Document Reference: APP/6.3

APFP Regulation 5(2)(a)

Schedule of Changes

Revision	Section Reference	Description of Changes	Reason for Revision
2	Table 4	Updates in relation to non-coal mining and materials and land contamination evidence,	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Table 4	Updates in relation to hydrogeology.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Table 4	Updates in relation to hydrology.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Paragraph 1.2.20	Updates in relation to the site walkover.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Paragraph 1.3.3	Updates in relation to the conceptual site model.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Table 7	Updates in relation to potential sources, pathways and receptors.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Paragraph 1.3.12 to Paragraph 1.3.14	Updates in relation to temporary works.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Paragraph 1.4.8	Updates in relation to hydrogeology.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Paragraph 1.4.11	Updates in relation to the preliminary risk assessment conclusions.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
	Paragraph 1.4.12	Updates in relation to preliminary geotechnical considerations.	Updates in response to EA Relevant Representation for Deadline 1 of Examination.
3	Paragraph 1.4.11	Clarifications in relation to ground investigation.	Updates in response to EA Comments for Deadline 3 of Examination.
	Paragraph 1.3.13, 1.4.11 and 1.4.12	Correction of reference to 9.13 Cable Route Avoidance Areas - Preliminary Geotechnical Risk Register [REP1-129].	Updates in response to EA Comments for Deadline 3 of Examination.
	Paragraph 1.4.12	Clarification permits and permissions will be sought should geohazards be identified.	Updates in response to EA Comments for Deadline 3 of Examination.

Appendix 19-8: Lime Down Southwest Corridor, Phase 1 Desk Study, Conceptual Site Model and Preliminary Risk Assessment

1.1 Introduction

1.1.1 Geosyntec Consultants Limited (Geosyntec) was commissioned by the Applicant prepare the Ground Conditions chapter of the Environmental Statement (ES) for the Scheme. The PV and BESS infrastructure would be located across five land parcels (Lime Down A–E), collectively known as the Solar PV Sites. **Appendix 19-16: Preliminary Risk Assessment Approach and Methodology [EN010168/APP/6.3]** presents the Phase 1 desk study information to allow the development of the initial Conceptual Site Model (CSM) and Preliminary Risk Assessment (PRA) to inform the baseline for **ES Volume 1, Chapter 19: Ground Conditions [EN010168/APP/6.1]**.

Sources of Information

1.1.2 This report has been prepared using a combination of published records (e.g. British Geological Survey (BGS), Environment Agency, Defra) and information provided by the Applicant. These include statutory records and historical mapping supplied within a Groundsure Report, published geological and hydrogeological mapping and historical borehole records.

1.1.3 Specific information sources are referenced throughout the document and are summarised in **Table 1** below. document and are summarised in **Table 1** below. Copies of historical mapping can be found in Annex 19-8-1.

1.2 Site Context

Site Location and Description

1.2.1 The Site location and description for Lime Down Southwest Corridor are included **Table 2** below.

Table 2: Site Location and Description

Site Location and Description	
Site Location	The Site lies in Corsham town, Wiltshire, and is broadly orientated northeast to southwest between the villages of Easton and Whitley.  
Site Description	The corridor route comprises an irregular shaped piece over approximately 4.5 km length.

Site Location and Description	
	The Site is predominantly agricultural comprising fields, hedges and trees and sporadic ponds and ditches/streams. Garstard village, residential properties and agricultural buildings lie adjacent to the Site. With respect to watercourse, the Byde Mill Brook is present in the north of Site orientated northwest to southeast. Additional unnamed water channels are present in the south, these are unnamed tributaries of the River Avon which is located approximately 3.3 km east at its closest point.
Infrastructure	The double tracked Great Western Main Line railway (Engineers Line Reference (ELR): MLN1) crosses the north of Site and lies within cutting. The north is bound by an unnamed road to Notton. Roads that cross the Site include Easton Lane, Lacock Road, Green Road and Silver Street in addition to unnamed access roads and tracks. The east of Site is bound by Goodes Hill Road (B3353)/Coppershell. Public footpaths are located across the Site. There are many utilities that cross the Site, typically along roads. Electricity, telecoms, and water are found crossing fields. Sewer pipes are present across the Site and associated with a sewage treatment works to the east of the corridor. Electricity pylons and overhead cables are present at the south of Site.
Topography	The topography of the Site is undulatory hills with elevations varying between 60 m above Ordnance Datum (AOD) and 110 m AOD. The highest elevations are recorded in the south of Site, southwest of Gastard Village. The land generally falls from approximately 120 m AOD at the west of Site, to 70 m AOD at the northeast and 60 m AOD in the southeast.
Adjacent and Surrounding Land Use (pertinent features)	North: Agricultural land surrounds the north of Site and a caravan park. Chippenham town centre lies approximately 3.5 km northeast.
	East: The land use to the east is predominantly agricultural fields and farms. Gastard village and Chapel Knapp village lie adjacent to the central area of Site. A sewage treatment works is present to the east of Site, approximately 470 m south of the railway. Thingley Junction and the Wey Weymouth Line (ELR: WEY) are 600 m east of the Site at their closest point.
	South: The south of Site is bound by Whitley village and some agricultural fields.
	West: Predominantly agricultural fields and associated farmland infrastructure. An underground wine storage facility and mine rescue training centre, with assumed underground facilities, are present to the southwest. Corsham town centre is approximately 1.7 km west.

