Appendix 19-7: Lime Down Central Corridor, Phase 1 Desk Study, Conceptual Site Model and Preliminary Risk Assessment

1.1 Introduction

1.1.1 Geosyntec Consultants Limited (Geosyntec) was commissioned by the Applicant prepare the Ground Conditions chapter of the Environmental Statement (ES) for the Scheme. The PV and BESS infrastructure would be located across five land parcels (Lime Down A–E), collectively known as the Solar PV Sites. **Appendix 19-16: Preliminary Risk Assessment Approach and Methodology [EN010168/APP/6.3]** presents the Phase 1 desk study information to allow the development of the initial Conceptual Site Model (CSM) and Preliminary Risk Assessment (PRA) to inform the baseline for **ES Volume 1, Chapter 19: Ground Conditions [EN010168/APP/6.1]**.

Sources of Information

1.1.2 This report has been prepared using a combination of published records (e.g., British Geological Survey (BGS), Environment Agency, Defra) and information provided by the Applicant. These include statutory records and historical mapping supplied within a Groundsure Report, published geological and hydrogeological mapping and historical borehole records.

1.1.3 Specific information sources are referenced throughout the document and are summarised in **Table 1** below. Copies of historical mapping can be found in Annex 19-7-1.

1.2 Site Context

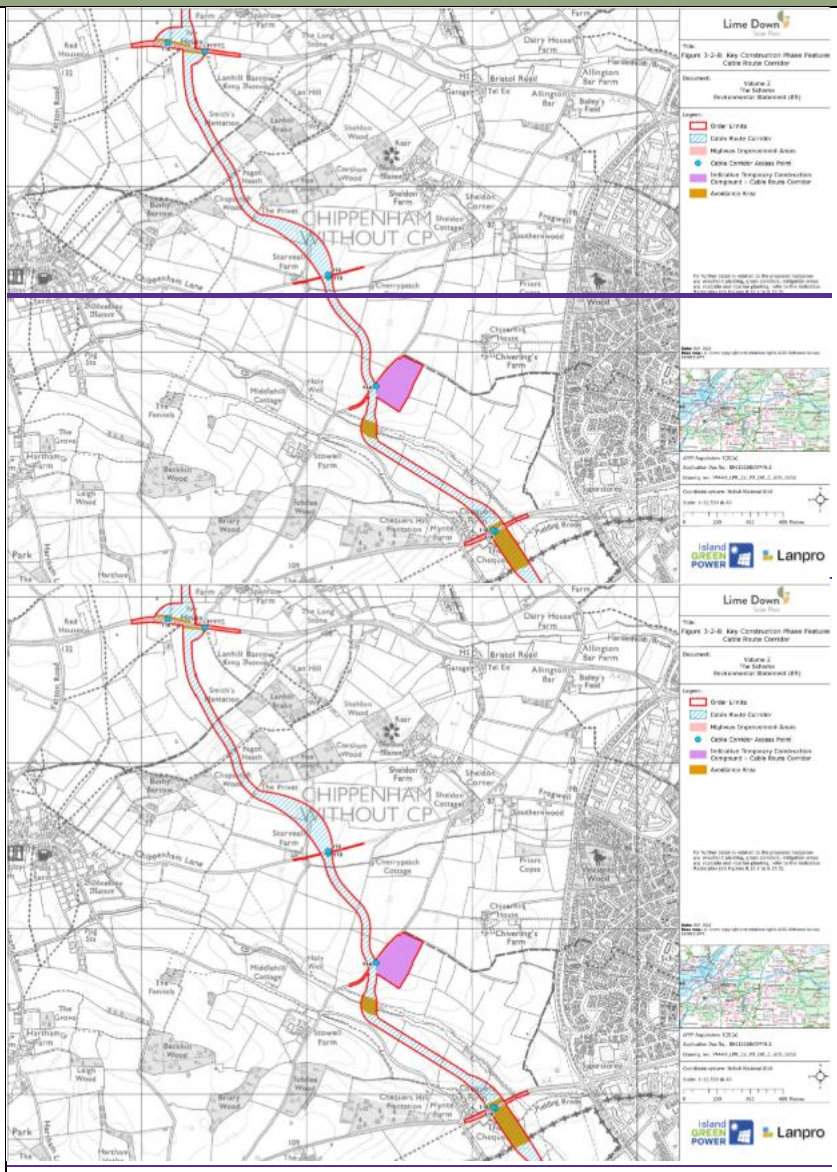

Site Location and Description

1.2.1 The Site location and description for the Central Corridor are included in **Table 2** below.

Table 2: Site Location and Description

Site Location and Description	
Site Location	Land to the south of the M4 and to the north of the A4, west of Chippenham and east of Yatton Keynall in Wiltshire.

Site Location and Description	
	

Site Location and Description	
	
Site Description	The cable corridor route comprises an irregular shaped piece of approximately 7 km length. The Site is predominantly agricultural comprising fields, hedges and trees including pockets of woodland and sporadic ponds and ditches/streams. An unnamed commercial/industrial property off an access road to Broomfield and Cherrypatch Cottage off Chippenham Lane is included within the Site boundaries.
Infrastructure	There are several road crossings including the Sevington, access road to Broomfield House, Cromhall Lane, Coldharbour, A420, Chippenham Lane and Bath Road (A4). There are several footpaths across the Site. There is a public footpath from Sevington House to Broomfield House and Farm in the northeast of the Site, to

Site Location and Description	
	the east near Park Farm, two from Yatton Keynell in the west to Kington St Michael in the east, to the south of the A420, two at the bottom and top of Fagot Heath, and in the south of the Site. There are several utilities along the central corridor route including but not limited to overhead electricity pylons, telecoms and water pipes along roads and a gas main which crosses Cromhall Lane.
Topography	The Site generally falls gently from 125 m above Ordnance Datum (AOD) in the northwest, down to 65 m AOD at Bath Road in the southeast, with Fagot Heath rising up to 134 m AOD towards the center of the Site.
Adjacent and Surrounding Land Use (pertinent features)	North: M4 with agricultural land beyond and a woodland named Sevington Covert.
	East: Predominantly agricultural land with Broomfield residential properties and farm to the northeast, Grove Farm, woodland (Lanhill Brake and Fox Covert), solar farm, Greenacres Farm, Fowlswick Cottages, Fir Tree Farm and Sparrow Farm, Lanhill Barrow, Sheldon Corner including Farm and business park and West Cephan Way with commercial properties beyond to the southeast.
	South: A4 Bath Road with agricultural land beyond.
	West: Predominantly agricultural land with a commercial/industrial property to the very northwest, Rathill Cottages, Park Farm, Springfield Farm and water tower reservoir, Yatton Keynell village, Golf driving range, woodland (Chapscroft Wood) and Starveall Farm to the southwest.

Historical Setting

1.2.2 Historical Ordnance Survey (OS) maps of the Site and the wider environs were provided in the Groundsure Report (scales 1:10,000 and 1:10,560) and viewed from Google Earth Pro and these are reviewed in this section. Copies of these maps are presented as Annex 19-7-1.

1.2.3 The historical Ordnance Survey (OS) maps obtained with the Groundsure report date between 1885 and 2024.

1.2.4 **Table 3** presents a summary of the main features present on and within approximately 250 m radius of the Site boundary. Geosyntec notes that only indicative map scales are provided. Where dates are stated, these refer to the dates of maps on which the features are present, have changed use or are no longer annotated, and do not necessarily refer to the exact dates of existence of a particular feature. Development that may have occurred between map editions is recorded as occurring on the latter published map, hence there are

some limitations to the accuracy to the date of development unless supplementary evidence is available.

Table 3: Summary of Historical Uses

Historical Use of Site and Surroundings		
On-site	1885-6	Agricultural land comprising several fields, hedges and a number of small ponds and ditches/streams and roads. A cottage is present near Sheldon Corner. The southern border is marked by Bath Road. Footpaths cross the Site at several locations.
	1899-1901	A well is recorded at the cottage. Owls Grove now named Fagot Heath. Spring no longer shown.
	1921-1923	A Spring is recorded adjacent to Sparrow Farm. Rises are now labelled on site, in the vicinity of Bristol Road and to the south of the Site.
	1949	M4 now constructed along the northern boundary, including cuttings and embankments.
	1977	Layby has been built on Bristol Road. Overhead electricity pylons are now shown.
	1980	Pond near Rathill Cottages no longer marked.
	1993-1994	Circular feature shown were spring was historically shown near Chapscroft Wood.
	2001	No significant changes.
	2010	No significant changes.
	2024	No significant changes.
Off-site (within 250 m)	1885	Predominantly agricultural land with sporadic cottages and farms and Yatton Keynell village. Fish Ponds, pump and Boat House are present in the north, adjacent to Sevington Farm, well, residential properties and school. A footbridge and well is labelled at Broomfield. Frequent wells are recorded. 'Holy Well' is recorded to the southwest. Footbridge is present near Lanhill Barrow. Quarries are present to the north of Cromhall Lane and at Springfield House. Pudding Brook is to the south of the Site.
	1899-1901	Allotments are present to the northeast. Quarry and Rises are marked at Broomfield. Quarry to the northeast is no longer marked. Quarry marked to the southwest.
	1922-1923	Pumping Station and sheep wash recorded at the Ponds at Sevington Farm. Allotments are present to the south of Yatton Keynell. Rises are labeled at Sheldon Corner. Quarry to the southwest now labelled 'Old Limekiln'. A new quarry is present to the north.
	1949	A Water Tower is now shown at Springfield House.
	1977	Holy Well is referenced as Issues.

Historical Use of Site and Surroundings		
	1980	Yatton Keynell has extended including Garage and residential properties to the north and an electricity substation where the Allotments were. Fir Tree Farm and Villas have been constructed opposite Sparrow Farm to the east of the Site and the Spring is no longer labelled.
	1994	No significant changes.
	2001	Bull Stud labelled to the east at Sheldon Corner.
	2010	Bodies of water are marked at the northwest boundary. Golf Driving range is present where the electricity substation was at Yatton Keynell. Greenacre Farm has been constructed to the east. Fowlswick Farm has been extended with Fowleswick Industrial Estate. Bull Stud now labelled Sheldon Business Park.
	2024	Warehouses constructed at the northwest boundary.

1.2.5 The maps show that Lime Down Central Corridor has been farmland since the earliest available in 1885, with Sevington Farm, well, school, Fish Ponds and Boat House present in the north and Cherrypatch Cottage to the centre of the Site. The M4 was constructed by 1949 edition map. Several ponds and a spring later shown as a circular depression are recorded between Chapscroft Wood and Fagot Heath. In the surrounding area, several farms, residential properties, wells and quarries have been located in the area. A water tower was constructed by 1949. An electricity sub-station was present to the west from 1980 and no longer labelled by the 2010 edition map. Industrial and business parks have been more recently developed to the east and northwest of the Site. Quarries have been recorded adjacent to the Site.

Physical and Environmental Setting

1.2.6 The physical setting including the topography, geology, hydrogeology and hydrology are the key factors that influence the way in which contaminants in the soil or groundwater can be transported on or off site, and also the way in which contamination can affect applicable receptors including controlled waters and users of the Site.

1.2.7 The physical and environmental setting of the Site, in **Table 4** and **Table 5** below, has been assessed by making reference to the information sources detailed in Table 1: Sources of Information.

Table 4: Summary of Characteristics

Physical Setting	
Anticipated Ground Conditions, Geology and Geohazards	
	Anthropogenic Strata – made ground or backfill:

Physical Setting	
Geology	Made ground is not recorded on the BGS Mapping for the Site. However, there may be made ground associated with historical land uses such as, agricultural activities, field entrances and roads.
	Soils: The soils anticipated on the Site are shallow lime-rich loamy soils over limestone or lime-rich and clayey soils with impeded drainage. Further information is contained within ES Volume 1, Chapter 17: Soils and Agriculture, [EN01068/APP/6.1].
	Superficial Geology: Superficial Deposits are absent from most of the Site. Alluvium is present in a localised area adjacent to Cromhall Lane and at the very southern boundary, along the A4.
	Solid Geology: The Site is underlain by Kellaways Formation, Cornbrash Formation and Forest Marble Formation. The Kellaways Formation comprises grey sandstone, siltstone and mudstone and the Kellaways Clay Member (mudstone) is indicated at the Site. The Cornbrash Formation comprises bluish grey limestone. The Forest Marble Formation comprises greenish grey mudstone with lenticular typically cross-bedded and shelly limestone units. The depth to engineering rockhead is unknown, however, it is anticipated that the upper stratum will be completely weathered to a clay, becoming rock strength at relatively shallow depths.
	Geological Structures: There are three geological faults across the Site, generally in an east-northeast to west-southwest orientation. The ~~most northern~~northernmost fault is located at Broomfield, followed by a fault at Cromhall Lane which are downthrown to the north. The Corsham Fault is adjacent to the southern boundary, downthrown to the south. There is also a fault along the southwestern boundary in a northwest to southeast orientation. The solid geology is indicated to dip down to the southeast.
	Borehole Records: There are eight BGS boreholes are recorded on Site. Most of the borehole in the vicinity of the Site are located along the M4 and West Cephan Way. The boreholes indicate 0.6 m to 2.6 m of firm to stiff silty clay with rare clayey sand band, overlying limestone and mudstone. Limestone

<table>
<tr><th colspan="3">Physical Setting</th></tr>
<tr><td></td><td colspan="2">boulders were recorded in one log at the M4 from 0.2 m bgl, however, it is likely that limestone engineering rock is interbedded with mudstone which has weathered to a clay given that there are no superficial deposits anticipated at this location.</td></tr>
<tr><td rowspan="7">Geohazards</td><td>Hazard Type</td><td>Hazard Potential</td></tr>
<tr><td>Collapsible Ground</td><td>Negligible to very low</td></tr>
<tr><td>Compressible Ground</td><td>Negligible or moderate (Alluvium)</td></tr>
<tr><td>Ground Dissolution</td><td>Negligible to moderate (feather edge of the Kellaways Clay Member over Cornbrash Formation at Fagot Heath)</td></tr>
<tr><td>Landslide</td><td>Very low to moderate (topographical high, Fagot Heath)</td></tr>
<tr><td>Running Sand</td><td>Negligible to low</td></tr>
<tr><td>Shrinking or Swelling Clay</td><td>Negligible to moderate (Kellaways Clay Member)</td></tr>
<tr><td>Ground Cavities and Sinkholes</td><td colspan="2">There are four records of karst (ground cavities and sinkholes) within 500m of the Site, which relate to the Forest Marble Formation at West Sevington Farm to the northwest and at the feather edge of the Kellaways Clay Member, overlying the Corsham Formation at Corsham Wood to the southeast.

It is noted that there is a low risk designated for ground dissolution where four records of karst have been identified within 500m. There is a moderate risk which corresponds to the feather edge of the Kellaways Clay Member at higher elevations, down dip of bedding and at higher slope gradients which may result in high surface water flow. There are several ponds and a spring which was later shown as a possible depression identified in this area on the historical maps, however, not identified on current OS maps.</td></tr>
<tr><td>Radon</td><td colspan="2">The Site is typically within an area of less than <1% radon potential. Where Alluvium is present, between 1% and 3% radon potential is identified.</td></tr>
<tr><td>Coal Mining</td><td colspan="2">The ~~Coal~~Mining Remediation Authority interactive map viewer shows that the Site is not within a Coal Mining Reporting Area, and therefore is not in a Development High Risk Area. No Coal Mining Risk Assessment (CMRA) is considered necessary.</td></tr>
<tr><td>Non-Coal Mining/Minerals</td><td colspan="2">Historical underground rock mining is present south of the Central Cable Corridor with the high risk area being identified south of the MLN1 trainline. The commodity extracted was ‘Bath Freestone’ which is understood to be worked from 1872 by pillar and stall methods at depths of 29 m below ground level (bgl). Four underground mines lie adjacent to the Site: Monks Park/The Ridge, Eastlays Mine, Goodes Mine and Elm Park. Further information can be found within the Mining Risk Assessment [EN010168/APP/6.3].

The Groundsure report identifies four BritPit records within 250 m which correspond to limestone Quarries identified on the historical OS maps which have now ceased.</td></tr>
</table>

Physical Setting	
	There is one record of mining cavities, located 931 m northwest at Yatton Keynell for limestone. There are 12 recorded surface ground workings on the Site. The workings relate to the M4, fish ponds in the north, ponds and an unspecific pit to the very northeast and quarry on Site.
Evidence of Land Contamination	A site walkover has not been carried out.
Hydrogeology	
Aquifer Designation	The Alluvium is designated a Secondary A aquifer. The Cornbrash Formation and Forest Marble Formation are designated as a Secondary A aquifer. The Kellaways Clay Member is unproductive. -The limestones of the underlying Great Oolite Group are a Principal Aquifer.
Groundwater Vulnerability	Secondary A bedrock aquifers are stated as being high vulnerability. The groundwater bodies have a good chemical rating.
Source Protection Zone Status	The Site is within a Source Protection Zone 2 (SPZ2)– outer catchment and Zone 3 – total catchment.
Licensed Groundwater Abstraction	A review of the Groundsure report and information received from Wiltshire Council indicate there is one active licensed groundwater abstraction license recorded within 2000 m of the Site~~,~~. The abstraction is located 457 m northwest at Brooms Farm for general use.
Local Authority Registered Private Water Supply Abstractions	Wiltshire Council were contacted for information on private water supply abstractions. There are no recorded private water supplies on or within 100 m of the Site.
Groundwater Flooding Potential	Flooding from groundwater is typically negligible to low on Site, with moderate to high risk recorded at Sevington, Fowlswick and Bath Road (A4).
Hydrology	
Surface Water Courses and Drainage	The Groundsure report identifies 188 water bodies within 250 m. In summary, there is a pond and a stream in the north of the Site, a stream/ditch to the north of Fir Tree Farm, a ditch along the A420, a stream/ditch to the north of Cherrypatch Cottage and in the southeast and along the southwest of the Site for tributaries to Pudding Brook. From the Ordnance Survey plans there are a number of small ponds on the Site, not identified on the Groundsure plan, possibly due to scale.
Catchment Information	The Site is within five surface water catchments, including Pudding Brook, Avon, By Brook, Rodbourne Brook and Sutton Benger Brook. Pudding Brook and Sutton Benger Brook have a good ecological rating whereas By Brook, Avon and Rodbourne Brook have a moderate rating.
Licensed Surface Water Abstractions	A review of the Groundsure report and information received from Wiltshire Council indicate no Licensed Surface Water Abstractions have been identified within 2 km of the site.

Physical Setting	
Local Authority Registered Surface Water Abstractions	Wiltshire Council were contacted for information on private water supply abstractions. There are no recorded public water supplies on or within 100 m of the Site.
Risk of Flooding from Surface Waters	There is a moderate to high risk of flooding in the very north of the Site, adjacent to the M4 and moderate along the southwest and south of the Site associated with Pudding Brook. Refer to **ES Volume 1, Chapter 11: Hydrology, Flood Risk and Drainage [EN01068/APP/6.1]** for additional detail.

Table 5: Summary of Environmental Information

Environmental Setting	
Protected Areas	
Sensitive Sites (within 250m)	**Protected Woodland:** Ancient Woodland is present in the vicinity of the Site with Chapscroft Wood being directly adjacent to the Site. Deciduous woodland priority habitat is located towards the centre and adjacent to the Site. **SSSI/SPA/SAC etc:** The Site is adjacent to the Cotswolds Area of Outstanding Natural Beauty (AONB). Refer to **ES Volume 1, Chapter 9: Ecology and Biodiversity [EN01068/APP/6.1]** and **ES Volume 1, Chapter 10: Arboriculture [EN01068/APP/6.1]** for additional detail.
Cultural Heritage	There are 25 records of Grade II listed buildings in the vicinity of the Site. Sevington and Yatton Keynell are conservation areas. The medieval settlement of Sheldon is 56 m to the south and Lanhill Barrow is recorded 234 m to the south of the Site. Refer to ES Volume 1, Chapter 12 Cultural Heritage **[EN01068/APP/6.1]** for additional detail.
Other	
Asbestos	No asbestos surveys are available for the Site. Note that it is common for buried asbestos to be found on farmland or in spoil bunds. The Discovery and Inspection Strategy within the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12]**, contains a procedure for addressing unexpected contamination.

Invasive Plants	No ecological report has been made available at this stage. Detailed information is contained within **ES Volume 1, Chapter 9: Ecology and Biodiversity [EN01068/APP/6.1]**
Unexploded Ordnance	Zetica UXO maps show a low risk of unexploded ordnance.
Nitrate Vulnerability	The Site is located in a nitrate vulnerable zone.

Regulated Activities

1.2.8 The key relevant features that characterise the Site and surrounding area are summarised in this section, along with an indication of the risk to the land quality of the Site.

