regulated Processes

1.2.12 **Table 6** summarises information on regulated processes contained in the Landmark Envirocheck report (Annex 19-1-2). The report collates data from a variety of sources including the Environment Agency (EA) and the British Geological Survey (BGS). Processes, incidents and inventories not present on or within 250 m of the Site boundary have been excluded from the table. A full list of screening criteria can be found within Annex 19-1-2.

Table 6: Summary of Regulatory Information

Subject	Number present		Details
	On Site	Off Site to 250m	
Agency and Hydrological			
Discharge Consents	-	1	One now inactive discharge consent is listed approximately 90 m to the south, belonging to a farmhouse, located on Commonwood Lane. The

			consent relates to sewage discharge to a freshwater stream which flows to the east.
Substantiated Pollution Incident Register	-	1	One registered pollution incident located approximately 170 m to the east, in September 2005, with no impact on water, minor impact on land, and significant impact on air. Pollution was from waste materials from vehicles and vehicle parts.

1.2.13 There are no additional contaminated land register entries, pollution incidents, pollution prevention controls, prosecutions relating to controlled waters or authorised processes, registered radioactive substances or hazardous substances, identified on or within 250 m of the site.

Licensed Waste Management Facilities

1.2.14 An attempt has been made to identify any landfilling operations, past and present that have taken place in the vicinity of the Site. With reference to the above data there are no recorded licensed waste management facilities on or within 250 m of the Site.

Industrial Land Use

1.2.15 According to the Landmark Envirocheck Report, there are no active or inactive contemporary trade directory entries, fuel station entries, points of interest, gas pipelines or underground electrical cables within 250 m of the Site. However, from Google maps there is a Vehicle repair company located at Lordswood Farm c.170 m east of site.

Site Walkover

1.2.16 A site walkover of Lime Down A was conducted between 1st and 2nd May 2025. A photolog documenting this visit has been created and is appended to this appendix as Annex 19-1-3.

General Zone Description

1.2.17 The majority of the fields in Zone A are comprised of cereal crop fields. These include fields A1, A2, A3, A6, A7 and A9. Grassland is present in fields A4, A8 and A10. Notably both fields A8 and A10 contained meadows of mustard flowers in the western regions, separated by hay bales in A10. Fields A11 and A12 comprised shrubland with a desiccated clayey topsoil, which included a mixture of wheat, grass and wildflowers. Field A5 was the only field that had been ploughed. Most fields are characterised by flat topography with minimal variation, except for A11, which exhibits a gentle east-west slope.

Notable Features

1.2.18 A1 contains overhead wires suspended between telegraph poles, running east-west along the northern boundary. A bridleway runs parallel to the eastern boundary of the field, separated by a dry-stone wall. The bridleway continues into A2 at the A1-A2 boundary. Minor fly tipping was observed in the northern part of A1, adjacent to the gate.

1.2.19 Field A2 contains a ditch exposes a water pipe in the southeastern corner, suggesting a recent repair and live water within the field. A stone wall separates A2 from A3. In the north-eastern corner of A3, there is a dilapidated barn constructed of stone walls and a tin roof, surrounded by overgrown trees and bushes. A bricked-up dry pond is located in the area between A3 and A4, as well a second pond in A5. A stone wall separates A3 and A4.

1.2.20 Within a copse of trees in the northwest of A6, a large hole with drainpipe leading into it was observed; the base of the hole was not visible.

1.2.21 At the western boundary of A8, adjacent to the woodland outside the site boundary, elevated barrels and drums (likely rat traps) are present. Additionally, there are two isolated trees located in the central region of A8, and a third tree in the eastern area. A8 also contains two overhead power lines: one running east-west through the centre of the field, another running north-south along the southern boundary into A9, which is located north of A8.

1.2.22 Field A10 contains a north-south powerline with a single telegraph pole located within the field.

1.2.23 In the north-western area of A11, a small brick structure is present with a collapsed roof comprising possible asbestos-cement sheets. The structure sits atop a concrete slab, surrounded by a pile of soil, wood, and dead tree trunks. Additional material present included rusted farming equipment, and wooden debris (including planks and a wooden box). A11 also contains a footpath gate in the southern boundary.