Historical Setting

1.2.2 Historical Ordnance Survey (OS) maps of the Site and the wider environs were provided in the Groundsure Report (scales 1:2500, 1:10,000 and 1:10,560) and viewed from Google Earth Pro and these are reviewed in this section. Copies of these maps are presented as Annex 19-8-1.

1.2.3 The historical Ordnance Survey (OS) maps obtained with the Groundsure report date between 1885 and 2024.

1.2.4 **Table 3** below presents a summary of the main features present on and within approximately 250 m radius of the Site boundary. Geosyntec notes that only indicative map scales are provided. Where dates are stated, these refer to the dates of maps on which the features are present, have changed use, are no longer annotated, and do not necessarily refer to the exact dates of existence of a particular feature. Development that may have occurred between map editions is recorded as occurring on the latter published map, hence there are some limitations to the accuracy to the date of development unless supplementary evidence is available:

Table 3: Summary of Historical Uses

Historical Use of Site and Surroundings		
On-Site	1885	Agricultural land comprising several fields, hedges, multiple small ponds, ditches/streams, and roads. Monks Northey's Farm is located at the south of Site. Two trial shafts are identified at the south of Site at approximately 388464, 167744 (a feature is visible on satellite imagery) and 388144, 168110, a pump lies approximately 100 m of this shaft at a pond. Monks Park lies adjacent to and in the centre of Site. The railway cuts across the north of the Site.
	1885-1886	Roman road in the south of Site. Pump station at the central western area of Site.
	1899	The trial shaft (388464, 167744) has been renamed as an air shaft. Footpaths present at Monks Park in addition to Monks Farm and a saw pit.
	1919-1923	No significant change in configuration or layout.
	1923-1926	Sewage works with filter beds located at the northwest of Site boundary, adjacent to Byde Mill Brook stream. A quarry is recorded in the central eastern area of Site.
	1960	Sewage works now annotated as 'works,' an additional sewage facility has been constructed downstream, adjacent to the east of Site.
	1976	Overhead electricity cables constructed across the south of Site.

Historical Use of Site and Surroundings		
	1991	No significant change in configuration or layout.
	2001	No significant change in configuration or layout.
	2010	No significant change in configuration or layout.
	2024	No significant change in configuration or layout.
Off-Site (within 250m)	1885	Land use surrounding the Site is agricultural, farms, springs, and multiple wells. Monks Park is located west of the Site and Westrop Plantation is located northwest. Squatters Lane runs parallel to the west of Site. A quarry lies east of the Site at Velley with multiple wells surrounding. Multiple air shafts and trial shafts are located from approximately 50 m west of the south of Site. Additional shafts at Monks Park and Eastlays are located approximately 250 m west. Monk's Quarry and tramway lies approximately 250 m west of Site.
	1885-1886	Additional wells and field boundaries.
	1899	Quarry and footpaths in the southwest of Site.
	1922-1923	Tank located in southwest of Site. A water well in the west of Site has been re-labelled as an old air shaft. Annotated wells adjacent to the east at Chapel Knapp are no longer annotated but three air shafts are now present. Quarry feature adjacent to the east of Site, north of the Roman road.
	1923-1925	Two air shafts located adjacent to the eastern Site boundary, south of Chapel Knapp.
	1955-1960	Developments in Whitley village. Changes in layout and configuration at Monks Quarry.
	1970-1976	Significant developments surrounding the Site to Whitley Village and Monk's Park. The park has reduced in size and is now Monk's Park Mine with various buildings. Monk's Quarry has been expanded and converted to a tip. Changes to configuration in the sewage works at the north of Site. Quarry at the east of Site has a shaft label.
	1990-1995	Minor changes to buildings surrounding the Site. Tip at former Monk's Quarry recorded as disused and renamed Eastlays Quarry.
	2001	No significant change in configuration or layout.
	2010	No significant change in configuration or layout.