1.2.9 Information on groundwater and surface water abstractions is detailed in above sections and is not repeated here.

1.2.10 Generally, any regulated activities, i.e. those covered by national legislation to control industrial emissions such as the Environmental Permitting Regulations 2016, within 250 m of the Site could, depending upon their nature, represent potential off-site sources of contamination. Typically, at distances greater than 250 m risks are not likely to be unacceptable with respect to the site development.

Regulated Processes

1.2.11 **Table 6** summarises information on regulated processes contained in the Groundsure report (Annex 19-1-2). The report collates data from a variety of sources including the Environment Agency (EA) and the British Geological Survey (BGS). Processes, incidents and inventories not present on or within 250 m of the Site boundary have been excluded from the table. A full list of screening criteria can be found within Annex 19-1-2.

Table 6: Summary of Regulatory Information

Subject	Number present		Details
	On Site	Off Site to 250m	
Agency and Hydrological			
Active Discharge Consents	0	8	For sewage discharges.

Subject	Number present		Details
	On Site	Off Site to 250m	
Licensed Pollution Release	-	1	Timpson dry cleaners 220 m to the southeast.
Pollution Incidents	2	1	Two pollution incidents recorded on Site, at Sevington Farm and Chippenham Lane. A non-identified incident in 2009 with significant impact (Category 2) to water occurred on Site. A slurry pollution incident with minor impact (Category 3) to water, land and air occurred in 2002 on Site. Outside of the Site there has been a hydrocarbon pollution incident in 2001 with minor impact to water, slurry pollution incident in 2014 with significant impact to water, and soil pollution with minor impact to land in 2002.

1.2.12 There are no additional contaminated land register entries, pollution incidents, pollution prevention controls, prosecutions relating to controlled waters or authorised processes, registered radioactive substances or hazardous substances, identified on or within 250 m of the site.

Licensed Waste Management Facilities

1.2.13 An attempt has been made to identify any landfilling operations, past and present that have taken place in the vicinity of the Site. There are no active or historic landfills or waste sites on or within 250 m.

1.2.14 There are 175 waste exemption records within 500 m, six of which are on Site relating to farming and agricultural waste including for storage of sludge, storage of waste, preparatory treatments (bailing, sorting and shredding), use of waste, cleaning of waste and disposal by incineration. Off-site waste exemptions relate to farming.

Industrial Land Use

1.2.15 According to the Groundsure Report, there are 37 recent contemporary trade directory entries within 250 m of the Site. On Site there are pylons and a water pumping station. An unspecified tank was also recorded on the 1977 OS map. Offsite there are several pylons, a water tower, business park, slurry bed, silos, vehicle repair garage, gas governor, electricity substations and commercial/industrial sites for measurement equipment and chemicals.

Site Walkover

General Description

1.2.16 Site walkovers of the northwestern cable route area were completed on 28th May and 28th July 2025. A photolog documenting this visit has been created and is appended to this appendix as Annex 19-7-3. The walkover was undertaken in line with the proposed order limits and general arrangement of the scheme at that time.

1.2.17 It was not possible to access every field along the route due to landowner permissions, but where access was not possible fields were observed from gateways on public roads.

1.2.18 The area comprises agricultural fields, which during the site walkover were observed to contain grain crops, meadows and livestock fields. Some fields had been recently harvested during the July visit.

1.2.19 Topography varies across the area.

Notable Features

1.2.20 Markers for an oil pipeline were observed in a field to the southwest of Coldharbour road and north of the A420 Bristol Road. In the same field, a dry ditch was observed running east-west across the ~~center~~centre of the field.

1.2.21 In the area to the southwest of Sheldon, between Chippenham Lane and the A4 Bath Road, there were a number of pylons and telegraph poles with overhead wires, generally running northwest to southeast.

1.2.22 The land sloped down south towards Bath Road, with a stream running parallel with the pylon route, north of the Chequers ~~cross roads~~crossroads. Himalayan Balsam was observed growing along the banks of the stream.

1.2.23 A rusted chest freezer was observed in the hedge on the southern side of the stream.

1.2.24 In the same area, in the field of a proposed compound, a collapsed inspection chamber was observed. It was not possible to see if this was for sewage, water or other services.

1.2.25 Along the A4 Bath Road, a layby was present which was being used for the storage of construction waste, presumed to be related to ongoing major roadworks along the A350 road to the east.

1.3 Conceptual Site Model and Preliminary Risk Assessment

Introduction

1.3.1 This section is aimed at identifying possible risks, if any, arising from substances used or deposited on-site, or from other sources of land contamination. Both past and current potentially contaminative land uses have been considered. It is based on the proposed site redevelopment detailed in **Volume 1, Chapter 2: The Order Limits [EN01068/APP/6.1]** and **Chapter 3: The Scheme [EN01068/APP/6.1]**.

Assessment Framework

1.3.2 The risk assessment framework that will be used for this assessment is described in **Annex 19-9: Preliminary Risk Assessment Approach and Methodology~~,~~ [EN01068/APP/6.3],** appended to the ES.

Conceptual Site Model

1.3.3 The potential sources of contamination, potential pathways and receptors which relate to the proposed cable route are described below.

Potential Contamination Sources

On Site:

S1. Potential made ground associated with the farmland, quarry, potential backfilled ponds and M4.

S2. Possible small-scale spills/leaks of fuels and oils associated with the agricultural use and roads.

S3. Historical elevated pesticides and herbicides associated with the agricultural use of the Site.

S4. Historic elevated nutrients, pathogens, heavy metals and ammonia from historic slurry spills.

Off-Site:

S5. Farmland in the wider surrounding area may also be sources of elevated nutrients, pesticides and herbicides and hydrocarbons with records of slurry and hydrocarbon spills.

S6. Dry cleaners located 220 m to the southeast.

Cable as a Source:

S7. Thermal impact from cables installed

Potential Pathways

P1. Dermal contact, ingestion or inhalation of soil or dust.

P2. Inhalation of gases or vapours.

P3. Leaching and migration of contaminants in groundwater. There is a ground dissolution risk which may provide preferential pathways to aquifers.

P4. Direct contact.

P5 Thermal advection diffusion dispersion

Potential Receptors

R1. Construction Workers.

R2. Residential and commercial neighbours on and adjacent to Site.

R3. Surface waters including ponds and streams on Site.

R4. The underlying Principal and Secondary A aquifers and SPZ 2.

R5. Licensed groundwater abstraction for general use located 457 m northwest at Brooms Farm.

R6. Infrastructure including cables.

R7. Public access including footpaths.

Preliminary Risk Assessment

1.3.4 An initial Conceptual Site Model (iCSM) illustrating plausible contaminant linkages has been formulated for the proposed cable route across the site. The qualitative preliminary risk assessment of the possible linkages of the above sources (S1 to S6), transport pathways (P1 to P4) and receptors (R1 to R7) are provided in the Table 7. Where there are no source-pathway-receptor linkages relating to the scheme, these have been excluded from the table.

1.3.5 The level of risk is determined based on the current condition of the Site (i.e. the effects of mitigation measures are not included).

1.3.6 The preliminary risk assessment undertaken with in this section applies to the construction, operation, and decommissioning phases. The assessment focuses on chronic risks to future end users and off-site receptors. While acute risks to human health exposure for construction, maintenance, and decommissioning workers are considered, it is assumed that these linkages will be managed by appropriate health and safety measures as identified in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12], Outline Operation Environmental Management Plan**

(OEMP) [EN010168/APP/7.13], and **Outline Decommissioning Strategy [EN010168/APP/7.14].**

1.3.7 The proposals include buried electricity cables only. There are no anticipated buried concrete or water supply pipes related to the proposed electricity cable. Electricity cables are not considered to be at risk from contaminated land and therefore are not included in the preliminary risk assessment.

1.3.8 There are no confined spaces as part of the scheme and therefore there is no human health receptor to a buildup of ground gas.

1.3.9 S6, the 'dry cleaners' has not been included in **Table 7** as there is no credible source-pathway-receptor linkage. The dry cleaner is over 200 m topographically downhill from Site.

1.3.10 An unnamed commercial/industrial property off an access road to Broomfield. However, it is not envisaged that the cable route will extend onto these properties for these to represent a source. They are however included in the potential receptors under R3 residential and commercial neighbours.

Table 7: Potential Sources, Pathways and Receptors

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S1: Potential for localised made ground (MG)	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R7:** Public access via footpaths	Mild	Unlikely	Very Low	S1-P1-R7	Soils in top 0.5m bgl potentially containing contaminants may impact the public via footpaths. Based on the information reviewed there are not considered to be any significant sources of contamination, and the exposure times would be limited. The risk will be lower post construction as unforeseen contamination encountered during the construction phase would be dealt with appropriately though a discovery strategy as detailed in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12]**~~..~~]. In addition, the Site will be subject to an appropriate planting scheme and there will be no bare areas for dust generation to create exposure.
	P3: Leaching and migration	**R3**: Surface waters	Mild	Low	Low	S1-P3-R3	Small surface watercourses are present across the Site, however, a contaminant linkage is not considered likely as the potential sources are considered to be isolated and minor and unlikely to present a risk to controlled waters.
		R4: Principal and Secondary A Aquifers, SPZ 2	Mild	Low	Low	S1-P3-R4	No significant sources of made ground have been identified in the desk study. However, given the sensitivity of the receptor beneath the entire Site, a discovery strategy will be carried out to ensure the proposed cable route does not pose a potential pathway.~~–~~ Moreover a HDD risk assessment will be undertaken to mitigate

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							against risks imposed by this cable installation method.
		R5: Brooms Farm groundwater abstraction	Mild	Unlikely	Very Low	S1-P3-R5	No significant sources of made ground have been identified in the desk study. Given the distance from Site and the anticipated groundwater flow anticipated to be southeast following the topography and strata dip direction, which is away from the abstraction, the likelihood of a risk is improbable.
	P2: Inhalation of gases or vapours	**R3:** Residential and commercial neighbours	Medium	Unlikely	Low	S1-P2-R3	Made ground is anticipated to be of limited extent and generation potential. However, if a ground gas source was identified, this may pose a risk to off-site neighbours.
S2: Possible small-scale spills/leaks of fuels associated with the agricultural use of the Site and roads.	**P1**: Dermal contact ingestion or inhalation	**R7:** Public access via footpath	Mild	Unlikely	Very Low	S2-P1-R7	Leaks or spills of fuel could adversely affect health. However, the likelihood of contact and limited exposure time suggests a very low potential risk to the public.
	P3: Leaching and Migration	**R3**: Surface waters	Minor	Low	Very Low	S2-P3-R3	Small surface watercourses are present across the Site. However, sources of contamination which could migrate and leach to cause significant harm is considered low.
		R4: Principal and Secondary A aquifer and SPZ2	Minor	Low	Very Low	S2-P3-R4	Contaminants can be mobilised via shallow groundwater. Groundwater levels may be shallow, based on the streams beginning in the south of the Site. Given the anticipated geology groundwater is likely to be perched on cohesive layers. However, the potential sources are considered to be isolated and minor and unlikely

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							to present a risk to controlled waters. A discovery strategy will be developed for the works to mitigate these risks. Moreover a HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R5: Brooms Farm groundwater abstraction	Mild	Unlikely	Very Low	S2-P3-R5	No significant sources of fuels or oils have been identified in the desk study. Given the distance from Site and the anticipated groundwater flow anticipated to be southeast following the topography and strata dip direction, which is away from the abstraction, the likelihood of a risk is improbable.
S3 and S6: Historic elevated pesticides and herbicides from on and off-site sources	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R7:** Public access via footpath	Mild	Unlikely	Very Low	S3-P1-R7	Elevated pesticides and herbicides could cause adverse effects to health. However, the likelihood of contact and limited exposure time suggests a very low potential risk to the public.
	P3: Leaching and Migration	**R3**: Surface waters	Mild	Low	Low	S3-P3-R3	Small surface watercourses are present across the Site. Excess herbicides or pesticides could flow into it and cause increased contamination.
		R4: Principal and Secondary A aquifer and SPZ 2	Mild	Unlikely	Very Low	S3-P3-R4	Excess herbicides and pesticides can be encountered in agricultural areas. Moreover a HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R5: Brooms Farm	Mild	Unlikely	Very Low	S3-P3-R5	Given the distance from Site and the anticipated groundwater flow anticipated to be southeast following the topography and strata dip direction,

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
		groundwater abstraction					which is away from the abstraction, the likelihood of a risk is improbable.
S4 and S5: Potential elevated nutrients, heavy metals and ammonia from historic slurry spills on and off site	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R7:** Public access via footpath	Mild	Unlikely	Very Low	S3-P1-R7	Elevated pesticides and herbicides could cause adverse effects to health. However, the likelihood of contact and limited exposure time suggests a very low potential risk to the public.
	P3: Leaching and Migration	**R3**: Surface waters	Mild	Low	Low	S4-P3-R3	Elevated nutrients could flow into surface waters and cause increased nutrient loading and impact ecology. However, given the spills are historic the likelihood is considered low.
		R4: Principal and Secondary A aquifer and SPZ 2	Minor	Low	Moderate/Low	S4-P3-R4	Given the spills are historic the likelihood is considered low. A discovery strategy will include high organic contamination. Moreover an HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R5: Brooms Farm groundwater abstraction	Minor	Unlikely	Low	S4-P3-R5	Given the distance from Site and the anticipated groundwater flow anticipated to be southeast following the topography and strata dip direction, which is away from the abstraction, the likelihood of a risk is improbable.
S7: Thermal impact from cables installed	**P5:** Thermal advection diffusion dispersion	**R3**: Surface waters including ponds.	Mild	Unlikely	Very Low	S7-P5-R3	The cable will be installed at a depth of 2 m BGL. The groundwater strikes identified by HDD range between 0.9 – 1.5 m BGL. Cables will be selected in order to minimise thermal loss considering available guidance from the EA. Therefore, impacts to receptor anticipated to be negligible.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S7: Thermal impact from cables installed	**P5:** Thermal advection diffusion dispersion	**R4**: The underlying Secondary A aquifer and Principal Aquifer and SPZ 2	Mild	Unlikely	Very Low	S7-P5-R4	The cable will be installed at a depth of 2 m BGL. The groundwater strikes identified by HDD range between 0.9 – 1.5 m BGL. Cables will be selected in order to minimise thermal loss considering available guidance from the EA. Therefore, impacts to receptor anticipated to be negligible.

Discussion of Risk to Future Construction Workers and Off-Site Receptors

1.3.11 The Scheme works will be undertaken in compliance with Construction Design and Management (CDM) Regulations 2015.

1.3.12 Prior to work commencing, a health and safety risk assessment will be carried out by the appointed Principal Contractor/developed in accordance with current health and safety regulations. This assessment will cover potential risks to construction staff, maintenance staff and the local population. Based on the findings of this risk assessment, appropriate mitigation measures will be implemented during the construction phase or during operation and maintenance.

1.3.13 Acute risks to construction and maintenance workers will be managed by appropriate health and safety measures as identified in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12], Outline Operation Environmental Management Plan (OEMP) [EN010168/APP/7.13],** and **Outline Decommissioning Strategy [EN010168/APP/7.14].**

1.3.14 Temporary works including excavations and trenching will be managed by the CEMP and **soil resources management plan (SRMP) [EN010168/APP/7.15]** and enforced by the Principal Contractor (PC). Access roads should be designated prior to construction and enforced by the PC. Spoil should be bunded away from sensitive receptors and covered to prevent dust and silt migration.

1.3.15 The HDD and installation may penetrate into the Principal Aquifer if encountered at shallow depths, albeit the HDD should not alter hydraulic properties and flow regime of the Principal Aquifer. Publicly available borehole records encounter the Great Oolite Principal Aquifer between 3m BGL and greater than 50m BGL, no groundwater strikes were recorded. Inert bentonite type slurries can be used to seal the walls of the bore or casing can be used which could prevent against contamination and reduce the impact of permeability on the Aquifer. See the preliminary risk assessment for the HDD for further risks associated **[EN010168/EXAM/9.X]**.

~~1.3.14~~1.3.16 The greatest potential for generation of dust will be during the Site works and therefore dust generation will be kept to a minimum in accordance with general good practice, as outlined in, for example, 'Environmental Good Practice on Site', CIRIA Publication C692 to reduce this risk.

~~1.3.15~~1.3.17 The risk to construction workers during the excavation and construction phases in terms of potential exposure to high concentrations of

contaminants is considered to be low given the historic and current land uses identified at the Site.

~~1.3.16~~1.3.18 Should gross contamination be identified during the construction phase, then this may pose a potential acute risk to construction works. It is likely to be able to be effectively managed through good health and safety practices and protocols. Adoption of appropriate dust suppression techniques would also mitigate the degree of potential particulate migration off-site.

1.4 Conclusions and Recommendations

Site Location

1.4.1 Lime Down Central Corridor is located to the south of the M4 and to the north of the A4, west of Chippenham and east of Yatton Keynall in Wiltshire.

Proposals

1.4.2 The proposals at the Site comprise the installation of a 400 kV cable within a Cable Route Corridor connecting the Solar PV Site to the north with the Existing National Grid Melksham Substation to the south. No enclosed spaces are anticipated.

Site Description

1.4.3 Lime Down Central Corridor comprises an irregular shaped piece of land, over approximately 7 km length. The Site is predominantly agricultural comprising fields, hedges and trees including pockets of woodland and sporadic ponds and ditches/streams. An unnamed commercial/industrial property off an access road to Broomfield and Cherrypatch Cottage off Chippenham Lane is included within the Site boundaries. There are several road crossings including the M4, Sevington, access road to Broomfield House, Cromhall Lane, Coldharbour, A420, Chippenham Lane and Bath Road (A4). The Site generally falls gently from 125m OD in the northwest, down to 65 m OD at Bath Road in the southeast, with Fagot Heath rising up to 134 m OD towards the centre of the Site.

Ecologically Sensitive Sites

1.4.4 The Site is adjacent to the Cotswolds Area of Outstanding Natural Beauty. Ancient Woodland is present in the vicinity of the Site with Chapscroft Wood being directly adjacent to the Site. Deciduous woodland priority habitat is located towards the centre and adjacent to the Site.

Site History

1.4.5 The historical maps of the Site and surrounding area indicate that Lime Down Central Corridor has been farmland since 1885, with Sevington Farm, well, school, Fish Ponds and Boat House all present close to the Site boundary. The M4 was constructed by 1949 edition map. In the surrounding area, several farms, residential properties, wells and quarries have been located in the area. A water tower was constructed by 1949. An electricity sub-station was present to the west from 1980 and no longer labelled by the 2010 edition map. Industrial and business parks have been more recently developed to the east and northwest of the Site. Quarries have been recorded on Site in the northeast and adjacent to the Site.

Geology

1.4.6 The ground conditions are anticipated to comprise topsoil comprising lime-rich loamy soils and clayey soils with impeded drainage, overlying the Kellaways Formation (Kellaways Clay Member mudstone), Cornbrash Formation (limestone) and Forest Marble Formation (mudstone with limestone beds). Alluvium superficial deposits are anticipated in localised pockets adjacent to streams in the north and very south. The depth to engineering strength rock is unknown, however, it is likely that engineering rockhead is shallow across the Site. Localised areas of made ground may be encountered, associated with the barn, farmyard and potentially backfilled ponds.

Geohazards

1.4.7 A moderate risk has been identified for compressible ground at locations of Alluvium, shrink-swell potential of shallow clays (Kellaways Clay Member) and a moderate risk of landslides and ground dissolution at Fagot Heath. The Site is not in a mining area or mineral safeguarding area. Off-site limestone quarries have been identified adjacent to Site.

Hydrogeology

1.4.8 Shallow groundwater may be encountered, perched on the low permeability cohesive soils anticipated beneath portions of the Site. The Kellaways Formation, Cornbrash Formation and Forest Marble Formation are designated as a Secondary A aquifers with high vulnerability and the Site is within a Source Protection Zone 2 and 3. The underlying limestones of the Great Oolite Group are a designated Principal Aquifer. There is one licensed groundwater abstraction recorded in the vicinity of the Site located over 400m to the northwest for Brooms Farm. Flooding from groundwater has been recorded as low at the Site with moderate to high risk recorded at Sevington, Fowlswick and Bath Road (A4).

Hydrology

1.4.9 There are over 150 water bodies within 250 m of the Site. In summary, there is a pond and a stream in the north of the Site, a stream/ditch to the north of Fir Tree Farm, a ditch along the A420, a stream/ditch to the north of Cherrypatch Cottage and in the southeast and along the southwest of the Site for tributaries to Pudding Brook. From the Ordnance Survey plans there are a number of small ponds on the Site, not identified on the Groundsure plan, possibly due to scale. The Site is within five surface water catchments, including Pudding Brook, Avon, By Brook, Rodbourne Brook and Sutton Benger Brook. Pudding Brook and Sutton Benger Brook have a good ecological rating whereas By Brook, Avon and Rodbourne Brook have a moderate rating. No Licensed Surface Water Abstractions have been identified within 2 km of the site. There is a moderate to high risk of flooding in the very north of the Site, adjacent to the M4 and moderate along the southwest and south of the Site associated with Pudding Brook.