1.2.24 Field A12 includes a pond on its eastern side, accompanied with a copse of trees.

1.2.25 Fields A1, A7 and A9 contain disturbed ground consisting of clay with oolitic limestone gravel.

1.2.26 All field boundaries comprised of hedgerows and tress unless specified above.

1.3 Conceptual Site Model and Preliminary Risk Assessment

Introduction

1.3.1 This section is aimed at identifying possible risks, if any, arising from substances used or deposited on-site, or from other sources of land

contamination. Both past and current potentially contaminative land uses have been considered. It is based on the proposed site scheme detailed in **ES Volume 1, Chapter 2: The Order Limits [EN010168/APP/6.1]** and **Chapter 3: The Scheme [EN010168/APP/6.1]**.

Assessment Framework

1.3.2 The risk assessment framework that will be used for this assessment is described in **Appendix 19-16: Preliminary Risk Assessment Approach and Methodology [EN010168/APP/6.3].**

Conceptual Site Model

1.3.3 The potential sources of contamination, potential pathways and receptors are described below.

Potential Contamination Sources

On Site:

S1: Potential made ground associated with the farmyard and barn or potential backfilled ponds.

S2. Possible small-scale spills/leaks of fuels associated with the agricultural use of the Site.

S3. Historic elevated pesticides and herbicides associated with the agricultural use of the Site.

Off-Site:

S4. Vehicle repair company located c. 170 m to the southeast.

S5. 'Old Quarries' located 150 m north and 175 m and 250 m to the southwest.

Potential Pathways

P1. Dermal contact, ingestion or inhalation of soil or dust.

P2. Inhalation of gases or vapours.

P3. Leaching and migration of contaminants in groundwater, including via preferential pathways.

P4. Direct contact with soils.

P5. Migration of explosive gases.

Potential Receptors

R1. Construction workers

R2. Future maintenance workers.

R3. Residential neighbours adjacent to the north.

R4. Surface waters including ponds and stream on Site and the River Avon 260 m to the north.

R5. The underlying Secondary A aquifer and SPZ 2.

R6. Infrastructure including solar panels, inverters, buried concrete and utilities including cables and any proposed water supply pipes.

R7. Public access including footpaths and bridleway.

Preliminary Risk Assessment

1.3.4 An initial Conceptual Site Model (iCSM) illustrating plausible contaminant linkages has been formulated for this site. The qualitative preliminary risk assessment of the possible linkages of the above sources (S1 to S3), transport pathways (P1 to P4) and receptors (R1 to R7) are provided in **Table 7**.

1.3.5 The level of risk is determined based on the current condition of the Site (i.e., the effects of mitigation measures are not included).

1.3.6 The preliminary risk assessment undertaken with in this section applies to the construction, operation, and decommissioning phases. The assessment focuses on chronic risks to future end users and off-site receptors. While acute risks to human health exposure for construction, maintenance, and decommissioning workers are considered, it is assumed that these linkages will be managed by appropriate health and safety measures as identified in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12], Outline Operation Environmental Management Plan (OEMP) [EN010168/APP/7.13],** and **Outline Decommissioning Strategy [EN010168/APP/7.14].**

1.3.7 S4, the ‘vehicle repair company’ to the southeast, has not been included in **Table 7** as there is no credible source-pathway-receptor linkage. The vehicle repair company is down topographical gradient from the Site.