Historical Use of Site and Surroundings		
	2024	No significant change in configuration or layout.

1.2.5 The maps show that Lime Southwest Corridor has been farmland since the earliest available in 1885, with the Site predominantly made up of agricultural fields. Monks Park is understood to have been on Site since 1885 and remained broadly unchanged until 1976. The ELR: MLN1 was constructed in 1833 and therefore predates the historical mapping of the Site.

1.2.6 Two sewage works have been mapped in the north of Site at the east and west boundary on Byde Mill Brook. The sewage works in the northwest of Site is assumed to be disused based on available satellite imagery.

1.2.7 Historical underground and surface mining has taken place in the centre and southern areas of Site. Mining hazards are identified from 1885 however it is anticipated that mining commenced earlier. Shafts and air shafts are recorded around the south of Site.

1.2.8 Monk's Quarry lies adjacent to the southwest of Site from 1885 and was converted into landfill/tips from 1970. This area is now vegetated and used as an underground wine storage facility.

Physical and Environmental Setting

1.2.9 The physical setting including the topography, geology, hydrogeology and hydrology are the key factors that influence the way in which contaminants in the soil or groundwater can be transported on or off Site, and also the way in which contamination can affect applicable receptors including controlled waters and users of the Site.

1.2.10 The physical and environmental setting of the Site, in **Table 4** and **Table 5** below, has been assessed by making reference to the information sources detailed in Table 1.

Table 4: Summary of Physical Characteristics

Physical Setting	
Geology and Geohazards	
Geology	**Anthropogenic Strata - made ground or backfill:** Artificial deposits are not recorded on the BGS Mapping for the Site. However, made ground associated with historical land uses such as, agricultural activities, field entrances, mining, quarries, and tips are anticipated to be present.
	Soil: The soils anticipated on Site are either loamy and clayey soil with impeded drainage, (concentrated in the south of Site) or shallow lime rich loamy soils over limestone with good drainage. BGS 1:10,560 Sheet

Physical Setting	
	ST86NE (1971) describes the surrounding area as undulating with sandy to clayey loam. Further information is contained within **ES Volume 1, Chapter 17: 'Soils and Agriculture' [EN010168/APP/6.1]**.
	Superficial Geology: Superficial Deposits are absent from most of the Site. A localised area of Alluvium is present at the northwest of Site associated with a watercourse.
	Solid Geology: The Site is underlain by Kellaways Formation, Cornbrash Formation and Forest Marble Formation. These units are part of the Great Oolite Formation. Descriptions are listed below and are taken from the BGS Lexicon of Named Rock Units. The Kellaways Formation comprises grey sandstone, siltstone and mudstone and the Kellaways Clay Member (mudstone). The Cornbrash Formation is a medium to fine-grained limestone poorly bedded limestone with calcareous mudstone. The Forest Marble Formation comprises greenish grey mudstone with lenticular typically cross-bedded and shelly limestone units. The majority of Site is underlain by the Mudstone within this unit. The Bath Oolite Member (part of the Chalfield Oolite Formation) is anticipated at depth beneath the Site. The depth to engineering rockhead is unknown, however, it is anticipated that the upper stratum will be completely weathered to a clay, becoming rock strength at relatively shallow depths.
	Geological Structures: There are four geological faults within the Site boundary which are part of the Atworth Lackock Fault Belt. Two of these faults in the south of Site are displaced by a small fault. All faults, excluding the cross-cutting minor fault, are orientated northeast/southwest. The available BGS mapping indicates the major faults have a throw direction to the southeast and the minor fault has a downthrow to the southwest. The maps do not provide a displacement magnitude. The available BGS mapping does not provide a dip and dip direction of the bedrock.
	Borehole Records: There are five BGS boreholes within the Site boundary, three of which are confidential. Depths to bedrock and pertinent information for the available boreholes, concentrated in the north of Site, are listed below. • ST86NE30 – depth to bedrock 5.8 m below ground level (BGL) ('hard blue rock'). • ST86NE23 – depth to bedrock not provided (assumed at surface) but borehole identifies Forest Marble Formation underlain by the Bath