Contaminated Land

1.4.10 On Site there are recent contemporary trade directories including pylons and a water pumping station. An unspecified tank was also recorded on the 1977 OS map. There are six waste exemptions relating to farming and agricultural waste including for storage of sludge, storage of waste, preparatory treatments (bailing, sorting and shredding), use of waste, cleaning of waste and disposal by incineration. Pollution incidents have been recorded on Site including a non-identified incident in 2009 with significant impact to water and a slurry pollution incident with minor impact to water, land and air in 2002. Other potential sources of made ground may be associated with farmland, quarry, potential backfilled ponds and the M4 embankments.

1.4.11 Off-site there are several pylons, a water tower, business park, slurry bed, silos, vehicle repair garage, gas governor, electricity substations and a dry cleaners located 220 m to the southeast. There are no active or historic landfills or waste sites within 250 m. However, there are many waste exemption records within 250 m relating to farming. Outside of the Site there has been a hydrocarbon pollution incident in 2001 with minor impact to water, slurry pollution incident in 2014 with significant impact to water, and soil pollution with minor impact to land in 2002.

Preliminary Risk Assessment Conclusions

1.4.12 An iCSM was developed to identify any credible source-pathway-receptor linkages relating to the proposed electricity cable route. There is considered to be typically a low risk from contaminated land to human

health or controlled water receptors. There is a potential for a moderate/low risk to the Principal and Secondary A aquifers and SPZ2 if made ground or pollution incidents are encountered, or HDD is required and the cable route presents a potential pathway. A preliminary risk register has been produced for the HDD and associated construction activities **[EN010168/EXAM/9.X]**.

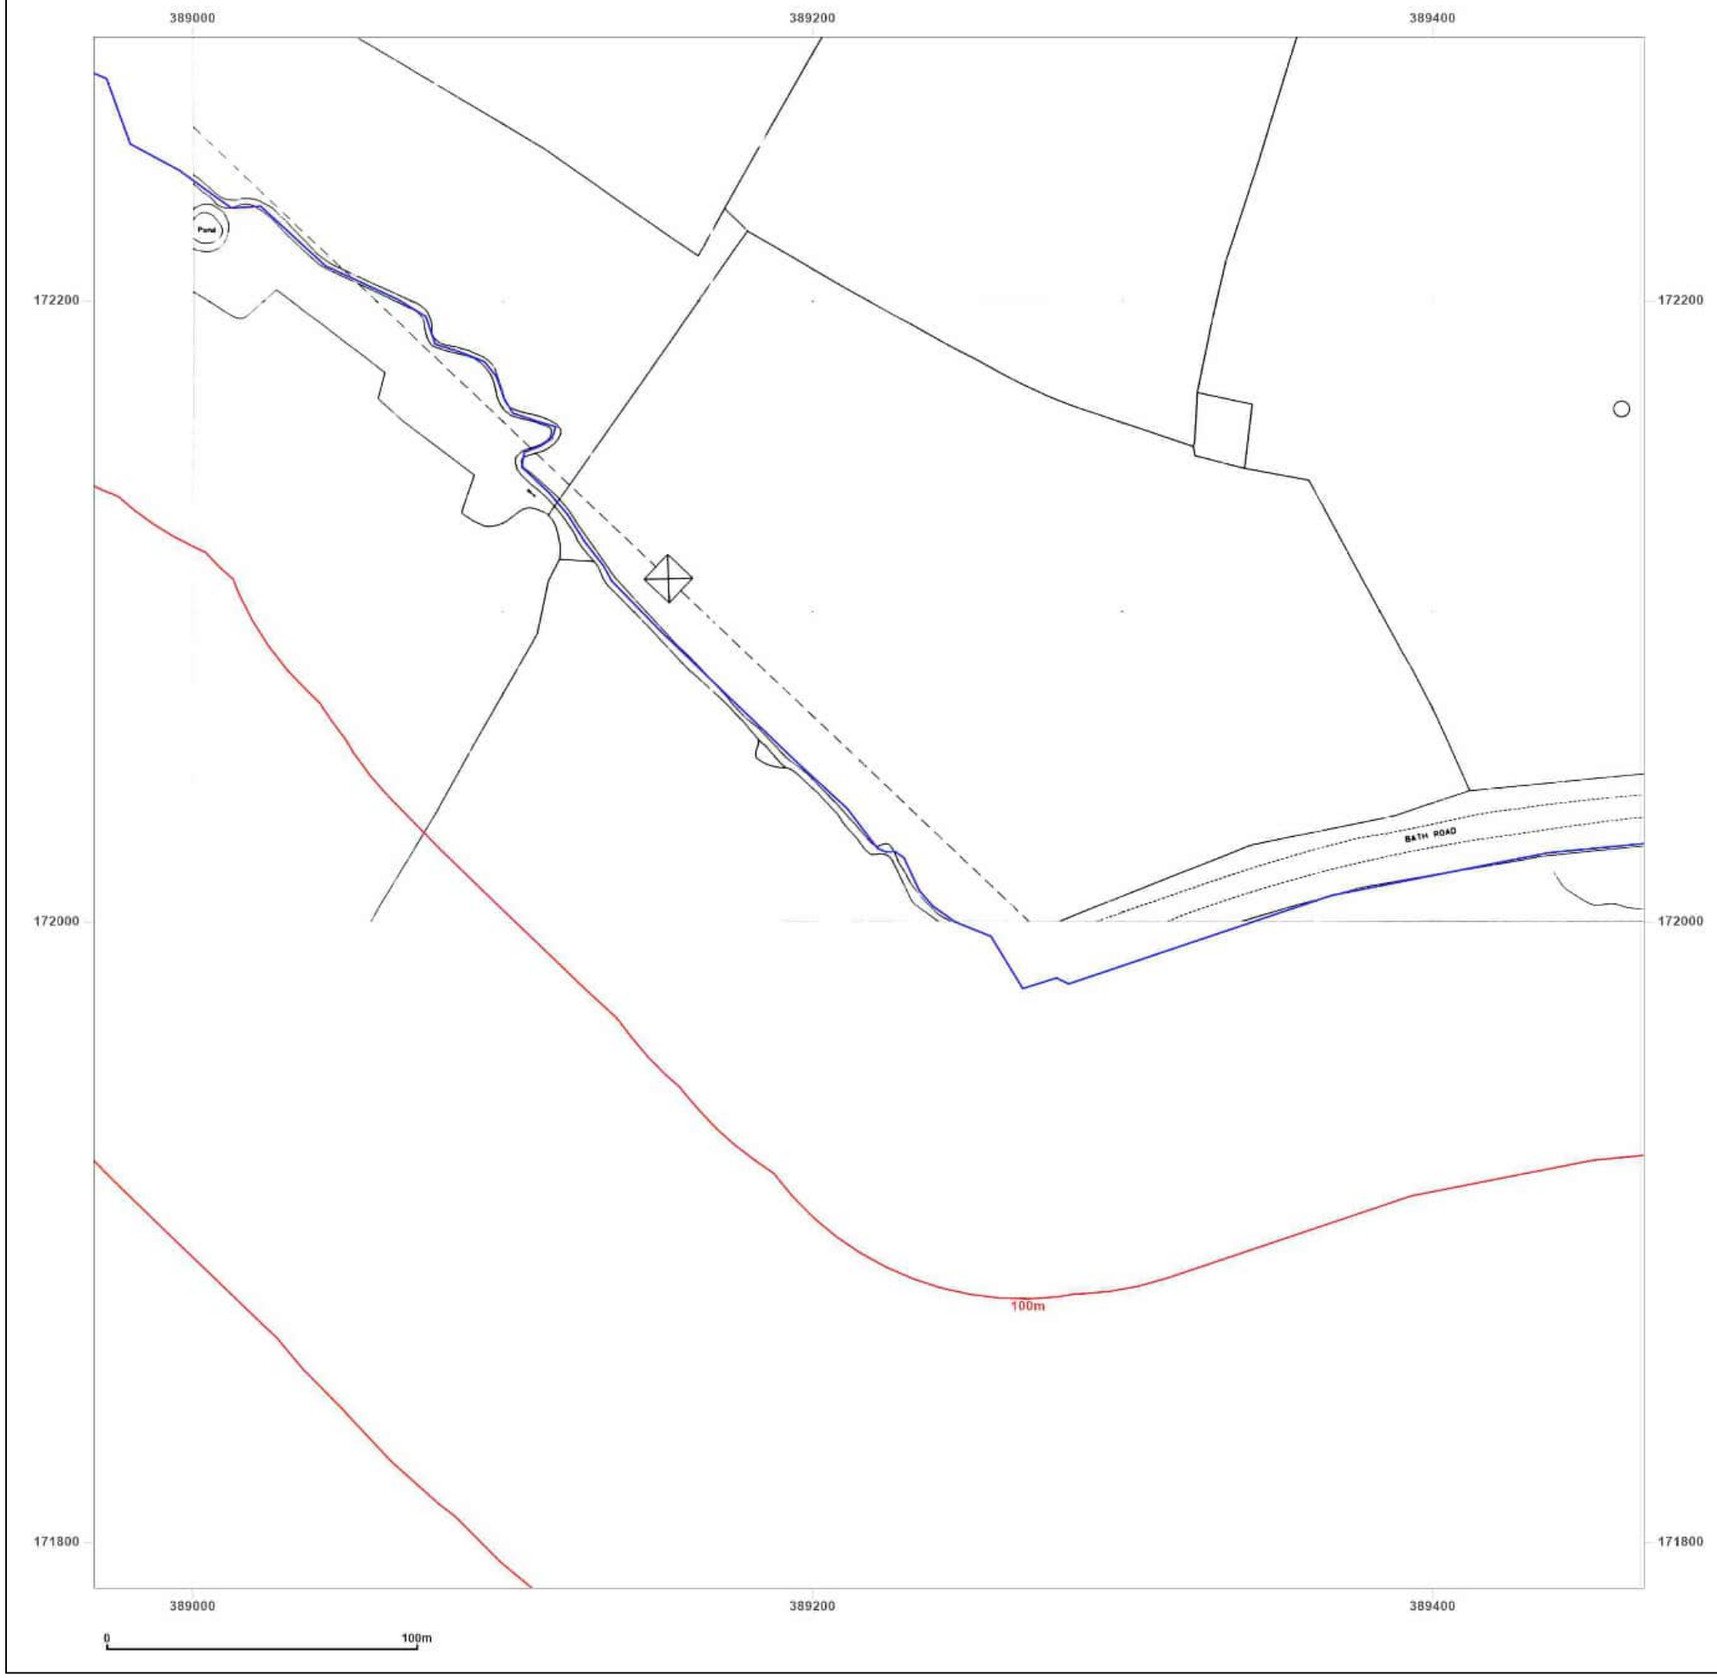

Preliminary Geotechnical Considerations

1.4.13 Although there is spatial flexibility within the Cable Route Corridor , there are a number of key crossings along the route (such as major roads, utilities, streams/ponds and historic quarries described above) that will need geotechnical consideration to inform the construction risks and appropriate methodology. The ground conditions including the strength of shallow soils and the depth to engineering rockhead and groundwater is unknown for the Site. However, shallow rockhead and groundwater is anticipated which may cause engineering difficulties. Moderate landslide and ground dissolution geohazards are present along the route near Fagot Heath which will be investigated and avoided where practicable. The impact of compressible ground and shrink-swell clays are not considered to be significant for the proposed cable route. Risk assessments will be developed for HDD avoidance areas where applicable. Preliminary risk assessments have been undertaken for HDD areas which can be found in **[EN010168/EXAM/9.X]**.

Recommendations

1.4.14 Potential sources of contamination and sensitive receptors will be avoided where practicable. Locations of potential contaminants and geohazards will be mapped to undertake optioneering of the cable route. Once the route is narrowed down a geotechnical and geo-environmental ground investigation should be carried out prior to the construction phase. A ground investigation is recommended to inform on the geotechnical properties and the depth to engineering rockhead for the construction methodology (particularly at key crossings) to support the detailed design and to delineate the risk from ground dissolution and landslides. Any areas of potential made ground along the route will be targeted for sampling and laboratory testing of common contaminants. Any investigation would talk place post-consent and pre-construction.

1.1 Historical industrial land uses

Records within 500m	47

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14 >**

This data is sourced from Ordnance Survey / Groundsure.

1.4 Historical petrol stations

Records within 500m	0

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.5 Historical garages

Records within 500m	7

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14 >**

This data is sourced from Ordnance Survey / Groundsure.

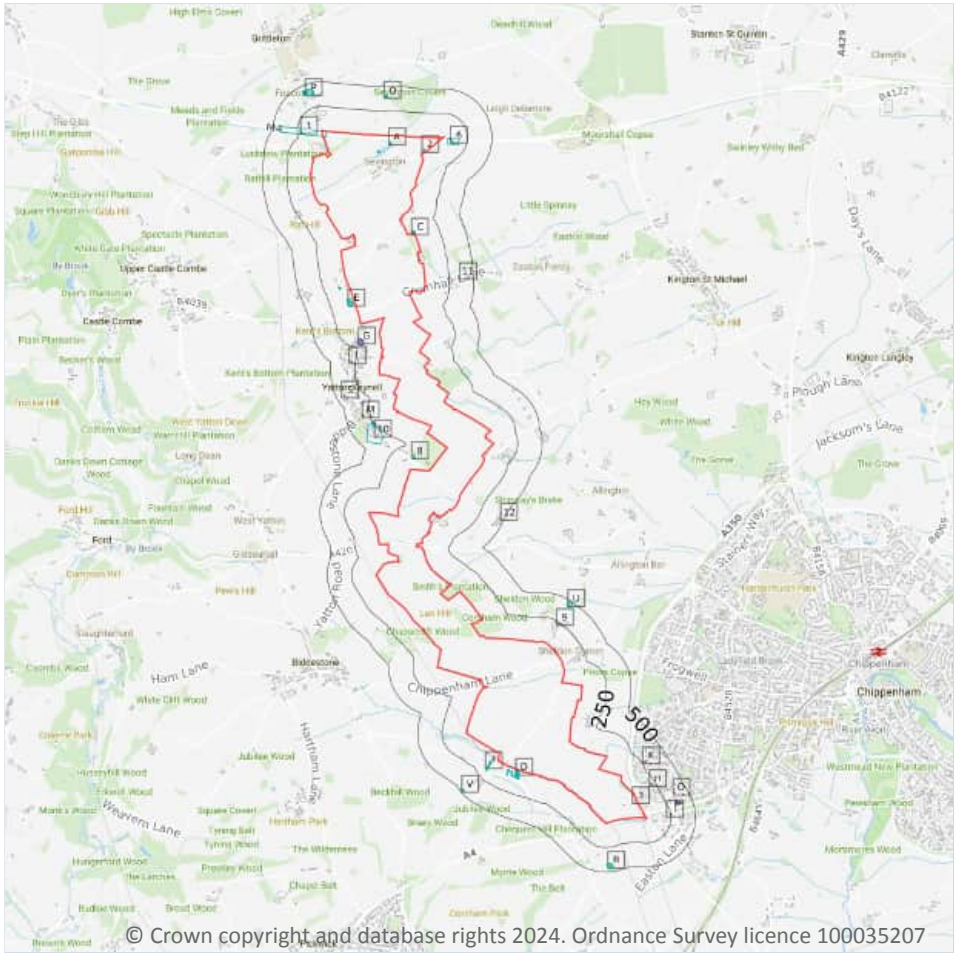

1.6 Historical military land

Records within 500m	0

Areas of military land digitised from multiple sources including the National Archives, local records, MOD records and verified other sources, intelligently grouped into contiguous features.

This data is sourced from Ordnance Survey / Groundsure / other sources.

2.1 Historical industrial land uses

Records within 500m	59

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 10,560 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use - un-grouped map on **page 20 >**

3 Waste and landfill

3.1 Active or recent landfill

Records within 500m	0

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m	0

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m	0

Landfill sites identified from Local Authority records and high detail historical mapping.

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m	0

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.5 Historical waste sites

Records within 500m	0

Waste site records derived from Local Authority planning records and high detail historical mapping.

This data is sourced from Ordnance Survey/Groundsure and Local Authority records.

3.6 Licensed waste sites

Records within 500m	0

Active or recently closed waste sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.7 Waste exemptions

Records within 500m	175

Activities involving the storage, treatment, use or disposal of waste that are exempt from needing a permit. Exemptions have specific limits and conditions that must be adhered to.

Features are displayed on the Waste and landfill map on **page 27 >**

4.2 Current or recent petrol stations

Records within 500m	1

Open, closed, under development and obsolete petrol stations.

Features are displayed on the Current industrial land use map on **page 42 >**

ID	Location	Company	Address	LPG	Status
J	292m SE	SAINSBURYS	Bath Road, Chippenham, Wiltshire, SN14 0BJ	No	Open

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m	0

High voltage underground electricity transmission cables.

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m	0

High pressure underground gas transmission pipelines.

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m	0

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m	0

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

This data is sourced from the Health and Safety Executive.

4.7 Regulated explosive sites

Records within 500m	0

Sites registered and licensed by the Health and Safety Executive under the Manufacture and Storage of Explosives Regulations 2005 (MSER). The last update to this data was in April 2011.

This data is sourced from the Health and Safety Executive.

4.8 Hazardous substance storage/usage

Records within 500m	0

Consents granted for a site to hold certain quantities of hazardous substances at or above defined limits in accordance with the Planning (Hazardous Substances) Regulations 2015.

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m	0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m	10

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

Features are displayed on the Current industrial land use map on **page 42 >**

This data is sourced from the Environment Agency and Natural Resources Wales.

4.11 Licensed pollutant release (Part A(2)/B)

Records within 500m	2

Records of Part A(2) and Part B installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

Features are displayed on the Current industrial land use map on **page 42 >**

ID	Location	Address	Details	
21	220m SE	Timpson Supermarket Services, Bath Road, Chippenham, SN14 0BJ	Process: Dry Cleaning Status: Current Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of enforcement: No Enforcements Notified Comment: No Enforcements Notified
J	296m SE	Sainsbury Filling Station, Bath Road, Chippenham, Wiltshire, SN14 0BJ	Process: Unloading of Petrol into Storage at Service Stations Status: Current Permit Permit Type: Part B	Enforcement: No Enforcements Notified Date of enforcement: No Enforcements Notified Comment: No Enforcements Notified

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m	0

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m	15

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

Features are displayed on the Current industrial land use map on **page 42 >**

This data is sourced from the Environment Agency and Natural Resources Wales.

4.14 Pollutant release to surface waters (Red List)

Records within 500m	0

Discharges of specified substances under the Environmental Protection (Prescribed Processes and Substances) Regulations 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.15 Pollutant release to public sewer

Records within 500m	0

Discharges of Special Category Effluents to the public sewer.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.16 List 1 Dangerous Substances

Records within 500m	0

Discharges of substances identified on List I of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.17 List 2 Dangerous Substances

Records within 500m	0

Discharges of substances identified on List II of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.18 Pollution Incidents (EA/NRW)

Records within 500m	8

Records of substantiated pollution incidents. Since 2006 this data has only included category 1 (major) and 2 (significant) pollution incidents.