Table 7: Potential Sources, Pathways and Receptors

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S1: Potential for localised made ground (MG) from infilled ponds, farmer's yard, barn and gate entrances	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R7:** Public access via footpaths and bridleway	Mild	Unlikely	Very Low	S1-P1-R7	Soils in top 0.5 m bgl potentially containing contaminants may impact the public via footpaths. Based on the information reviewed there are not considered to be any significant sources of contamination, and the exposure times would be limited. The risk will be lower post construction as unforeseen contamination encountered during the construction phase would be dealt with appropriately though a discovery strategy as detailed in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12]**. In addition, the Site will be subject to an appropriate planting scheme and there will be no bare areas for dust generation to create exposure.
	P3: Leaching and migration	**R5**: Secondary A Aquifer, SPZ 2	Mild	Low	Low	S1-P3-R5	Contaminants can be mobilised via shallow groundwater. Groundwater levels may be shallow, based on the streams beginning in the south of the Site. Given the anticipated geology groundwater is likely to be perched on cohesive layers, though piling to 12m bgl at substations could create a direct pathway to the Secondary Aquifer (cohesive, low-permeability strata at surface are approximately 10m thick). Any pollutants could reach the aquifer quickly and further migrate. However, the potential sources are considered to be isolated and minor and unlikely to present a risk to controlled waters.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
		R4: Surface waters	Minor	Low	Very Low	S1-P3-R4	Streams originate on the south of the Site flowing to a stream to the south of the Site. These are downgradient of potential sources therefore there is a potential risk of chemicals of potential concern flowing into the stream. However, the potential sources are considered to be isolated and minor and unlikely to present a risk to controlled waters.
	P2: Inhalation of gases or vapours	**R3:** Residential neighbours	Medium	Unlikely	Low	S1-P2-R3	made ground is anticipated to be of limited extent and generation potential. However, if a ground gas source was identified, this may pose a risk to off-site neighbours.
	P5: Migration of explosive gases	**R6:** Infrastructure including solar panels, inverters, buried concrete and water supply pipes.	Medium	Unlikely	Low	S1-P5-R6	If present, ground gas may build up within enclosed spaces and pose an explosive risk. However, made ground is anticipated to be of limited extent and low gas generation potential.
S2: Possible small-scale spills/leaks of fuels associated with the agricultural use of the Site	**P1**: Dermal contact ingestion or inhalation	**R7:** Public access via footpath and bridleway	Mild	Unlikely	Very Low	S2-P1-R7	Leaks or spills of fuel could adversely affect health. However, the likelihood of contact and limited exposure time suggests a very low potential risk to the public.
	P3: Leaching and Migration	**R4**: Surface waters	Mild	Low	Low	S2-P3-R4	Streams originate on the south of the Site flowing to a stream to the south of the Site. These are downgradient of potential sources therefore there is a potential risk of chemicals of potential concern flowing into the stream. However, the potential sources are considered to be isolated

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							and minor and unlikely to present a risk to controlled waters.
		R5: Secondary A aquifer, SPZ 2	Mild	Low	Low	S2-P3-R5	Contaminants can be mobilised via shallow groundwater. Groundwater levels may be shallow, based on the streams beginning in the south of the Site. Given the anticipated geology groundwater is likely to be perched on cohesive layers though piling to 12m bgl at substations could create a direct pathway to the Secondary Aquifer (cohesive, low-permeability strata at surface are approximately 10m thick). However, the potential sources are considered to be isolated and minor and unlikely to present a risk to controlled waters.
	P4: Direct contact	**R6**: Infrastructure including buried concrete and water supply pipes.	Mild	Unlikely	Very Low	S2-P4-R6	Water pipes not anticipated for the proposed site, although concrete could be present. Elevated sulphates may attack concrete.
	P5: Migration of explosive gases	**R6:** Infrastructure including solar panels, inverters, buried concrete and water supply pipes.	Medium	Unlikely	Low	S2-P5-R7	If present hydrocarbon spills are considered to be local and isolated and have low vapour generation potential.
S3: Historic use of elevated	**P1**: Dermal contact, ingestion or	**R7:** Public access via	Mild	Unlikely	Very Low	S3-P1-R7	Elevated pesticides and herbicides could cause adverse effects to health. However, the likelihood

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
pesticides and herbicides	inhalation of soil or dust	footpath and bridleway					of contact and limited exposure time suggests a very low potential risk to the public.
	P3: Leaching and Migration	**R4**: Surface waters	Mild	Low	Low	S3-P3-R4	Streams originate on the south of the Site flowing to a stream to the south of the Site. These are downgradient of potential sources therefore there is a potential risk of chemicals of potential concern flowing into the stream.
		R5: Secondary A aquifer, SPZ 2	Mild	Low	Low	S3-P3-R5	Contaminants can be mobilised via shallow groundwater. Groundwater levels may be shallow, based on the streams beginning in the south of the Site. Given the anticipated geology groundwater is likely to be perched on cohesive layers though piling to 12m bgl at substations could create a direct pathway to the Secondary Aquifer (cohesive, low-permeability strata at surface are approximately 10m thick). Excess herbicides and pesticides could reach the aquifer easily and further migrate.
S5: Potential for localised made ground (MG) from off-site 'Old Quarries'	**P5:** Migration of explosive gases	**R6:** Infrastructure including solar panels, inverters, buried concrete and water supply pipes.	Medium	Unlikely	Low	S5-P5-R6	If present ground gas may build up within enclosed infrastructure spaces and pose an explosive risk. However, made ground is anticipated to be of limited extent and low gas generation potential.