<table>
<tr><th colspan="3">Physical Setting</th></tr>
<tr><td></td><td colspan="2">Oolite Member, the Bath Oolite is approximately 18 m thick. Rest water level during drilling 4.5 m BGL and the ‘top of aquifer’ is recorded at 7 m BGL.</td></tr>
<tr><td rowspan="6">Geohazards</td><td>Hazard Type</td><td>Hazard Potential</td></tr>
<tr><td>Collapsible Ground</td><td>Negligible to very low</td></tr>
<tr><td>Compressible Ground</td><td>Negligible or moderate (Alluvium)</td></tr>
<tr><td>Ground Dissolution</td><td>Negligible to very low. However, note that Groundsure record the Site to lie in an area of Significant soluble rock risk in the south and southwest of the Site.</td></tr>
<tr><td>Landslide</td><td>Very low to moderate (moderate risk associated with rail cuttings, water course and in the centre of Site)</td></tr>
<tr><td>Running Sand</td><td>Negligible to low</td></tr>
<tr><td>Shrinking or Swelling Clay</td><td>Negligible to low</td></tr>
<tr><td>Ground Cavities and Sinkholes</td><td colspan="2">The Groundsure GeoInsight report does not identify any natural cavities beneath the Site.</td></tr>
<tr><td>Coal Mining</td><td colspan="2">The Coal Authority interactive map viewer shows that the Site is not within a Coal Mining Reporting Area, and therefore is not in a Development High Risk Area. No Coal Mining Risk Assessment (CMRA) is considered necessary.</td></tr>
<tr><td>Radon</td><td colspan="2">The Site is typically within an area of less than <1% radon potential. Where Alluvium is present, between 1% and 3% radon potential is identified.</td></tr>
<tr><td>Non-Coal Mining/Minerals</td><td colspan="2"><u>Underground Workings</u>
One mining cavity is recorded to be present on Site at the western Site boundary in the central area associated with Monks Park Mine. It should be noted that historical mapping identified two trial shafts which were identified in the south of Site at approximately 388464, 167744 (a feature is visible on satellite imagery) and 388144, 168110.

Historical underground rock mining is present beneath the central and southern areas of Site. The commodity extracted was ‘Bath Freestone’ which is understood to be worked from 1872 by pillar and stall methods at depths of 29 m below ground level (bgl). Four underground mines lie adjacent to the Site: Monks Park/The Ridge, Eastlays Mine, Goodes Mine and Elm Park.

It is understood Monks Park Mine underlies the majority of Site. It was opened in 1886 before closing in 2005 and was also used for military munitions storage and bunkers. Monks Park mine reopened in 2016 and closed again in 2018. The mine is approximately 125 ha. A mining rescue training centre is located here.

Less information is publicly available for Elm Park underground workings however online forums indicate the mine opened in 1900 and was used</td></tr>
</table>

Physical Setting	
	for RAF lubricating oil and ammunitions storage from 1941 to 1943. No working depths are provided. It is understood Eastlays mine was converted to landfill in the 1970's. Goodes Hill Mine was significantly smaller however was prone to flooding. There are shafts on Site near Monk's Park recorded as a Chapel Knap trial shaft and Eastlays Quarry air shaft, historical maps also refer to these as air shafts. It is possible unrecorded mine entries and air shafts exist at the Site. Mine entries also lie adjacent to the Site boundary. A Mining Risk Assessment (MRA) has been produced and is presented as ES Volume 3, Appendix 19-11: Mining Risk Assessment **[EN010168/APP/6.3]**. **Surface Workings** With respect to surface workings, the Groundsure GeoInsight report identifies 108 workings on and within 250 m of the Site boundary. These workings on Site are associated with ponds, cuttings, quarries, sewage works, a saw pit and other unspecified workings/pits.
Evidence of Land Contamination	See section on Site Walkover.
Hydrogeology	
Aquifer Designation	There are no superficial aquifers on the Site. The Forest Marble Formation - Mudstone is designated as a Secondary A aquifer. The Kellaways Formation in the south of Site is unproductive. The limestones of the Great Oolite Group are a designated Principal Aquifer.
Groundwater Vulnerability	Secondary A bedrock aquifers are stated as being high vulnerability. The groundwater bodies have a good chemical rating.
Source Protection Zone Status	The Site is within a Source Protection Zone 1 (SPZ1)– inner catchment and Zone 2 – outer catchment.
Licensed Groundwater Abstraction	The Groundsure report and information supplied from Wiltshire council have been reviewed for information pertaining to groundwater abstractions. There are five active groundwater abstraction points recorded within 2000m of the Site. Two of which are drinking water abstraction licenses within 100m of the Site, adjacent to the east on Goodes Hill Road. These abstractions are operated by Wessex Water Services Ltd and are assumed to be associated with the SPZ1. Details are presented below. • Goodeshill Borehole No 1, License number 17/53/001/G/201. Potable water supply extracting 2500 m^3 of groundwater daily. • Goodeshill Borehole No 2, License number 17/53/001/G/201. Potable water supply extracting 2500 m^3 of groundwater daily. The remaining three abstraction points are located at Neston Home Farm, 1667 m south of the Site. There is also an identified water supply abstraction at Rodbourne, extracting up to 13 million Litres per day. It is considered a particularly sensitive receptor due to the volume of water abstracted.