Features are displayed on the Current industrial land use map on **page 42 >**

ID	Location	Details	
6	**On site**	**Incident Date: 12/11/2009** **Incident Identification: 731714** **Pollutant: Pollutant Not Identified** **Pollutant Description: Not Identified**	**Water Impact: Category 2 (Significant)** **Land Impact: Category 4 (No Impact)** **Air Impact: Category 4 (No Impact)**

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m	3

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

Features are displayed on the Current industrial land use map on **page 42 >**

ID: K, Location: 436m NW, Permit: YP3230UK
Operator: Marsh
Activity: INTENSIVE FARMING; > 2,000 PIGS (PRODUCTION PIGS)
Address: Brooms Farm Yatton Keynall Wiltshire SN14 7JU
Sector Agriculture, Sub-sector: Intensive Farming
Releases:

Route	Substance	Reporting threshold (kg)	Quantity (kg)
Air	Nitrogen oxides (NO and NO2) as NO2	100000kg	Below Reporting Threshold

ID: K, Location: 436m NW, Permit: YP3230UK
Operator: Marsh
Activity: INTENSIVE FARMING; > 2,000 PIGS (PRODUCTION PIGS)
Address: Brooms Farm Yatton Keynall Wiltshire SN14 7JU
Sector Agriculture, Sub-sector: Intensive Farming
Releases:

Route	Substance	Reporting threshold (kg)	Quantity (kg)
Air	Methane	10000kg	31500kg

ID: K, Location: 436m NW, Permit: YP3230UK
Operator: Marsh
Activity: INTENSIVE FARMING; > 2,000 PIGS (PRODUCTION PIGS)
Address: Brooms Farm Yatton Keynall Wiltshire SN14 7JU
Sector Agriculture, Sub-sector: Intensive Farming
Releases:

Route	Substance	Reporting threshold (kg)	Quantity (kg)
Air	Ammonia	1000kg	12587kg

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.20 Pollution inventory waste transfers

Records within 500m	1

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

Features are displayed on the Current industrial land use map on **page 42 >**

ID: K, Location: 436m NW, Permit: YP3230UK
Operator: Marsh
Activity: INTENSIVE FARMING; > 2,000 PIGS (PRODUCTION PIGS)
Address: Brooms Farm Yatton Keynall Wiltshire SN14 7JU
Sector Agriculture, Sub-sector: Intensive Farming
Releases:

Route	Route description	Quantity (tonnes)	Release level	EWC code	EWC description	Hazardous waste
R5	Recycling/reclamation of other inorganic materials	Below Reporting Threshold	Below Reporting Threshold	02 01 04	waste plastics (except packaging)	No
D1	Deposit into or onto land (eg landfill, etc.)	Below Reporting Threshold	Below Reporting Threshold	18 02 01	sharps (except 18 02 02)	No
R5	Recycling/reclamation of other inorganic materials	Below Reporting Threshold	Below Reporting Threshold	15 01 02	plastic packaging	No
D1	Deposit into or onto land (eg landfill, etc.)	Below Reporting Threshold	Below Reporting Threshold	15 01 06	mixed packaging	No

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

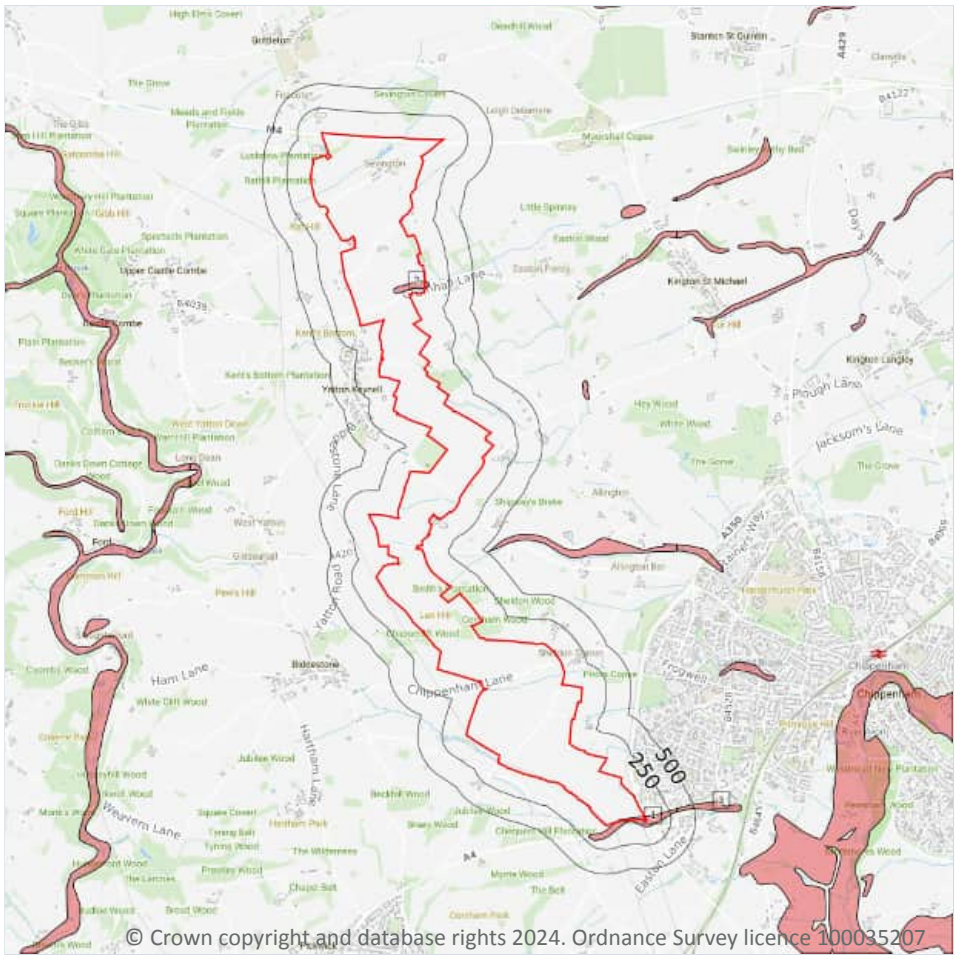

4.21 Pollution inventory radioactive waste

Records within 500m	0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer

- Unknown

5.1 Superficial aquifer

Records within 500m	3

Aquifer status of groundwater held within superficial geology.

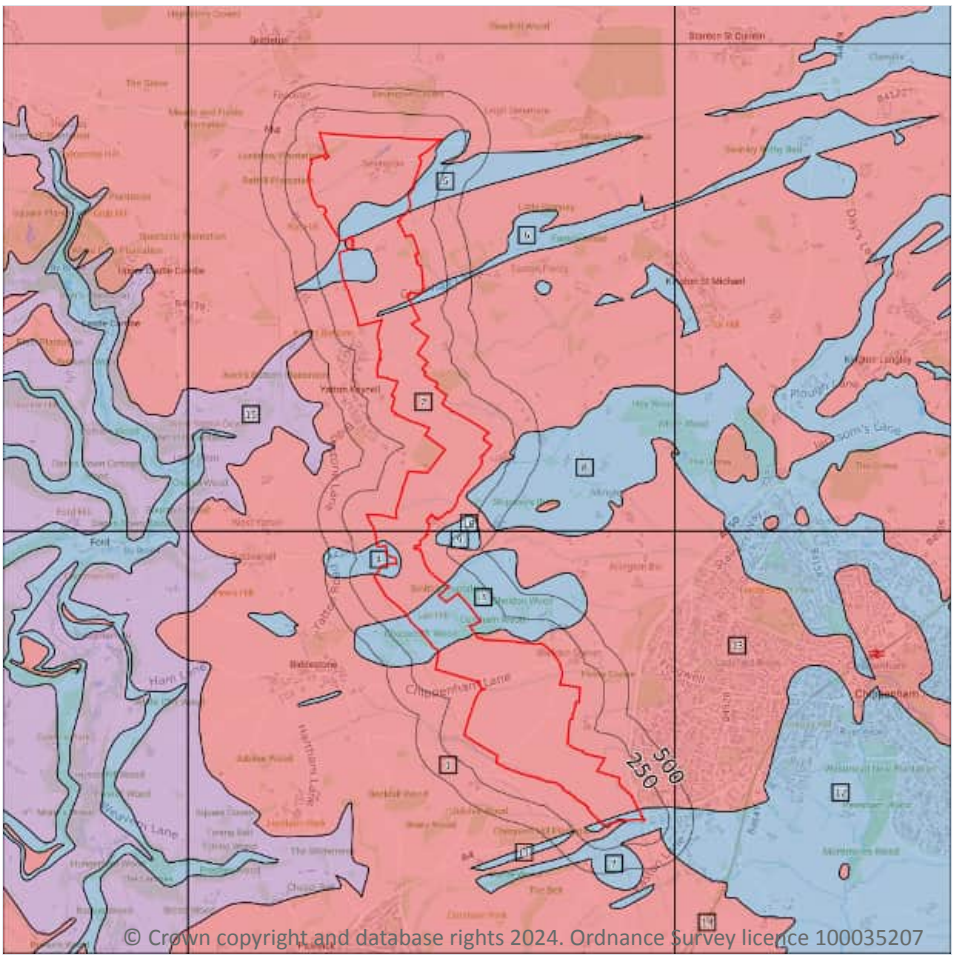

Features are displayed on the Hydrogeology map on **page 55 >**

ID	Location	Designation	Description
1	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
2	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

ID	Location	Designation	Description
3	317m SE	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.2 Bedrock aquifer

Records within 500m	15

Aquifer status of groundwater held within bedrock geology.

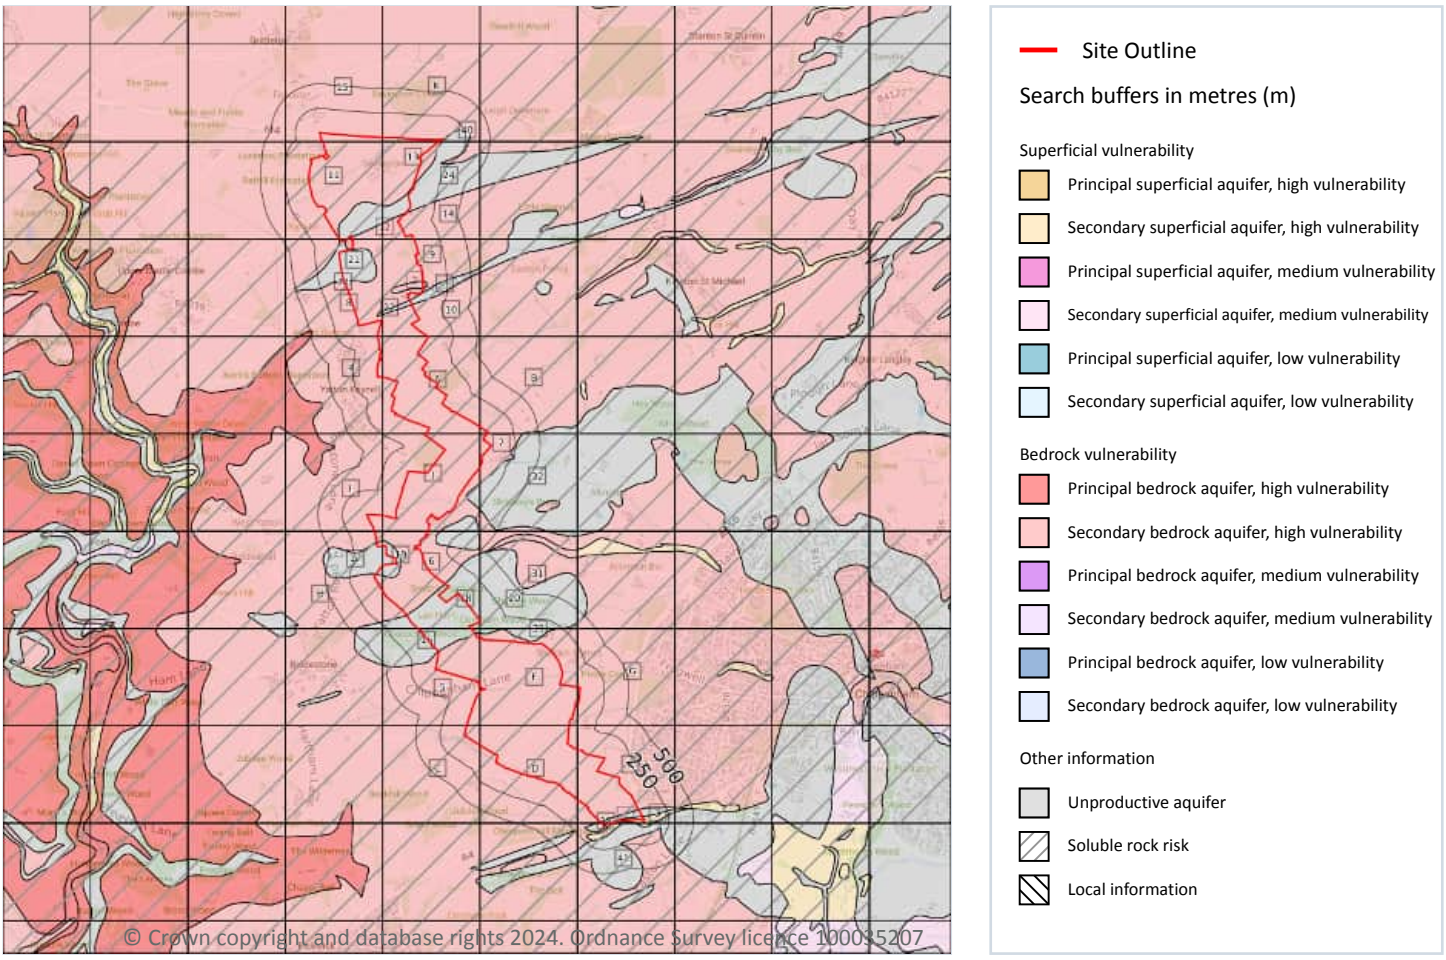

Features are displayed on the Bedrock aquifer map on **page 57 >**

ID	Location	Designation	Description
1	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
2	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

ID	Location	Designation	Description
3	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
4	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
5	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
6	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
7	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
8	61m SE	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
9	91m S	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
10	105m S	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
11	253m S	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
12	308m SE	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
13	331m SE	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
14	480m SE	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
15	481m NW	Principal	Geology of high intergranular and/or fracture permeability, usually providing a high level of water storage and may support water supply/river base flow on a strategic scale. Generally principal aquifers were previously major aquifers

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Groundwater vulnerability

5.3 Groundwater vulnerability

Records within 50m	45

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on **page 59 >**

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
1	On site	Summary Classification: Secondary superficial aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: 300-550mm/year	Vulnerability: High Aquifer type: Secondary Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures

5.4 Groundwater vulnerability- soluble rock risk

Records on site	**21**

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
27	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**16.0%**

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
28	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**2.0%**
29	**Very significant soluble rocks are likely to be present with a moderate possibility of localised natural subsidence or dissolution-related degradation of bedrock, especially in adverse conditions such as concentrated surface or subsurface water flow.**	**5.0%**
30	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**0.0%**
31	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**13.0%**
32	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**1.0%**
33	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**1.0%**
34	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**1.0%**
35	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**54.0%**
A	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**48.0%**
B	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**52.0%**
C	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**63.0%**
D	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**78.0%**

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
E	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**0.0%**
F	**Very significant soluble rocks are likely to be present with a moderate possibility of localised natural subsidence or dissolution-related degradation of bedrock, especially in adverse conditions such as concentrated surface or subsurface water flow.**	**2.0%**
G	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**79.0%**
H	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**74.0%**
I	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**28.999999999999996%**
J	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**59.0%**
K	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**11.0%**
L	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**0.0%**

This data is sourced from the British Geological Survey and the Environment Agency.

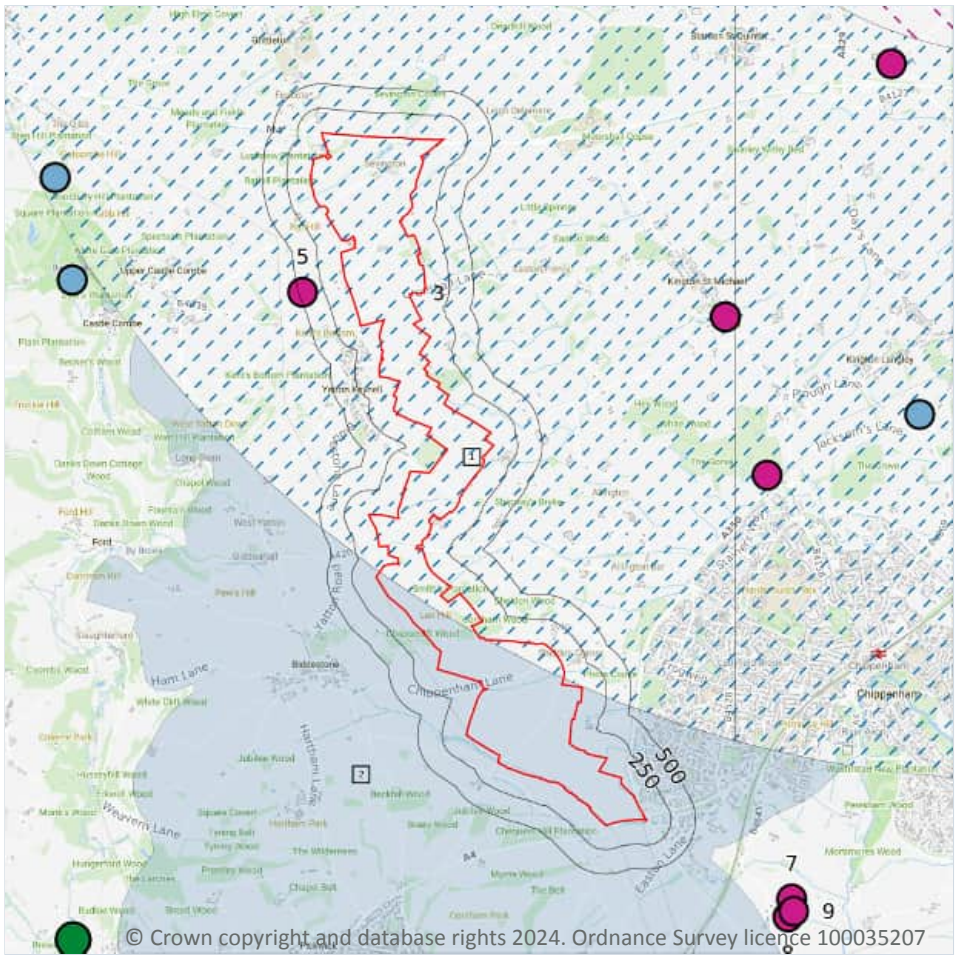

5.5 Groundwater vulnerability- local information

Records on site	**0**

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk ↗.

This data is sourced from the British Geological Survey and the Environment Agency.

Abstractions and Source Protection Zones

5.6 Groundwater abstractions

Records within 2000m	4

Licensed groundwater abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, between two points (line data) or a larger area.

Features are displayed on the Abstractions and Source Protection Zones map on **page 70 >**

This data is sourced from the Environment Agency and Natural Resources Wales.

5.7 Surface water abstractions

Records within 2000m	**0**

Licensed surface water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.8 Potable abstractions

Records within 2000m	0

Licensed potable water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m	3

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

Features are displayed on the Abstractions and Source Protection Zones map on **page 70 >**

ID	Location	Type	Description
1	**On site**	**3**	**Total catchment**
2	**On site**	**2**	**Outer catchment**
4	408m E	3	Total catchment

This data is sourced from the Environment Agency and Natural Resources Wales.

5.10 Source Protection Zones (confined aquifer)

Records within 500m	1

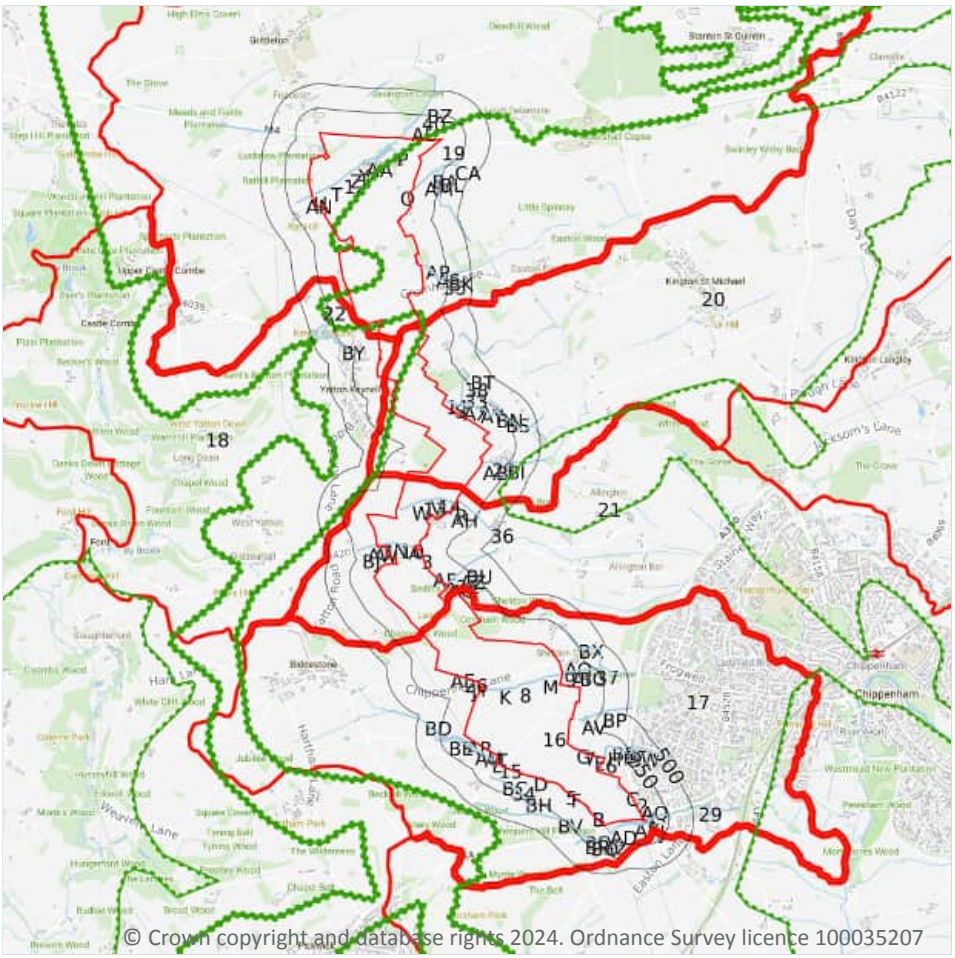

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

Features are displayed on the Abstractions and Source Protection Zones map on **page 70 >**

ID	Location	Type	Description
3	**On site**	**2c**	**Outer catchment within confined aquifer**

This data is sourced from the Environment Agency and Natural Resources Wales.