Discussion of Risk to Future Construction and Maintenance Workers and Off-Site Receptors

1.3.8 The Scheme will be undertaken in compliance with Construction Design and Management (CDM) Regulations 2015.

1.3.9 Prior to work commencing, a health and safety risk assessment will be carried out by the appointed Principal Contractor and developed in accordance with current health and safety regulations. This assessment will cover potential risks to construction staff, maintenance staff and the local population. Based on the findings of this risk assessment, appropriate mitigation measures will be implemented during the construction period or during operation and maintenance.

1.3.10 Acute risks to construction and maintenance workers will be managed by appropriate health and safety measures as identified in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12], Outline Operation Environmental Management Plan (OEMP) [EN010168/APP/7.13],** and **Outline Decommissioning Strategy [EN010168/APP/7.14].**

1.3.11 The greatest potential for generation of dust will be during the Site works and therefore dust generation will be kept to a minimum in accordance with general good practice, as outlined in, for example, 'Environmental Good Practice on Site', CIRIA Publication C692 to reduce this risk.

1.3.12 The risk to construction workers during the construction phase in terms of potential exposure to high concentrations of contaminants is considered to be low given the historic and current land uses identified at the Site.

1.3.13 Should gross contamination be identified during the construction phase, then this may pose a potential acute risk to construction works. It is likely to be able to be effectively managed through good health and safety practices and protocols. Adoption of appropriate dust suppression techniques would also mitigate the degree of potential particulate migration off-site.

1.3.14 Risks to maintenance workers will be mitigated through their employer health and safety risk assessments and will only be considered to be acute since occupational exposure (if any) would be of short duration.

1.4 Conclusions and Recommendations

Site Location

1.4.1 Lime Down A is located to the southeast of Sherston, Wiltshire at National Grid Reference 86308 84859.

Proposals

1.4.2 The Scheme at Lime Down A comprises ground-mounted solar photovoltaic (PV panels) with associated infrastructure such as inverters. No confined spaces are anticipated.

Site Description

1.4.3 Lime Down A comprises two parcels of land spanning either side of the road Bustler's Hill, including a roughly square piece of land to the east and a larger irregular shaped piece of land to the west. The Site is an area of agricultural land use with associated hedges, barn and farmyard over approximately 94 ha. A bridleway crosses through the centre of the western portion of the Site, from the northern boundary to the southern boundary, and a footpath runs through the eastern portion of the Site. An 11 kV overhead power line cuts through the south of the Site. The Site is generally flat, gently sloping from 120 m OD elevation in the northwest down to 115 m OD elevation in the south. The surrounding area is predominantly agricultural, with residential properties present off-site to the north and a vehicle repair company located c.170 m to the southeast of the Site.

Ecologically Sensitive Sites

1.4.4 An Ancient Woodland is present approximately 200 m away from the southern boundary.

Site History

1.4.5 The historical maps of the Site and surrounding area indicate that Lime Down A has been farmland since 1888, with a barn towards the north of the Site and a small area of hardstanding which has been used to store hale bails and farming equipment in the northeast of the Site. Ponds have been marked on historical maps of the Site that are no longer present, which may suggest these have been backfilled. Small areas within 250 m of the Site have been developed into residential property, with clusters appearing on the map in 1983. 'Old Quarries' have been recorded to the north and west of the Site.

Geology

1.4.6 The ground conditions are anticipated to comprise topsoil and Subsoil comprising lime-rich loamy and clayey soils with impeded drainage, overlying the Forest Marble Formation comprising mudstone with limestone beds. No superficial deposits are anticipated. The Forest Marble Formation is anticipated to be completely weathered to a clay near

surface. The depth to engineering strength rock is unknown, however, it is likely that engineering rockhead is shallow across the Site. Localised areas of made ground may be encountered, associated with the barn, farmyard and potentially backfilled ponds.

Geohazards

1.4.7 Negligible to low risk geohazard risk has been typically identified at Lime Down A. A moderate risk has been identified for shrink-swell potential of shallow clays (weathered mudstone). The Site is not in a mining area or mineral safeguarding area, however, historical quarries have been recorded off-site.