6 Hydrology

Site Outline

6.2 Surface water features

Records within 250m	66

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on **page 73 >**

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site	5

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on **page 73 >**

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
16	**On site**	**River**	**Pudding Bk - source to conf R Avon (Brist)**	**GB109053027410**	**Avon Bristol Rural**	**Avon Bristol and Somerset Nort**

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified	**5**

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on **page 73 >**

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
-	1231m SE	River	Pudding Bk - source to conf R Avon (Brist)	GB109053027410 ↗	Moderate	Fail	Good	2019
-	1830m W	River	By Brook (Broadmead Bk to Doncombe Bk)	GB109053027480 ↗	Moderate	Fail	Moderate	2019

-	3474m NE	River	Rodbourne Bk - source to conf R Avon (Brist)	GB109053027720 ↗	Moderate	Fail	Moderate	2019

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
-	3670m NE	River	Sutton Benger Bk - source to conf R Avon (Brist)	GB109053027700 ↗	Moderate	Fail	Good	2019

This data is sourced from the Environment Agency and Natural Resources Wales.

6.5 WFD Groundwater bodies

Records on site	2

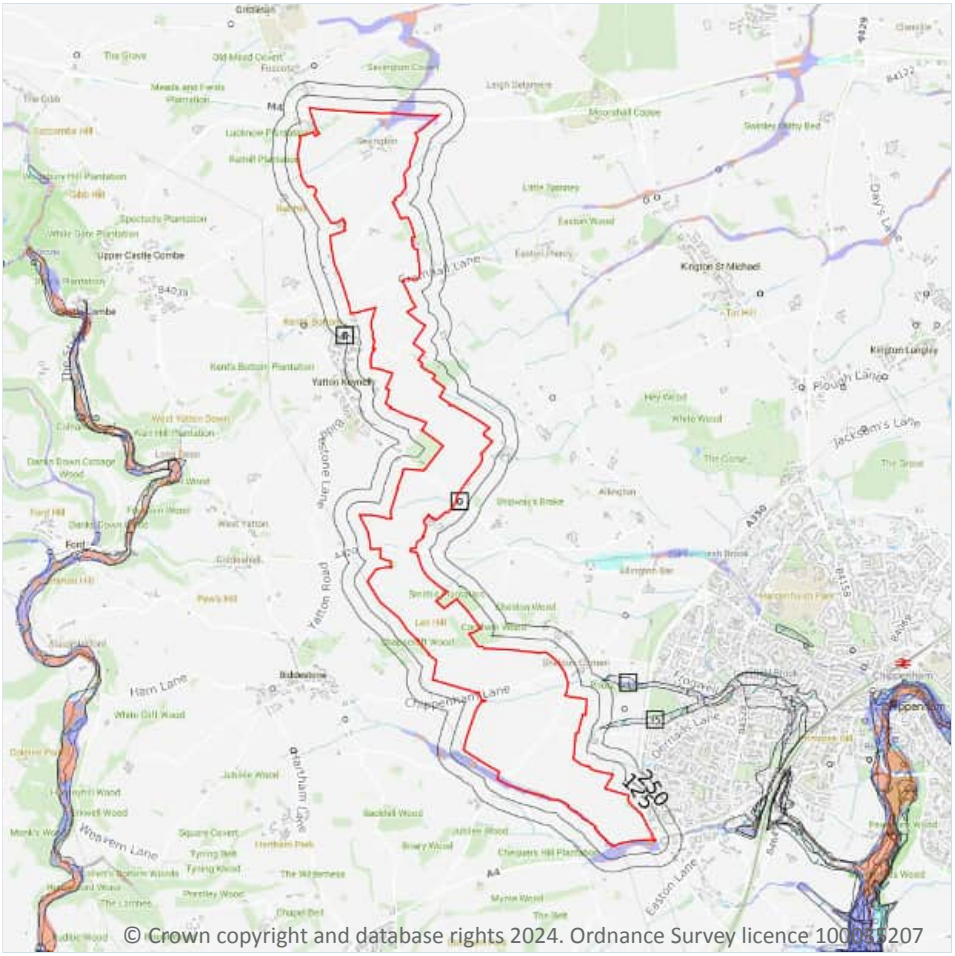

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

Features are displayed on the Hydrology map on **page 73 >**

ID	Location	Name	Water body ID	Overall rating	Chemical rating	Quantitative	Year

This data is sourced from the Environment Agency and Natural Resources Wales.

7 River and coastal flooding

7.1 Risk of flooding from rivers and the sea

Records within 50m	30

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea (RoFRaS)/Flood Risk Assessment Wales (FRAW) models. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition. The risk categories for RoFRaS for rivers and the sea and FRAW for rivers are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance). The risk categories for FRAW for the sea are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 200 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 200 chance) or High (greater than or equal to 1 in 30 chance).

Features are displayed on the River and coastal flooding map on **page 91 >**

Distance	Flood risk category
On site	**High**
0 - 50m	High

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m	**7**

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

Features are displayed on the River and coastal flooding map on **page 91 >**

ID	Location	Event name	Date of flood	Flood source	Flood cause	Type of flood
C	9m SE	This Represents Flooding In The Area In 1978	1978-03-06 1978-03-06	Ordinary watercourse	Obstruction/blockage - culvert	Fluvial

J	230m SE	Ea112_Ladyfield Brook (Nmr Sect) _Chippenham	1968-07-10 1968-07-15	Ordinary watercourse	Channel capacity exceeded (no raised defences)	Fluvial

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m	0

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m	0

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

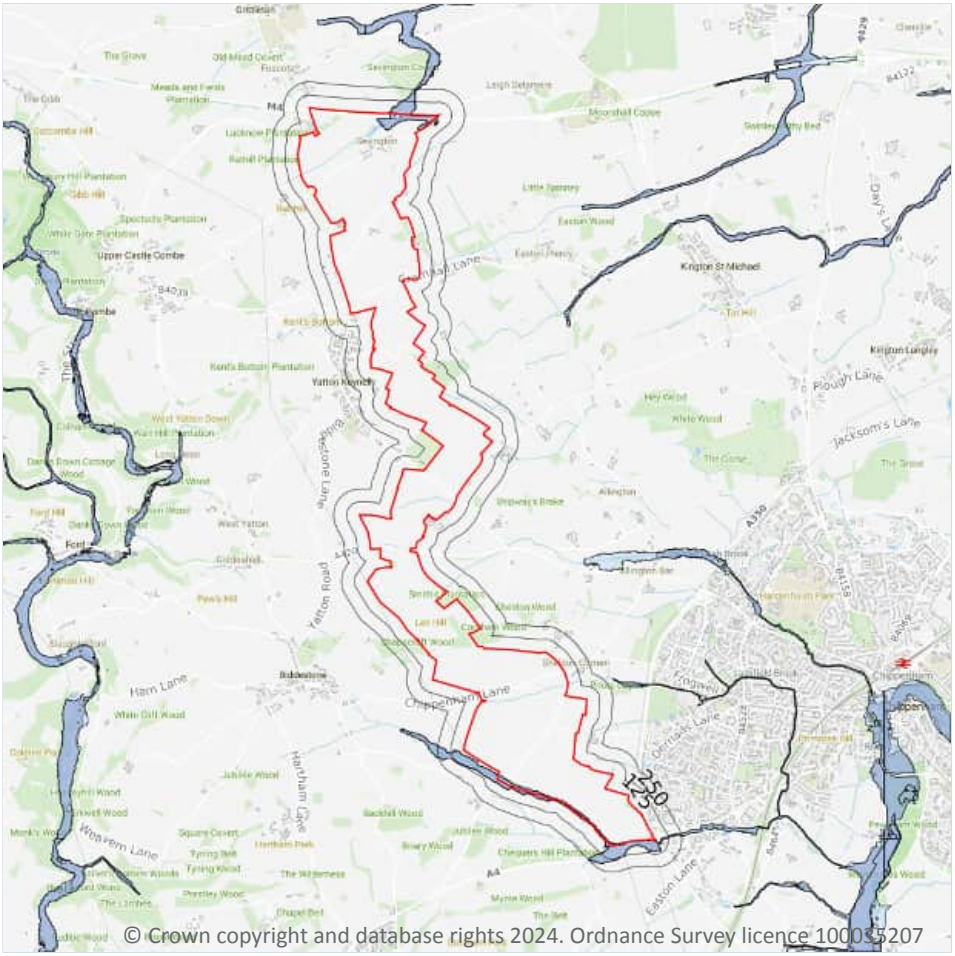

7.5 Flood Storage Areas

Records within 250m	0

Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

This data is sourced from the Environment Agency and Natural Resources Wales.

River and coastal flooding - Flood Zones

7.6 Flood Zone 2

Records within 50m	1

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

Features are displayed on the River and coastal flooding map on **page 91 >**

Location	Type
On site	**Zone 2 - (Fluvial /Tidal Models)**

This data is sourced from the Environment Agency and Natural Resources Wales.

7.7 Flood Zone 3

Records within 50m	1

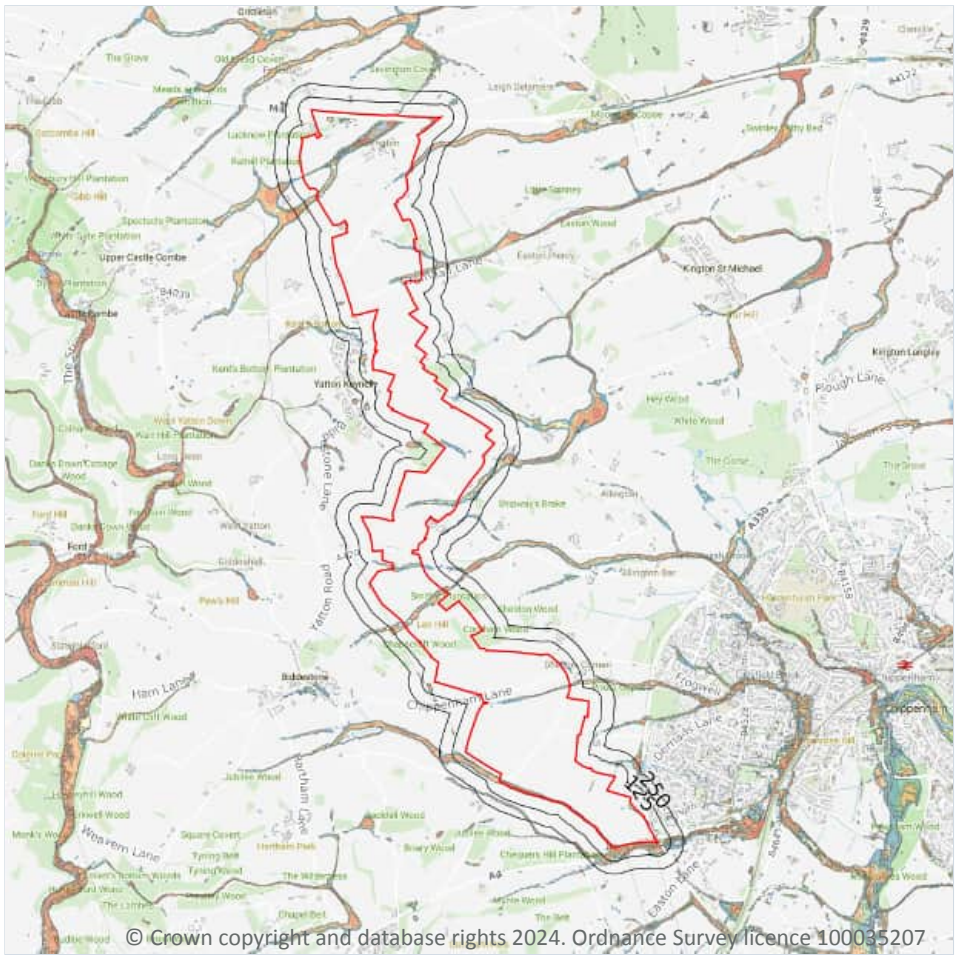

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

Features are displayed on the River and coastal flooding map on **page 91 >**

Location	Type
On site	**Zone 3 - (Fluvial Models)**

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding

8.1 Surface water flooding

Highest risk on site	**1 in 30 year, Greater than 1.0m**
Highest risk within 50m	**1 in 30 year, Greater than 1.0m**

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on **page 96 >**

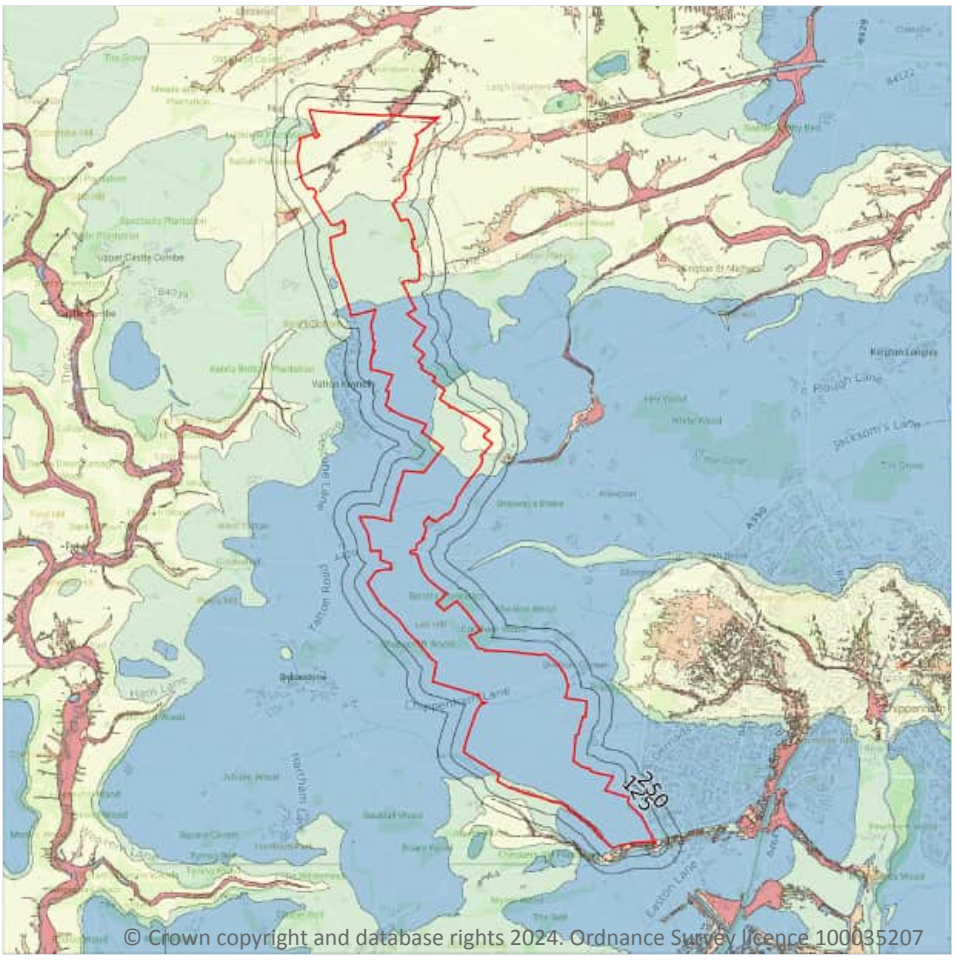

The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Greater than 1.0m
1 in 250 year	Greater than 1.0m
1 in 100 year	Greater than 1.0m
1 in 30 year	Greater than 1.0m

This data is sourced from Ambiental Risk Analytics.

Special Areas of Conservation (SAC)

Local Nature Reserves (LNR)

Designated Ancient Woodland

Green Belt

10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m	1

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

Features are displayed on the Environmental designations map on **page 99 >**

ID	Location	Name	Data source
11	1405m W	West Yatton Down	Natural England

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m	0

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m	0

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m	0

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m	0

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m	0

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m	19

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

Features are displayed on the Environmental designations map on **page 99 >**

ID	Location	Name	Woodland Type
1	**On site**	**Unknown**	**Ancient & Semi-Natural Woodland**
2	27m S	Unknown	Ancient & Semi-Natural Woodland
3	422m S	Jubilee Wood	Ancient & Semi-Natural Woodland

17	1561m NE	Easton Wood	Ancient & Semi-Natural Woodland

ID	Location	Name	Woodland Type
18	1650m NE	Priory Wood	Ancient & Semi-Natural Woodland
19	1676m N	Stanton Park	Ancient & Semi-Natural Woodland
20	1735m SW	Mercombe Wood	Ancient & Semi-Natural Woodland

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m	0

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m	0

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m	0

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m	0

Areas designated to prevent urban sprawl by keeping land permanently open.

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m	0

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m	0

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m	0

Special Protection Areas (SPAs) are areas designated (or ‘classified’) under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.15 Nitrate Sensitive Areas

Records within 2000m	0

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones

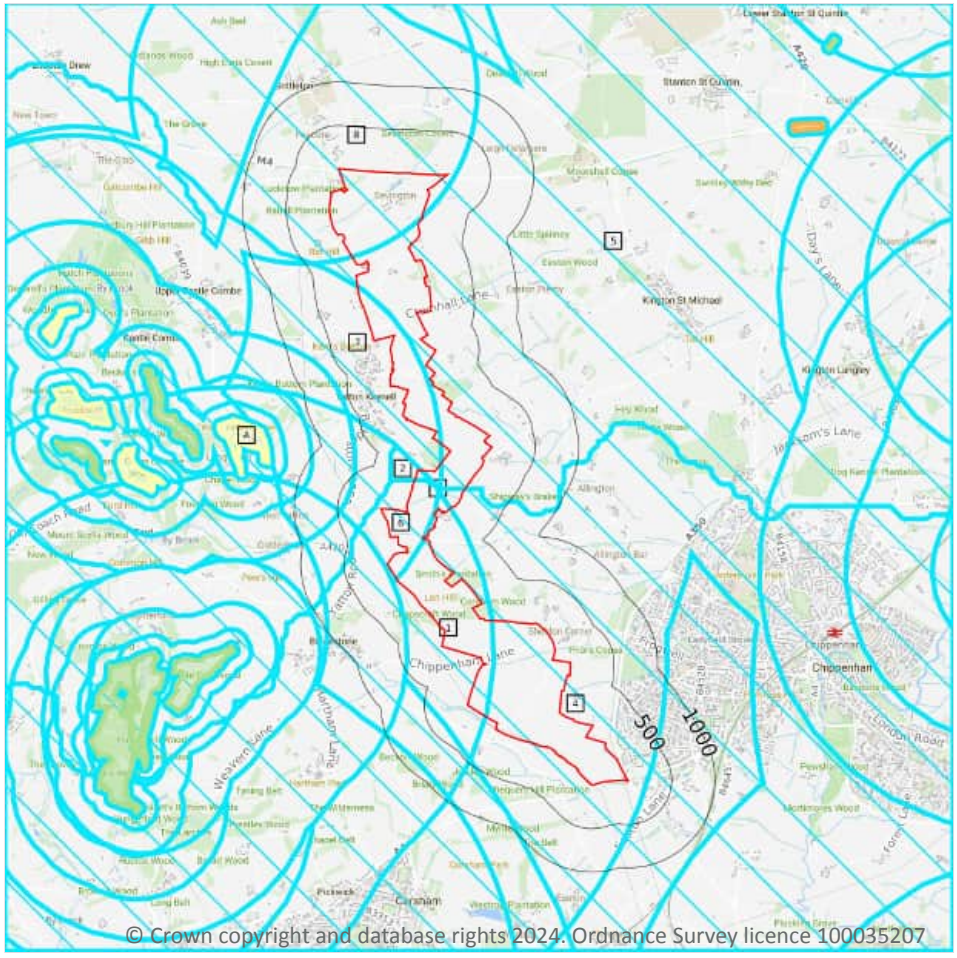

Records within 2000m	**1**

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

Location	Name	Type	NVZ ID	Status
1872m S	Bydemill Bk - source to conf RIver Avon (Brist) NVZ	Surface Water	560	Existing

This data is sourced from Natural England.

10.18 SSSI Units

Records within 2000m	**1**

Divisions of SSSIs used to record management and condition details. Units are the smallest areas for which Natural England gives a condition assessment, however, the size of units varies greatly depending on the types of management and the conservation interest.