Hydrogeology

1.4.8 Shallow groundwater may be encountered, perched on the low permeability cohesive soils anticipated beneath the Site. The Forest Marble Formation is designated as a Secondary A aquifer with high vulnerability and within a Source Protection Zone 2, outer catchment zone. There are no licensed groundwater abstractions recorded in the vicinity of the Site. Flooding from groundwater has been recorded as unlikely at the Site.

Hydrology

1.4.9 There are two ponds in the north of the Site and two streams in the south of the Site. The two streams flow south to a registered watercourse located approximately 120 m to the south of the Site, flowing in an easterly direction. The River Avon is located 260 m to the North of the Site at its closest point, flowing in an easterly direction. The Site is within the catchments of the Sherston Avon River water body, of poor ecological status and the Sherston Avon tributary, of good ecological status. No licensed surface water abstractions have been identified within 1 km of the site. The Site is in Flood Zone 1, low probability of fluvial and marine flooding.

Contaminated Land

1.4.10 On Site, there is potential for ponds to have been backfilled or made ground associated with farming activities to be encountered. Off-site, a vehicle repair garage is c.170 m to the southeast of the Site. One registered pollution incident was recorded 170 m to the east of the Site in September 2005, from vehicle waste with no impact on water, minor impact on land, and significant impact on air. No landfills, petrol stations or any other past or present contaminative uses have been recorded on or in the vicinity of Lime Down A. No current discharge consents are present

within the vicinity of the Site. Off-site quarries have been identified with three historical opencast clay and shale quarries to the north and west of the Site.

Preliminary Risk Assessment Conclusions

1.4.11 An iCSM was developed to identify any credible source-pathway-receptor linkages. It is considered that there is no pathway from the off-site vehicle repair garage being topographically lower than the Site, leaving only subsurface migration via the Secondary A aquifer which if occurring, is not within the scope of the assessment for this development. There is no pathway to residential receptors to the north of the Site, being uphill and due to the underlying cohesive deposits. Given the nature of the proposed solar photovoltaic panels and the existing greenfield site, there is considered to be typically a very low to low risk from contaminated land to human health. The risk to controlled water receptors, particularly the underlying Secondary A aquifer, is increased by the proposed use of piled foundations at substation sites potentially creating preferential pathways. However, while there may be unforeseen ground conditions or contamination from the farmyard, barn or possible infilled ground such as former ponds, there is no indication that specific sources of contamination exist in the vicinity of the substation. Therefore, these risks are unlikely to pose a material risk to the scheme.

Preliminary Geotechnical Considerations

1.4.12 The ground conditions including the strength of shallow soils and the depth to engineering rockhead and groundwater is unknown for the Site. However, where rockhead and groundwater is encountered, i.e. in the use of piled foundations, this may cause engineering difficulties. Clays of moderate to high volume change potential are anticipated at the Site. This will be confirmed by a ground investigation to inform appropriate foundation design prior to the construction phase.

Recommendations

1.4.13 Whilst the risk from the Scheme is low, it may be prudent to confirm the conceptual site model with a ground investigation prior to the construction phase The need for any investigation has been considered in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12]**The soils and groundwater in the vicinity of the historic barn, farmyard and ponds on Lime Down A will be targeted and analysed for a suite of common contaminants. If any significant sources of made ground are encountered through the Discovery and Inspection Strategy, ground gas monitoring is recommended, as considered in the

Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12]. A ground investigation to inform a geotechnical appraisal including characterisation of the ground conditions and shrink-swell potential of the shallow underlying strata and groundwater levels will also be carried out to support the detailed design. Where piled foundations are required for the installation of substations, a piling risk assessment in line with the CL:AIRE guidance document *Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention (CL:AIRE, 2025, originally published by the Environment Agency, 2001*), should be produced ahead of any construction activity.

Published 1888

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

DeltaSimons

Wiltshire

Published 1900

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

DeltaSimons

Wiltshire

Published 1888 - 1889

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

DeltaSimons

Gloucestershire

Published 1938

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

Contents

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Agency & Hydrological			
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes
Contaminated Land Register Entries and Notices			
Discharge Consents	pg 3		5
Prosecutions Relating to Controlled Waters			n/a
Enforcement and Prohibition Notices			
Integrated Pollution Controls			
Integrated Pollution Prevention And Control			
Local Authority Integrated Pollution Prevention And Control			
Local Authority Pollution Prevention and Controls			
Local Authority Pollution Prevention and Control Enforcements			
Nearest Surface Water Feature		Yes	
Pollution Incidents to Controlled Waters			
Prosecutions Relating to Authorised Processes			
Registered Radioactive Substances			
River Quality	pg 4	1	
River Quality Biology Sampling Points			
River Quality Chemistry Sampling Points			
Substantiated Pollution Incident Register			
Water Abstractions			
Water Industry Act Referrals			
Groundwater Vulnerability Map	pg 4	Yes	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 9	8	n/a
Bedrock Aquifer Designations	pg 10	Yes	n/a
Superficial Aquifer Designations	pg 10	Yes	n/a
Source Protection Zones	pg 10	2	
Extreme Flooding from Rivers or Sea without Defences	pg 10	Yes	
Flooding from Rivers or Sea without Defences	pg 10	Yes	
Areas Benefiting from Flood Defences			
Flood Water Storage Areas			
Flood Defences			
OS Water Network Lines	pg 10	8	12

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Waste			
BGS Recorded Landfill Sites			
Historical Landfill Sites			
Integrated Pollution Control Registered Waste Sites			
Licensed Waste Management Facilities (Landfill Boundaries)			
Licensed Waste Management Facilities (Locations)			
Local Authority Landfill Coverage	pg 14	2	n/a
Local Authority Recorded Landfill Sites			
Registered Landfill Sites			
Registered Waste Transfer Sites			
Registered Waste Treatment or Disposal Sites			
Hazardous Substances			
Control of Major Accident Hazards Sites (COMAH)			
Explosive Sites			
Notification of Installations Handling Hazardous Substances (NIHHS)			
Planning Hazardous Substance Consents			
Planning Hazardous Substance Enforcements			
Geological			
BGS 1:625,000 Solid Geology	pg 15	Yes	n/a
BGS Recorded Mineral Sites	pg 15	1	1
CBSCB Compensation District			n/a
Coal Mining Affected Areas			n/a
Mining Instability			n/a
Man-Made Mining Cavities			
Natural Cavities			
Non Coal Mining Areas of Great Britain			
Potential for Collapsible Ground Stability Hazards	pg 15	Yes	
Potential for Compressible Ground Stability Hazards	pg 15	Yes	
Potential for Ground Dissolution Stability Hazards	pg 15	Yes	Yes
Potential for Landslide Ground Stability Hazards	pg 16	Yes	Yes
Potential for Running Sand Ground Stability Hazards	pg 16	Yes	Yes
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 17	Yes	Yes
Radon Potential - Radon Affected Areas	pg 17	Yes	n/a
Radon Potential - Radon Protection Measures			n/a

Contents

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Agency & Hydrological			
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes
Contaminated Land Register Entries and Notices			
Discharge Consents	pg 1		1
Prosecutions Relating to Controlled Waters			n/a
Enforcement and Prohibition Notices			
Integrated Pollution Controls			
Integrated Pollution Prevention And Control			
Local Authority Integrated Pollution Prevention And Control			
Local Authority Pollution Prevention and Controls			
Local Authority Pollution Prevention and Control Enforcements			
Nearest Surface Water Feature	pg 1	Yes	
Pollution Incidents to Controlled Waters			
Prosecutions Relating to Authorised Processes			
Registered Radioactive Substances			
River Quality	pg 1		2
River Quality Biology Sampling Points			
River Quality Chemistry Sampling Points			
Substantiated Pollution Incident Register	pg 1		1
Water Abstractions			
Water Industry Act Referrals			
Groundwater Vulnerability Map	pg 1	Yes	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 5	8	n/a
Bedrock Aquifer Designations	pg 5	Yes	n/a
Superficial Aquifer Designations	pg 5	Yes	n/a
Source Protection Zones	pg 6	4	
Extreme Flooding from Rivers or Sea without Defences	pg 6	Yes	Yes
Flooding from Rivers or Sea without Defences	pg 6	Yes	Yes
Areas Benefiting from Flood Defences			
Flood Water Storage Areas			
Flood Defences			
OS Water Network Lines	pg 6	3	9