Features are displayed on the SSSI Impact Zones and Units map on **page 105 >**

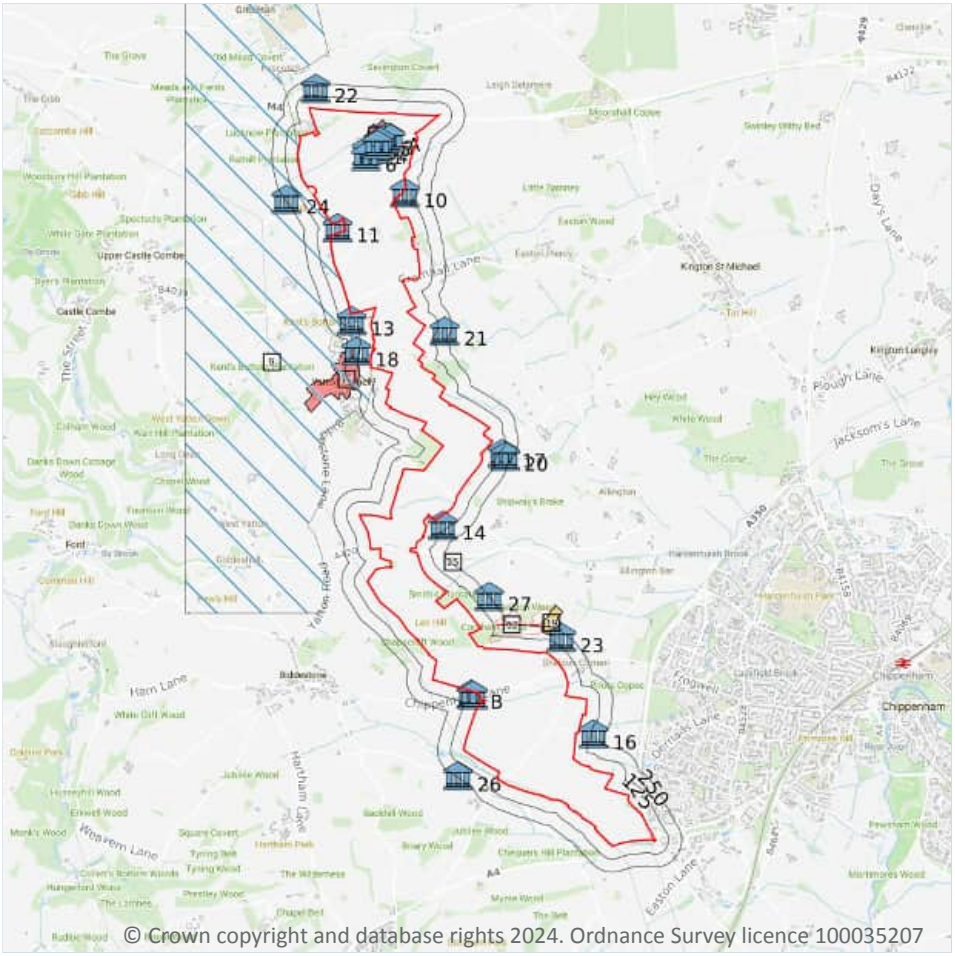

ID: A
Location: 1405m W
SSSI name: West Yatton Down
Unit name: 1
Broad habitat: Calcareous Grassland - Lowland
Condition: Unfavourable - Recovering
Reportable features:

Feature name	Feature condition	Date of assessment
Lowland calcareous grassland (CG3-5)	Favourable	10/10/2006

Feature name	Feature condition	Date of assessment
Population of nationally scarce butterfly species - Hamearis lucina, Duke of Burgundy	Unfavourable - Recovering	07/12/2009

- World Heritage Sites

11.1 World Heritage Sites

Records within 250m	0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m	1

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

Features are displayed on the Visual and cultural designations map on **page 109 >**

ID	Location	NAME	Data Source
9	**On site**	**Cotswolds**	**Natural England**

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m	0

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m	25

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

11.5 Conservation Areas

Records within 250m	2

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

Features are displayed on the Visual and cultural designations map on **page 109 >**

ID	Location	Name	District	Date of designation
8	**On site**	**Sevington**	**Wiltshire**	**unknown**
15	112m NW	Yatton Keynell	Wiltshire	unknown

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m	2

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

Features are displayed on the Visual and cultural designations map on **page 109 >**

ID	Location	Ancient monument name	Reference number
12	56m S	Medieval settlement of Sheldon	1018428
25	234m S	Lanhill Barrow: a long barrow 300m south of Sparrow Farm	1010908

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.7 Registered Parks and Gardens

Records within 250m	1

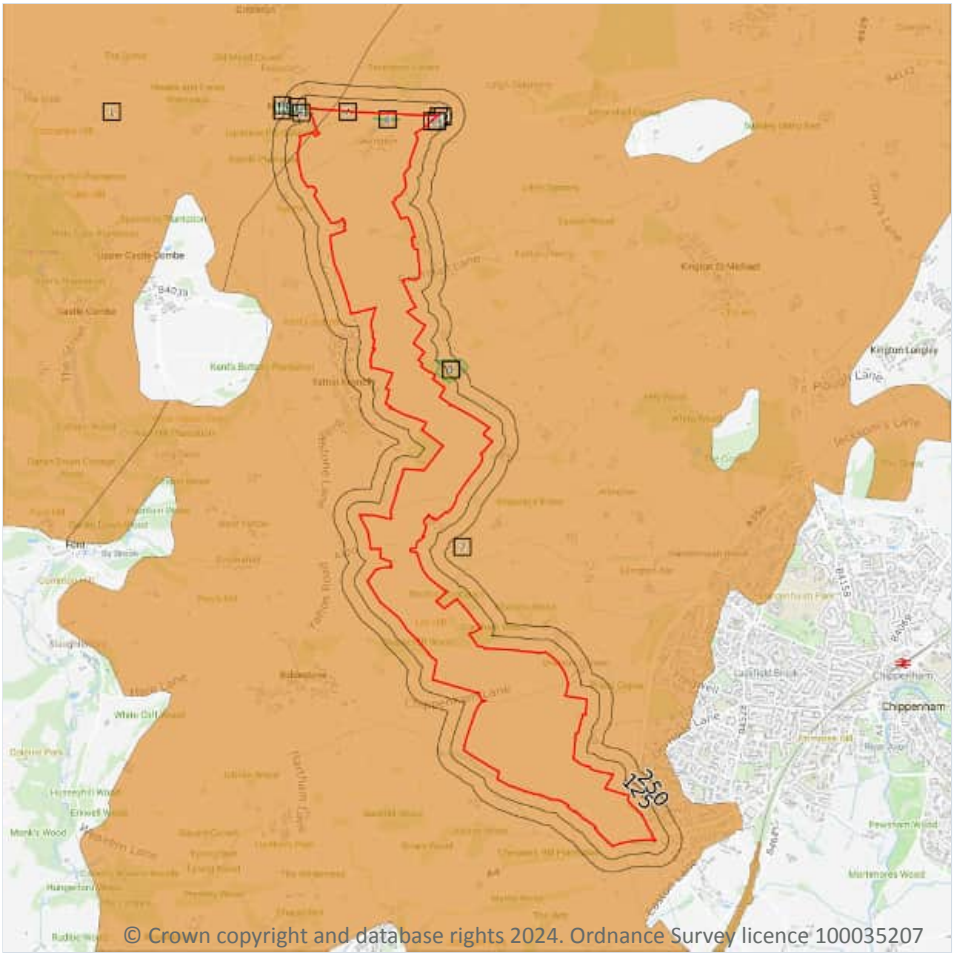

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

Features are displayed on the Visual and cultural designations map on **page 109 >**

ID	Location	Name	Grade
19	166m SE	Sheldon Manor	II

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

12 Agricultural designations

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

12.1 Agricultural Land Classification

Records within 250m	2

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on **page 114 >**

ID	Location	Classification	Description
1	On site	Grade 3	Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.

ID	Location	Classification	Description
2	**On site**	**Grade 3**	**Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.**

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m	**0**

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m	**11**

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

Features are displayed on the Agricultural designations map on **page 114 >**

ID	Location	Description	Reference	Application date
3	**On site**	**Selective Fell/Thin (Unconditional)**	**018/366/15-16**	**-**

This data is sourced from the Forestry Commission.

12.4 Environmental Stewardship Schemes

Records within 250m **9**

Environmental Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. The schemes identified may be historical schemes that have now expired, or may still be active.

Location	Reference	Scheme	Start Date	End date
On site	**AG00608072**	**Organic Entry Level Stewardship**	**01/10/2014**	**30/09/2019**
On site	**AG00404267**	**Entry Level plus Higher Level Stewardship**	**01/12/2012**	**30/11/2022**

This data is sourced from Natural England.

12.5 Countryside Stewardship Schemes

Records within 250m **55**

Countryside Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. Main objectives are to improve the farmed environment for wildlife and to reduce diffuse water pollution.

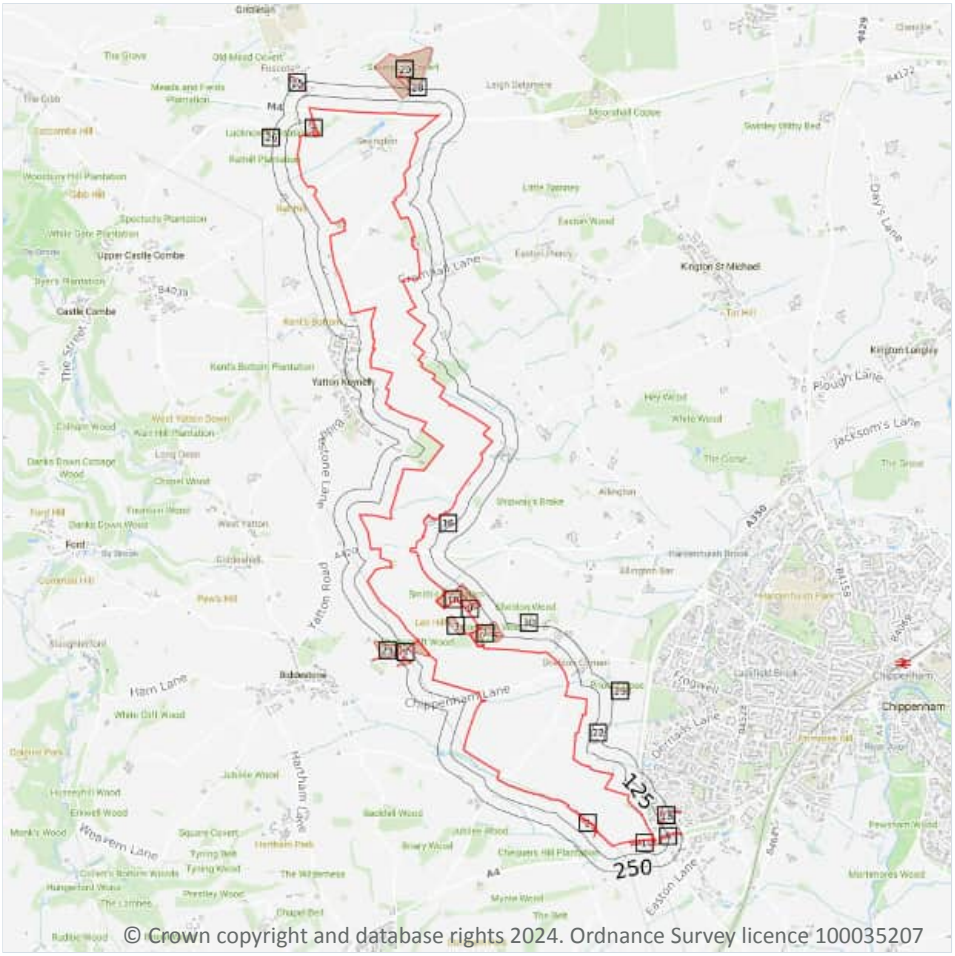

Location	Reference	Scheme	Start Date	End Date

29	243m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
30	247m SE	Deciduous woodland	Main habitat: DWOOD (INV > 50%)

This data is sourced from Natural England.

13.2 Habitat Networks

Records within 250m	0

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m	0

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

This data is sourced from Natural England.

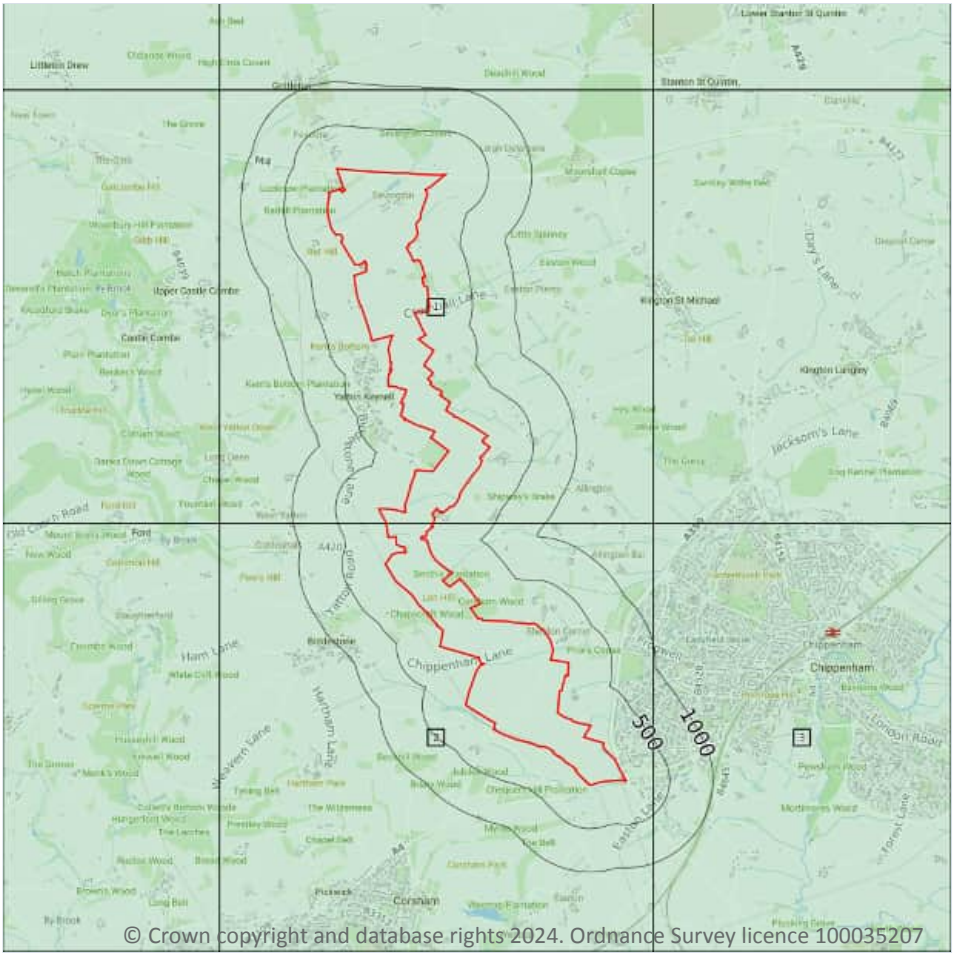

13.4 Limestone Pavement Orders

Records within 250m	0

Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

Geology 1:10,000 scale - Artificial and made ground

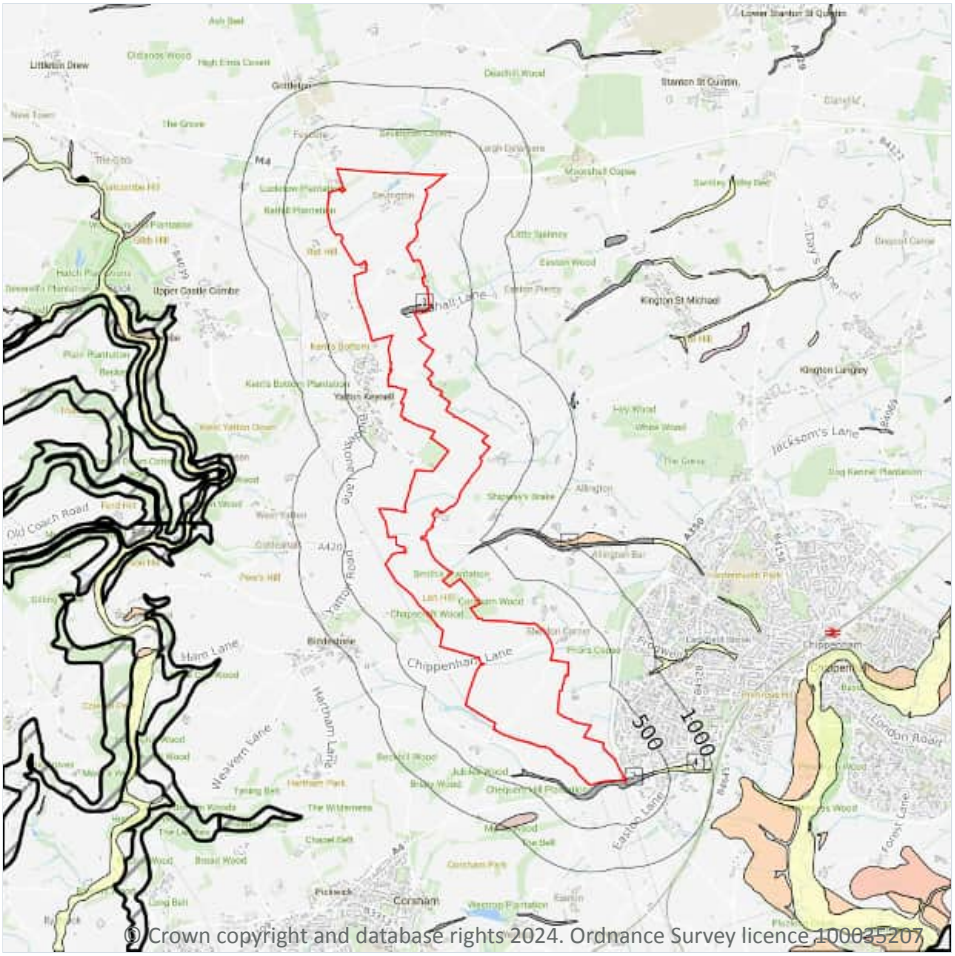

14.2 Artificial and made ground (10k)

Records within 500m	0

Details of made, worked, infilled, disturbed and landscaped ground at 1:10,000 scale. Artificial ground can be associated with potentially contaminated material, unpredictable engineering conditions and instability.

This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Superficial

Site Outline

Search buffers in metres (m)

Landslip (10k)

Superficial geology (10k)
Please see table for more details.

14.3 Superficial geology (10k)

Records within 500m **4**

Superficial geological deposits at 1:10,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:10,000 scale - Superficial map on **page 124 >**

14.6 Bedrock faults and other linear features (10k)

Records within 500m	**12**

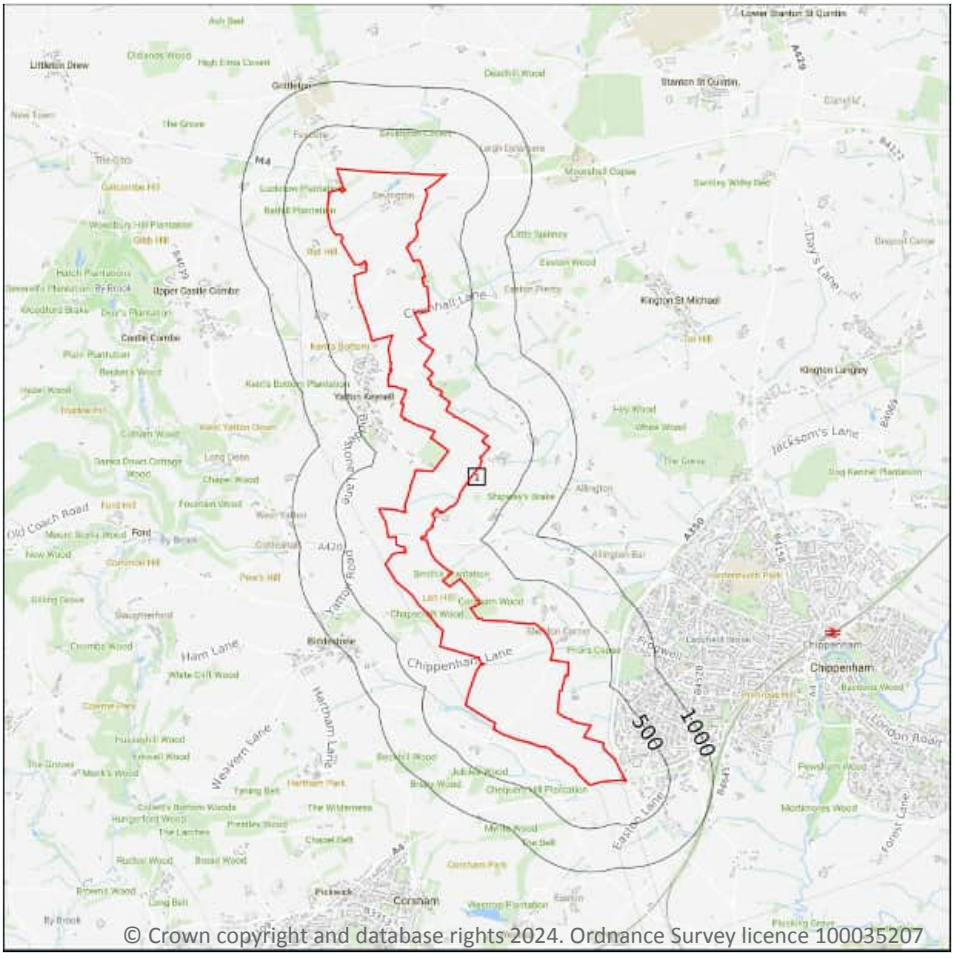

Linear features at the ground or bedrock surface at 1:10,000 scale of six main types; rock, fault, fold axis, mineral vein, alteration area or landform. Features are either observed or inferred, and relate primarily to bedrock.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 126 >**

ID	Location	Category	Description
17	**On site**	**FAULT**	**Normal fault, inferred**
18	**On site**	**FAULT**	**Normal fault, inferred**
19	**On site**	**FAULT**	**Normal fault, observed**
20	**On site**	**FAULT**	**Normal fault, observed**
21	**On site**	**FAULT**	**Normal fault, observed**
22	**On site**	**FAULT**	**Normal fault, inferred**

Geological map tile

15.1 50k Availability

Records within 500m	1

An indication on the coverage of 1:50,000 scale geology data for the site. Either 'Full' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:50,000 scale - Availability map on **page 129 >**

ID	Location	Artificial	Superficial	Bedrock	Mass movement	Sheet No.
1	**On site**	**No coverage**	**Full**	**Full**	**Full**	**EW265_bath_v4**

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Artificial and made ground

15.2 Artificial and made ground (50k)

Records within 500m	0

Details of made, worked, infilled, disturbed and landscaped ground at 1:50,000 scale. Artificial ground can be associated with potentially contaminated material, unpredictable engineering conditions and instability.