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Waste			
BGS Recorded Landfill Sites			
Historical Landfill Sites			
Integrated Pollution Control Registered Waste Sites			
Licensed Waste Management Facilities (Landfill Boundaries)			
Licensed Waste Management Facilities (Locations)			
Local Authority Landfill Coverage	pg 8	2	n/a
Local Authority Recorded Landfill Sites			
Registered Landfill Sites			
Registered Waste Transfer Sites			
Registered Waste Treatment or Disposal Sites			
Hazardous Substances			
Control of Major Accident Hazards Sites (COMAH)			
Explosive Sites			
Notification of Installations Handling Hazardous Substances (NIHHS)			
Planning Hazardous Substance Consents			
Planning Hazardous Substance Enforcements			
Geological			
BGS 1:625,000 Solid Geology	pg 9	Yes	n/a
BGS Recorded Mineral Sites	pg 9		3
CBSCB Compensation District			n/a
Coal Mining Affected Areas			n/a
Mining Instability			n/a
Man-Made Mining Cavities			
Natural Cavities			
Non Coal Mining Areas of Great Britain			
Potential for Collapsible Ground Stability Hazards	pg 9	Yes	
Potential for Compressible Ground Stability Hazards			
Potential for Ground Dissolution Stability Hazards	pg 9		Yes
Potential for Landslide Ground Stability Hazards	pg 10	Yes	Yes
Potential for Running Sand Ground Stability Hazards	pg 10		Yes
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 10	Yes	Yes
Radon Potential - Radon Affected Areas			n/a
Radon Potential - Radon Protection Measures			n/a

Summary

Data Type	Page Number	On Site	0 to 250m (*up to 500m)

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Agency & Hydrological			
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes
Contaminated Land Register Entries and Notices			
Discharge Consents			
Prosecutions Relating to Controlled Waters			n/a
Enforcement and Prohibition Notices			
Integrated Pollution Controls			
Integrated Pollution Prevention And Control			
Local Authority Integrated Pollution Prevention And Control			
Local Authority Pollution Prevention and Controls			
Local Authority Pollution Prevention and Control Enforcements			
Nearest Surface Water Feature	pg 3	Yes	
Pollution Incidents to Controlled Waters			
Prosecutions Relating to Authorised Processes			
Registered Radioactive Substances			
River Quality	pg 3	2	
River Quality Biology Sampling Points			
River Quality Chemistry Sampling Points			
Substantiated Pollution Incident Register			
Water Abstractions	pg 4		(*4)
Water Industry Act Referrals			
Groundwater Vulnerability Map	pg 5	Yes	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 13	13	n/a
Bedrock Aquifer Designations	pg 14	Yes	n/a
Superficial Aquifer Designations	pg 14	Yes	n/a
Source Protection Zones	pg 14	4	
Extreme Flooding from Rivers or Sea without Defences	pg 14	Yes	
Flooding from Rivers or Sea without Defences	pg 15	Yes	
Areas Benefiting from Flood Defences			
Flood Water Storage Areas			
Flood Defences			
OS Water Network Lines	pg 15	10	26

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Waste			
BGS Recorded Landfill Sites			
Historical Landfill Sites			
Integrated Pollution Control Registered Waste Sites			
Licensed Waste Management Facilities (Landfill Boundaries)			
Licensed Waste Management Facilities (Locations)			
Local Authority Landfill Coverage	pg 20	2	n/a
Local Authority Recorded Landfill Sites			
Registered Landfill Sites			
Registered Waste Transfer Sites			
Registered Waste Treatment or Disposal Sites			
Hazardous Substances			
Control of Major Accident Hazards Sites (COMAH)			
Explosive Sites			
Notification of Installations Handling Hazardous Substances (NIHHS)			
Planning Hazardous Substance Consents			
Planning Hazardous Substance Enforcements			
Geological			
BGS 1:625,000 Solid Geology	pg 21	Yes	n/a
BGS Recorded Mineral Sites			
CBSCB Compensation District			n/a
Coal Mining Affected Areas			n/a
Mining Instability			n/a
Man-Made Mining Cavities			
Natural Cavities			
Non Coal Mining Areas of Great Britain			
Potential for Collapsible Ground Stability Hazards	pg 21	Yes	
Potential for Compressible Ground Stability Hazards	pg 21	Yes	Yes
Potential for Ground Dissolution Stability Hazards	pg 21	Yes	Yes
Potential for Landslide Ground Stability Hazards	pg 22	Yes	Yes
Potential for Running Sand Ground Stability Hazards	pg 22	Yes	Yes
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 23	Yes	
Radon Potential - Radon Affected Areas	pg 24	Yes	n/a
Radon Potential - Radon Protection Measures			n/a