This data is sourced from the British Geological Survey.

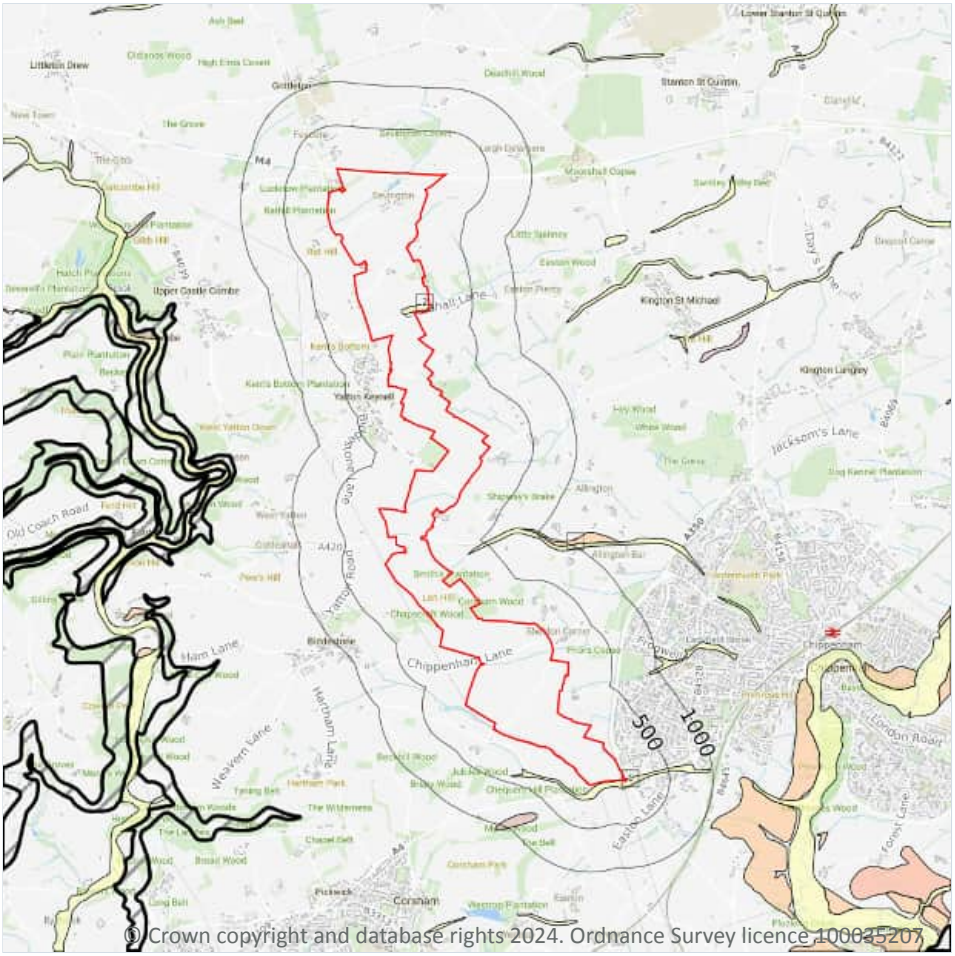

15.3 Artificial ground permeability (50k)

Records within 50m	0

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any artificial deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Superficial

Site Outline

Search buffers in metres (m)

Landslip (50k)

Superficial geology (50k)
Please see table for more details.

15.4 Superficial geology (50k)

Records within 500m **3**

Superficial geological deposits at 1:50,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:50,000 scale - Superficial map on **page 131 >**

ID	Location	LEX Code	Description	Rock description
1	**On site**	**ALV-XCZSV**	**ALLUVIUM**	**CLAY, SILT, SAND AND GRAVEL**

3	292m S	ALV-XCZSV	ALLUVIUM	CLAY, SILT, SAND AND GRAVEL

This data is sourced from the British Geological Survey.

15.5 Superficial permeability (50k)

Records within 50m	2

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any superficial deposits (the zone between the land surface and the water table).

Location	Flow type	Maximum permeability	Minimum permeability
On site	**Intergranular**	**High**	**Very Low**
On site	**Intergranular**	**High**	**Very Low**

This data is sourced from the British Geological Survey.

15.6 Landslip (50k)

Records within 500m	0

Mass movement deposits on BGS geological maps at 1:50,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.

15.7 Landslip permeability (50k)

Records within 50m	0

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any landslip deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Bedrock

17 Natural ground subsidence - Shrink swell clays

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.1 Shrink swell clays

Records within 50m	6

The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

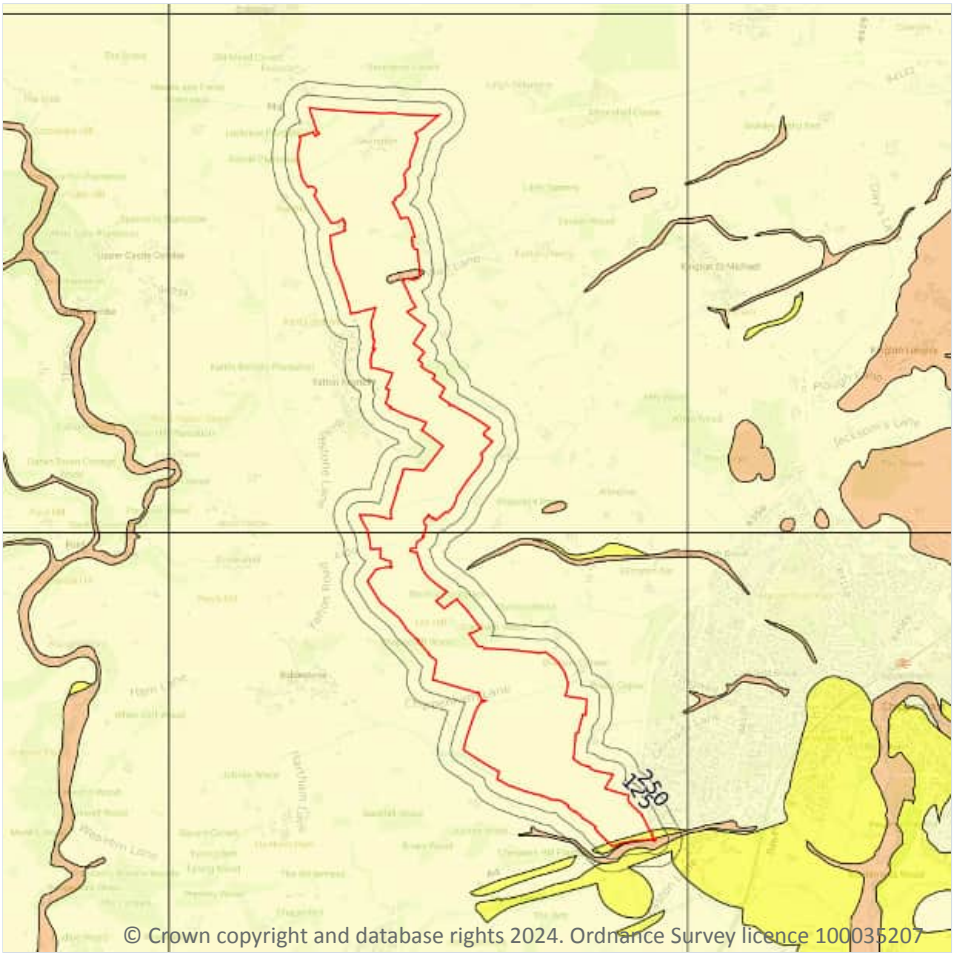

Features are displayed on the Natural ground subsidence - Shrink swell clays map on **page 140 >**

Location	Hazard rating	Details
On site	**Negligible**	**Ground conditions predominantly non-plastic.**
On site	**Very low**	**Ground conditions predominantly low plasticity.**
On site	**Low**	**Ground conditions predominantly medium plasticity.**

Location	Hazard rating	Details
On site	**Moderate**	**Ground conditions predominantly high plasticity.**
7m SE	Negligible	Ground conditions predominantly non-plastic.
24m N	Very low	Ground conditions predominantly low plasticity.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.2 Running sands

Records within 50m	3

The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

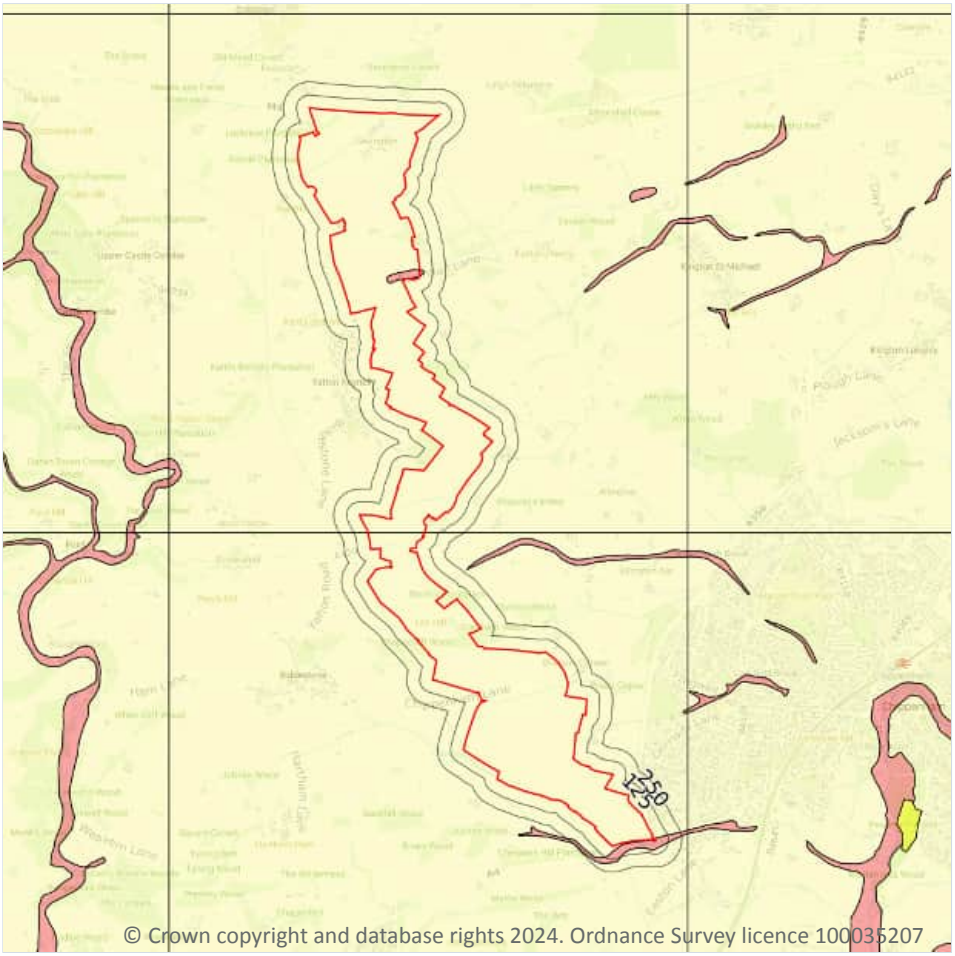

Features are displayed on the Natural ground subsidence - Running sands map on **page 142 >**

Location	Hazard rating	Details
On site	**Negligible**	**Running sand conditions are not thought to occur whatever the position of the water table. No identified constraints on lands use due to running conditions.**

Location	Hazard rating	Details
On site	**Very low**	**Running sand conditions are unlikely. No identified constraints on land use due to running conditions unless water table rises rapidly.**
On site	**Low**	**Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.3 Compressible deposits

Records within 50m	2

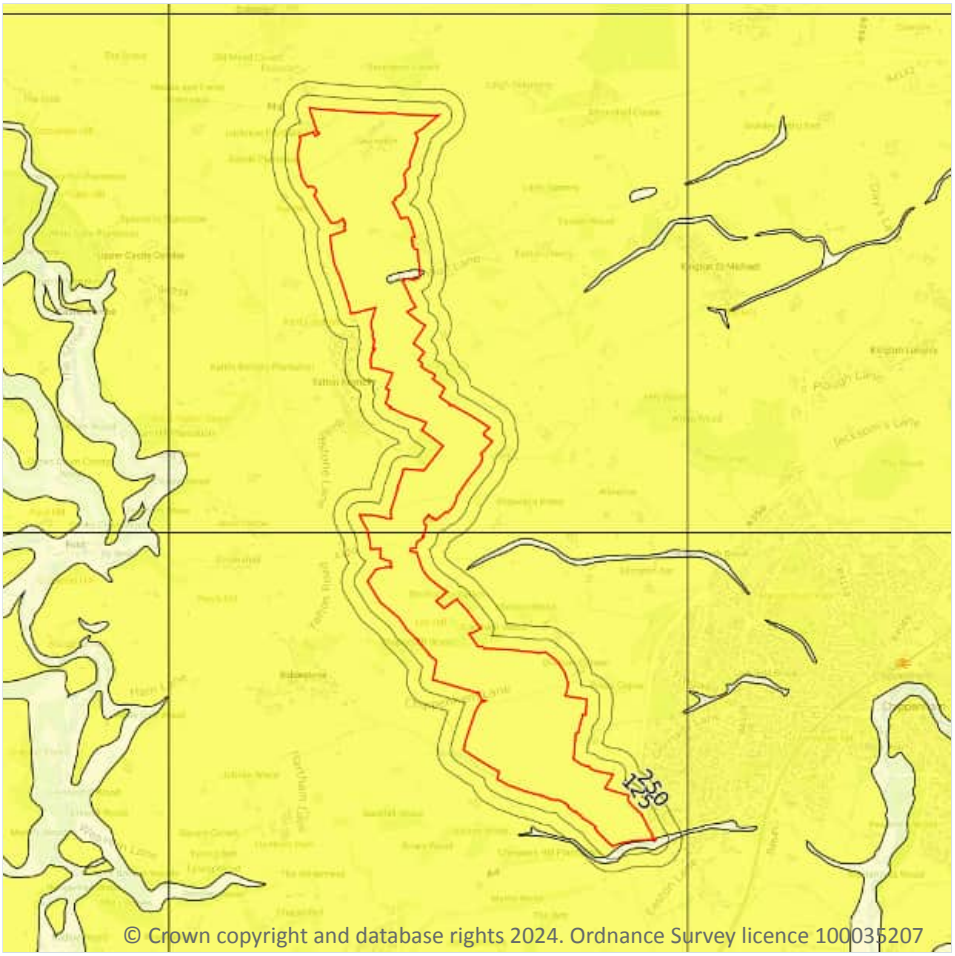

The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

Features are displayed on the Natural ground subsidence - Compressible deposits map on **page 144 >**

Location	Hazard rating	Details
On site	**Negligible**	**Compressible strata are not thought to occur.**
On site	**Moderate**	**Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Collapsible deposits

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.4 Collapsible deposits

Records within 50m	2

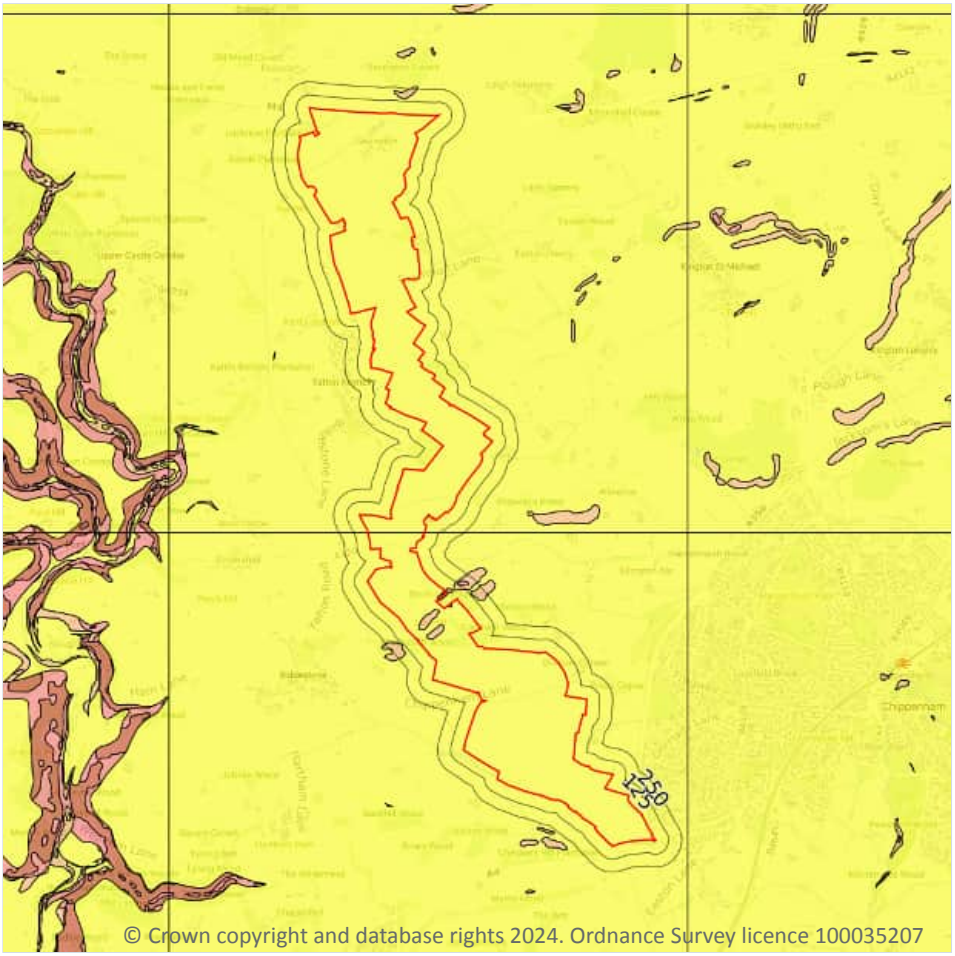

The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on **page 146 >**

Location	Hazard rating	Details
On site	**Negligible**	**Deposits with potential to collapse when loaded and saturated are believed not to be present.**
On site	**Very low**	**Deposits with potential to collapse when loaded and saturated are unlikely to be present.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Landslides