Summary

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Industrial Land Use			
Contemporary Trade Directory Entries	pg 25		1
Fuel Station Entries			
Gas Pipelines			
Underground Electrical Cables			
Sensitive Land Use			
Ancient Woodland	pg 26	3	1
Areas of Adopted Green Belt			
Areas of Unadopted Green Belt			
Areas of Outstanding Natural Beauty			
Environmentally Sensitive Areas			
Forest Parks			
Local Nature Reserves			
Marine Nature Reserves			
National Nature Reserves			
National Parks			
Nitrate Sensitive Areas			
Nitrate Vulnerable Zones			
Ramsar Sites			
Sites of Special Scientific Interest			
Special Areas of Conservation			
Special Protection Areas			
World Heritage Sites

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Agency & Hydrological			
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes
Contaminated Land Register Entries and Notices			
Discharge Consents			
Prosecutions Relating to Controlled Waters			n/a
Enforcement and Prohibition Notices			
Integrated Pollution Controls			
Integrated Pollution Prevention And Control			
Local Authority Integrated Pollution Prevention And Control			
Local Authority Pollution Prevention and Controls			
Local Authority Pollution Prevention and Control Enforcements			
Nearest Surface Water Feature	pg 3	Yes	
Pollution Incidents to Controlled Waters			
Prosecutions Relating to Authorised Processes			
Registered Radioactive Substances			
River Quality	pg 3	1	
River Quality Biology Sampling Points			
River Quality Chemistry Sampling Points			
Substantiated Pollution Incident Register			
Water Abstractions	pg 4		(*1)
Water Industry Act Referrals			
Groundwater Vulnerability Map	pg 4	Yes	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 13	13	n/a
Bedrock Aquifer Designations	pg 14	Yes	n/a
Superficial Aquifer Designations	pg 14	Yes	n/a
Source Protection Zones	pg 15	4	
Extreme Flooding from Rivers or Sea without Defences	pg 15	Yes	
Flooding from Rivers or Sea without Defences	pg 15	Yes	
Areas Benefiting from Flood Defences			
Flood Water Storage Areas			
Flood Defences			
OS Water Network Lines	pg 15	21	14

Data Type	Page Number	On Site	0 to 250m (*up to 500m)
Waste			
BGS Recorded Landfill Sites			
Historical Landfill Sites			
Integrated Pollution Control Registered Waste Sites			
Licensed Waste Management Facilities (Landfill Boundaries)			
Licensed Waste Management Facilities (Locations)			
Local Authority Landfill Coverage	pg 20	2	n/a
Local Authority Recorded Landfill Sites			
Registered Landfill Sites			
Registered Waste Transfer Sites			
Registered Waste Treatment or Disposal Sites			
Hazardous Substances			
Control of Major Accident Hazards Sites (COMAH)			
Explosive Sites			
Notification of Installations Handling Hazardous Substances (NIHHS)			
Planning Hazardous Substance Consents			
Planning Hazardous Substance Enforcements			
Geological			
BGS 1:625,000 Solid Geology	pg 21	Yes	n/a
BGS Recorded Mineral Sites			
CBSCB Compensation District			n/a
Coal Mining Affected Areas			n/a
Mining Instability			n/a
Man-Made Mining Cavities			
Natural Cavities			
Non Coal Mining Areas of Great Britain			
Potential for Collapsible Ground Stability Hazards	pg 21	Yes	Yes
Potential for Compressible Ground Stability Hazards	pg 21	Yes	Yes
Potential for Ground Dissolution Stability Hazards	pg 21	Yes	Yes
Potential for Landslide Ground Stability Hazards	pg 22	Yes	Yes
Potential for Running Sand Ground Stability Hazards	pg 22	Yes	Yes
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 23	Yes	Yes
Radon Potential - Radon Affected Areas			n/a
Radon Potential - Radon Protection Measures			n/a

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