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.5 Landslides

Records within 50m	3

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

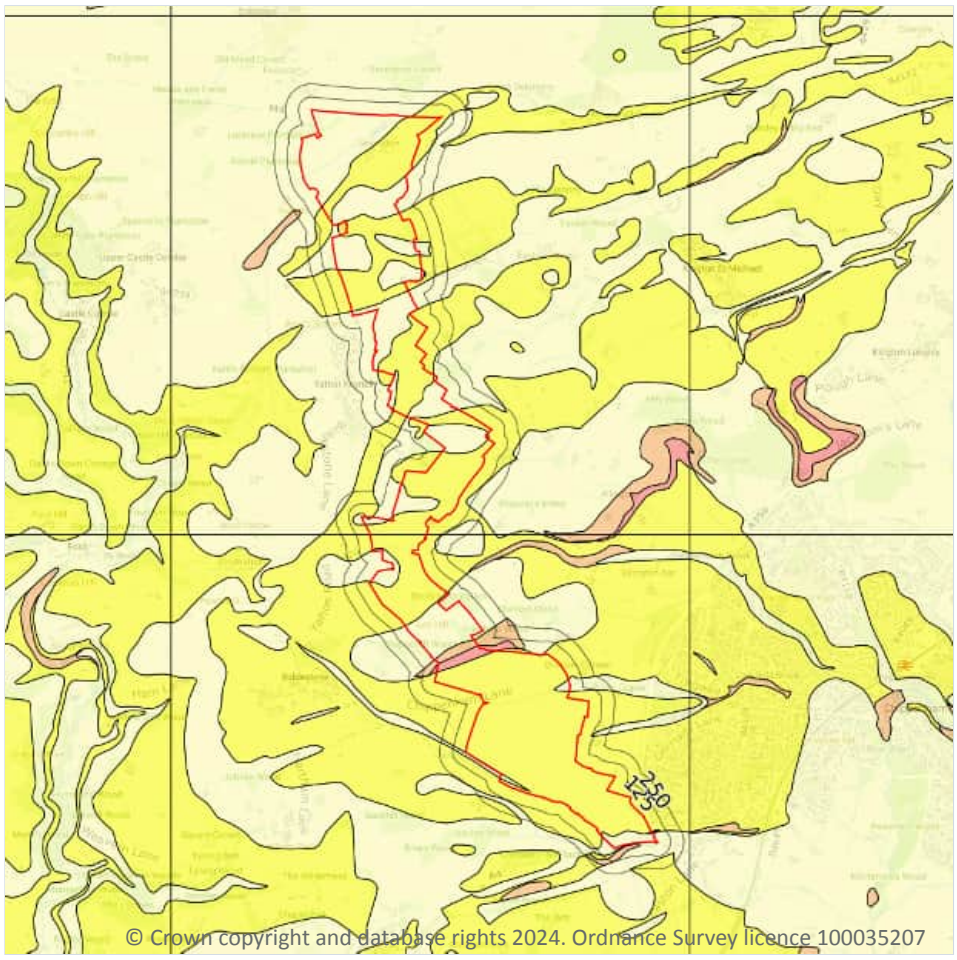

Features are displayed on the Natural ground subsidence - Landslides map on **page 147 >**

Location	Hazard rating	Details
On site	**Very low**	**Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.**

Location	Hazard rating	Details
On site	**Low**	**Slope instability problems may be present or anticipated. Site investigation should consider specifically the slope stability of the site.**
On site	**Moderate**	**Slope instability problems are probably present or have occurred in the past. Land use should consider specifically the stability of the site.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.6 Ground dissolution of soluble rocks

Records within 50m	7

The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

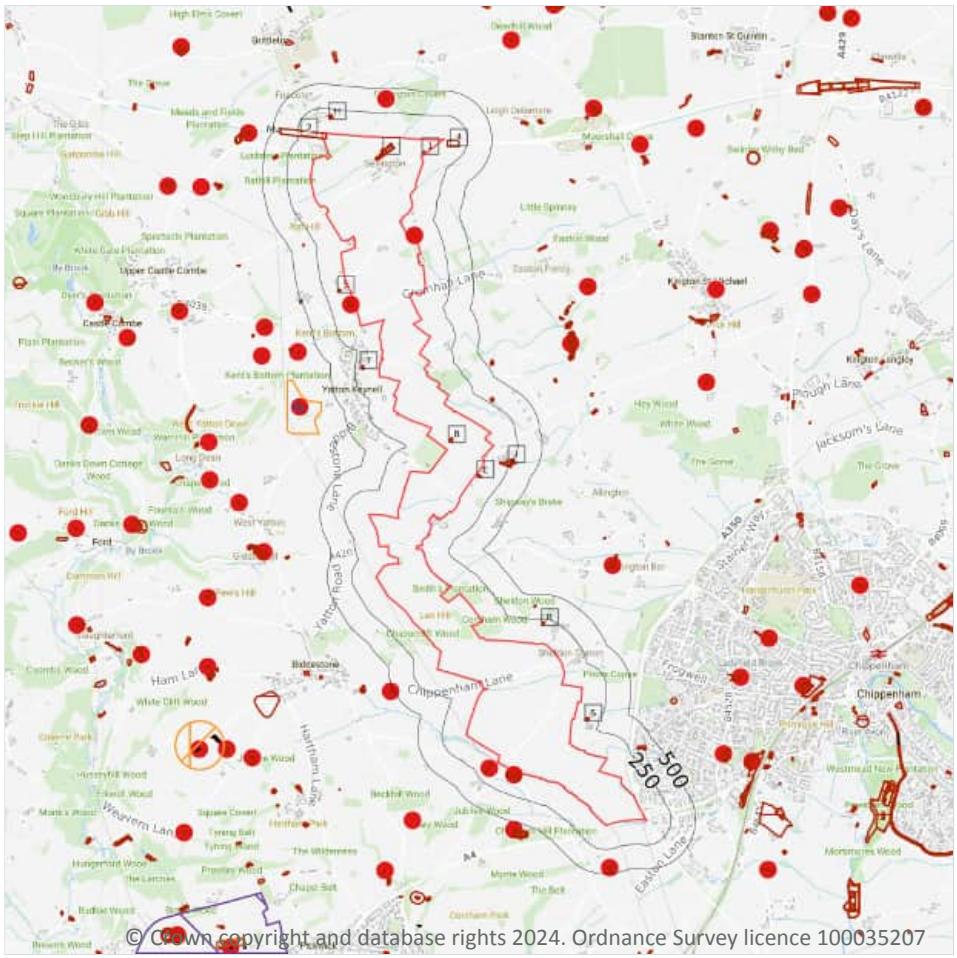

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on **page 149 >**

Location	Hazard rating	Details
On site	**Negligible**	**Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.**

Location	Hazard rating	Details
On site	**Very low**	**Soluble rocks are present within the ground. Few dissolution features are likely to be present. Potential for difficult ground conditions or localised subsidence are at a level where they need not be considered.**
On site	**Low**	**Soluble rocks are present within the ground. Some dissolution features may be present. Potential for difficult ground conditions are at a level where they may be considered, localised subsidence need not be considered except in exceptional circumstances.**
On site	**Moderate**	**Soluble rocks are present within the ground. Many dissolution features may be present. Potential for difficult ground conditions are at a level where they should be considered. Potential for subsidence is at a level where it may need to be considered.**
7m SE	Very low	Soluble rocks are present within the ground. Few dissolution features are likely to be present. Potential for difficult ground conditions or localised subsidence are at a level where they need not be considered.
12m SE	Low	Soluble rocks are present within the ground. Some dissolution features may be present. Potential for difficult ground conditions are at a level where they may be considered, localised subsidence need not be considered except in exceptional circumstances.
24m N	Low	Soluble rocks are present within the ground. Some dissolution features may be present. Potential for difficult ground conditions are at a level where they may be considered, localised subsidence need not be considered except in exceptional circumstances.

This data is sourced from the British Geological Survey.

This is data is sourced from Ordnance Survey/Groundsure.

18.3 Underground workings

Records within 1000m	0

Historical land uses identified from Ordnance Survey mapping that indicate the presence of underground workings e.g. mine shafts.

This is data is sourced from Ordnance Survey/Groundsure.

18.4 Underground mining extents

Records within 500m	0

This data identifies underground mine workings that could present a potential risk, including adits and seam workings. These features have been identified from BGS Geological mapping and mine plans sourced from the BGS and various collections and sources.

This data is sourced from Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m	0

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m	1

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

Features are displayed on the Mining and ground workings map on **page 151 >**

ID	Location	Name	Commodity	Class	Likelihood
S	653m NW	Yatton Kaynell	Limestone	C	Underground mine workings may have occurred in the past, or current mines may be operating to modern engineering standards. Potential for difficult ground conditions should be considered.

This data is sourced from the British Geological Survey.

18.7 JPB mining areas

Records on site	0

Areas which could be affected by former coal and other mining. This data includes some mine plans unavailable to the Coal Authority.

This data is sourced from Johnson Poole and Bloomer.

18.8 The Coal Authority non-coal mining

Records within 500m	0

This data provides an indication of the potential zone of influence of recorded underground non-coal mining workings. Any and all analysis and interpretation of Coal Authority Data in this report is made by Groundsure, and is in no way supported, endorsed or authorised by the Coal Authority. The use of the data is restricted to the terms and provisions contained in this report. Data reproduced in this report may be the copyright of the Coal Authority and permission should be sought from Groundsure prior to any re-use.

This data is sourced from The Coal Authority.

18.9 Researched mining

Records within 500m	0

This data indicates areas of potential mining identified from alternative or archival sources, including; BGS Geological paper maps, Lidar data, aerial photographs (from World War II onwards), archaeological data services, websites, Tithe maps, and various text/plans from collected books and reports. Some of this data is approximate and Groundsure have interpreted the resultant risk area and, where possible, specific areas of risk have been captured.

This data is sourced from Groundsure.

18.10 Mining record office plans

Records within 500m	0

This dataset is representative of Mining Record Office and/or plan extents held by Groundsure and should be considered approximate. Where possible, plans have been located and any specific areas of risk they depict have been captured.

This data is sourced from Groundsure.

18.11 BGS mine plans

Records within 500m	0

This dataset is representative of BGS mine plans held by Groundsure and should be considered approximate. Where possible, plans have been located and any specific areas of risk they depict have been captured.

This data is sourced from Groundsure.

18.12 Coal mining

Records on site	0

Areas which could be affected by past, current or future coal mining.

This data is sourced from the Coal Authority.

18.13 Brine areas

Records on site	0

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.14 Gypsum areas

Records on site	0

Generalised areas that may be affected by gypsum extraction.

This data is sourced from British Gypsum.

18.15 Tin mining

Records on site	0

Generalised areas that may be affected by historical tin mining.

This data is sourced from Groundsure.

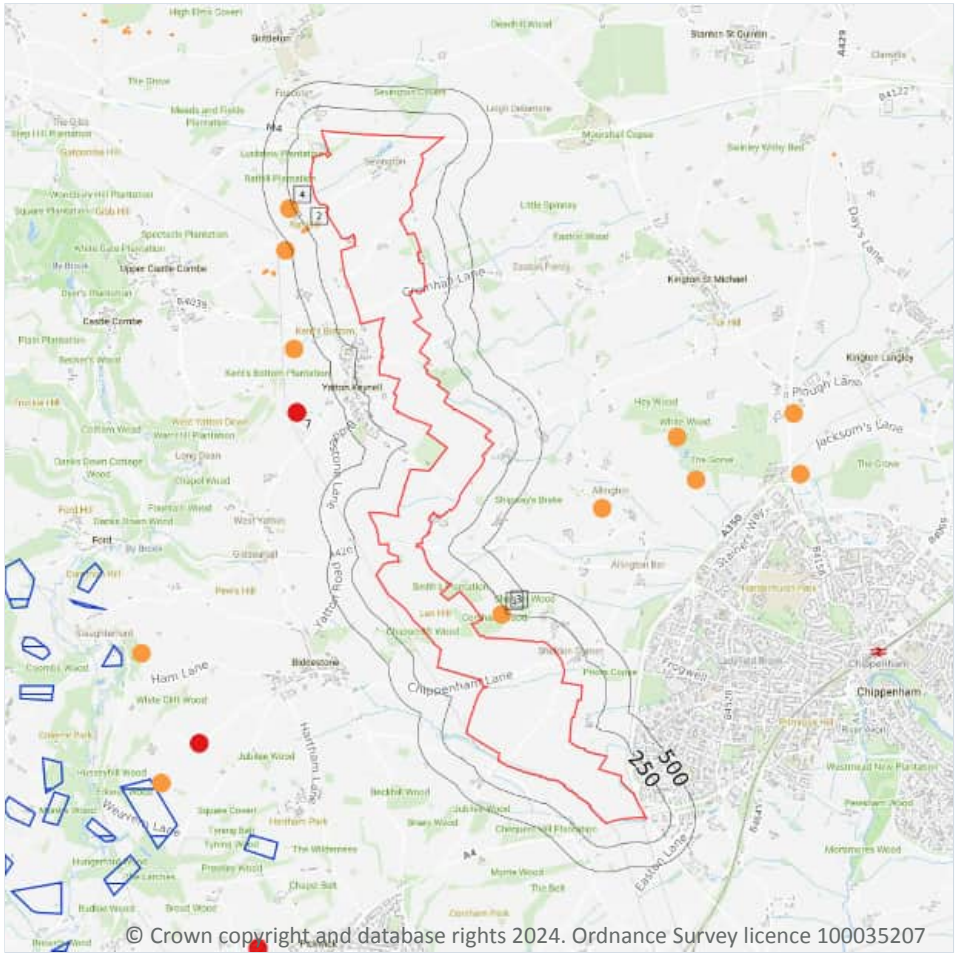

18.16 Clay mining

Records on site	0

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Ground cavities and sinkholes

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

19.1 Natural cavities

Records within 500m	0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Stantec UK Ltd.

19.2 Mining cavities

Records within 1000m	1

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

Features are displayed on the Ground cavities and sinkholes map on **page 159 >**

ID	Location	Mine Address	Mineral	Data source	Publisher
7	931m NW	Yatton Keynell, Wiltshire	Bath Stone, Cornstone, Limestone	GEOLOGY OF THIS COUNTRY OF ENGLAND AND WALES	KELLY AND CO.

This data is sourced from Stantec UK Ltd.

19.3 Reported recent incidents

Records within 500m	0

This data identifies sinkhole information gathered from media reports and Groundsure's own records. This data goes back to 2014 and includes relative accuracy ratings for each event and links to the original data sources. The data is updated on a regular basis and should not be considered a comprehensive catalogue of all sinkhole events. The absence of data in this database does not mean a sinkhole definitely has not occurred during this time.

This data is sourced from Groundsure.

19.4 Historical incidents

Records within 500m	0

This dataset comprises an extract of 1:10,560, 1:10,000, 1:2,500 and 1:1,250 scale historical Ordnance Survey maps held by Groundsure, dating back to the 1840s. It shows shakeholes, deneholes and other 'holes' as noted on these maps. Dene holes are medieval chalk extraction pits, usually comprising a narrow shaft with a number of chambers at the base of the shaft. Shakeholes are an alternative name for suffusion sinkholes, most commonly found in the limestone landscapes of North Yorkshire but also extensively noted around the Brecon Beacons National Park.

Not all 'holes' noted on Ordnance Survey mapping will necessarily be present within this dataset.

This data is sourced from Groundsure.

19.5 National karst database

Records within 500m	4

This is a comprehensive database of national karst information gathered from a wide range of sources. BGS have collected data on five main types of karst feature: Sinkholes, stream links, caves, springs, and incidences of associated damage to buildings, roads, bridges and other engineered works.

Since the database was set up in 2002 data covering most of the evaporite karst areas of the UK have now been added, along with data covering about 60% of the Chalk, and 35% of the Carboniferous Limestone outcrops. Many of the classic upland karst areas have yet to be included. Recorded so far are: Over 800 caves, 1300 stream sinks, 5600 springs, 10,000 sinkholes.

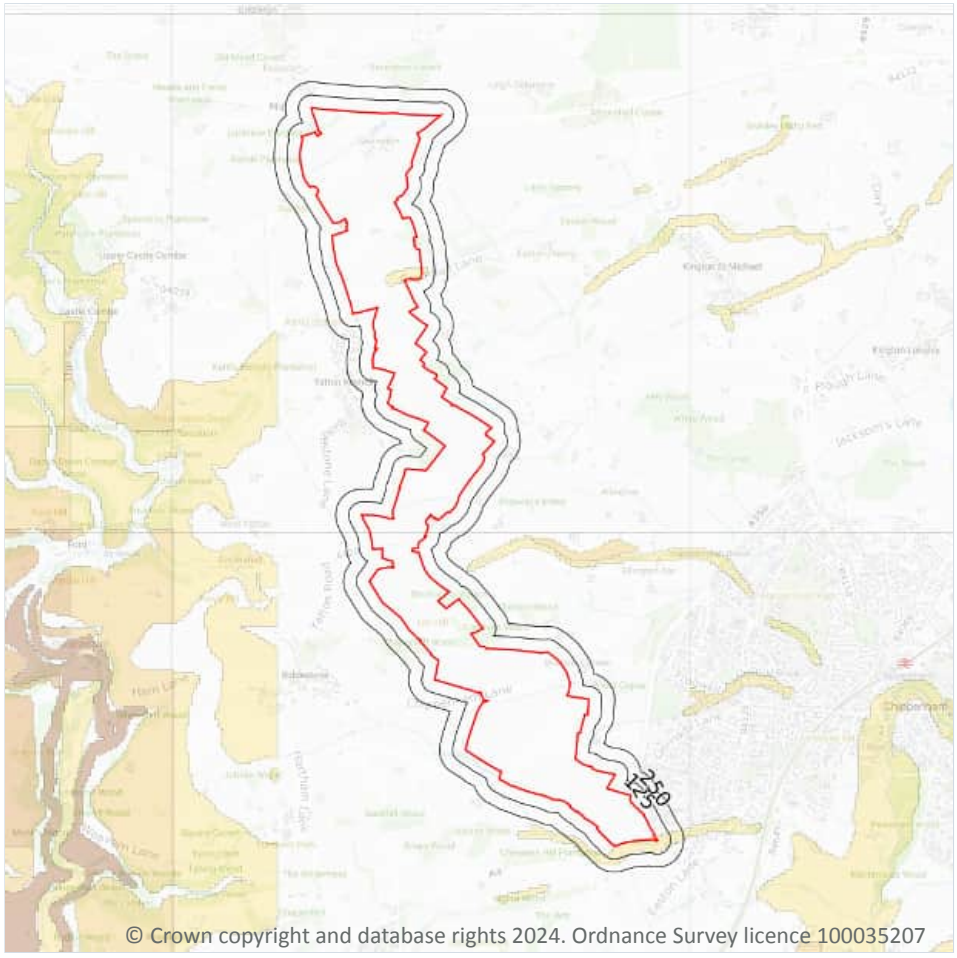

The database is not yet complete, and not all records have been verified. The absence of data does not mean that karst features are not present at a site. A reliability rating is included with each record.

Features are displayed on the Ground cavities and sinkholes map on **page 159 >**

ID	Location	Name	Reliability
1	195m S	-	Probable
2	225m NW	-	Good
3	245m SE	-	Probable
4	293m NW	West Seavington Farm sink	Good

This data is sourced from the British Geological Survey.

20 Radon

Site Outline

Search buffers in metres (m)

- Greater than 30%
- Between 10% and 30%
- Between 5% and 10%
- Between 3% and 5%
- Between 1% and 3%
- Less than 1%

20.1 Radon

Records on site	2

The Radon Potential data classifies areas based on their likelihood of a property having a radon level at or above the Action Level in Great Britain. The dataset is intended for use at 1:50,000 scale and was derived from both geological assessments and indoor radon measurements (more than 560,000 records). A minimum 50m buffer should be considered when searching the maps, as the smallest detectable feature at this scale is 50m. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain (1:100,000 scale).

Features are displayed on the Radon map on **page 162 >**

Location	Estimated properties affected	Radon Protection Measures required
On site	**Between 1% and 3%**	**None**

Location	Estimated properties affected	Radon Protection Measures required
On site	**Less than 1%**	**None**

This data is sourced from the British Geological Survey and UK Health Security Agency.

21 Soil chemistry

21.1 BGS Estimated Background Soil Chemistry

Records within 50m **167**

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km^2. In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km^2; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

This data is sourced from the British Geological Survey.

21.2 BGS Estimated Urban Soil Chemistry

Records within 50m	0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km^2).

This data is sourced from the British Geological Survey.

21.3 BGS Measured Urban Soil Chemistry

Records within 50m	0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km^2.

This data is sourced from the British Geological Survey.

22 Railway infrastructure and projects

22.1 Underground railways (London)

Records within 250m	0

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

22.2 Underground railways (Non-London)

Records within 250m	0

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

22.3 Railway tunnels

Records within 250m	0

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

22.4 Historical railway and tunnel features

Records within 250m	0

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

This data is sourced from Ordnance Survey/Groundsure.

22.5 Royal Mail tunnels

Records within 250m	0

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

22.6 Historical railways

Records within 250m	0

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

This data is sourced from OpenStreetMap.

22.7 Railways

Records within 250m	0

Currently existing railway lines, including standard railways, narrow gauge, funicular, trams and light railways.

This data is sourced from Ordnance Survey and OpenStreetMap.

22.8 Crossrail 1

Records within 500m	0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

22.9 Crossrail 2

Records within 500m	0

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

This data is sourced from publicly available information by Groundsure.

22.10 HS2

Records within 500m	0

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 ltd.

Data providers

Groundsure works with respected data providers to bring you the most relevant and accurate information. To find out who they are and their areas of expertise see https://www.groundsure.com/sources-reference ↗.