Physical Setting	
Local Authority Registered Private Water Supply Abstractions	Wiltshire Council were contacted for information on private water supply abstractions. There are no recorded private water supplies on or within 100m of the Site. Copies of email correspondence can be found in Appendix 19-10.
Groundwater Flooding Potential	There is a negligible to high risk of groundwater flooding recorded at the Site with the risk increasing towards the surface water bodies. The majority of Site is either negligible or moderate risk.
Hydrology	
Surface Water Courses and Drainage	The Groundsure GeoInsight report identifies sixty-one surface water features within 250 m of Site. Of these, six are present within the Site boundary and are associated with unnamed underground and surface watercourses (including Byde Mill Brook) and a lake. The River Avon lies approximately 2.8 km east of Site at its closest point.
Catchment Information	The Site lies within three water body catchments which all feed into the Avon Bristol Rural Catchment area. The water body catchments are listed below. • South Brook – source to confluence of River Avon. • River Avon confluence between River Marden and Semington Brook. • Byde Mill Brook – source to confluence of River Avon.
Licensed Surface Water Abstractions	The Groundsure report and information supplied from Wiltshire council have been reviewed for information pertaining to surface water abstractions. No Licensed Surface Water Abstractions have been identified within 2 km of the Site.
Local Authority Registered Surface Water Abstractions	Wiltshire Council were contacted for information on private water supply abstractions. There are no recorded public water supplies on or within 100 m of the Site. Copies of email correspondence can be found in Appendix 19-10.
Risk of Flooding from Surface Waters	There is a high risk of flooding on Site associated with Byde Mill Brook, a flood event is associated with this stream in 1968. Flood zones 2 and 3 are present on the Site associated with Byde Mill Brook. Refer to **ES Volume 1, Chapter 11: Hydrology, Flood Risk and Drainage [EN01068/APP/6.1]** for additional detail.

Table 5: Summary of Other Environmental Information

Environmental Setting	
Protected Areas	
Sensitive Sites (within 250 m)	**Protected Woodland:** No Ancient Woodlands were identified on or within 250 m of the site **SSSI/SPA/SAC etc:**

Environmental Setting	
	The Site lies within a Site of Special Scientific Interest (SSSI) Impact Risk Zone. Refer to **ES Volume 1, Chapter 9: Ecology and Biodiversity [EN01068/APP/6.1]** and **ES Volume 1, Chapter 10: Arboriculture [EN01068/APP/6.1]** for additional detail.
Cultural Heritage	There are fifty-three records of Grade II listed buildings in the vicinity of the Site. A Conservation Area is located in the northwest of Site associated with Easton and has multiple Grade II listed buildings associated. Refer to **ES Volume 1, Chapter 12 Cultural Heritage [EN01068/APP/6.1]** for additional detail.
Other	
Asbestos	No asbestos surveys are available for the Site. Note that it is common for buried asbestos to be found on farmland or in spoil bunds.
Invasive Plants	Detailed information is contained within **ES Volume 1, Chapter 9: Ecology and Biodiversity [EN01068/APP/6.1]**.
Unexploded Ordnance	Zetica UXO maps show a low risk of unexploded ordnance. However, it should be noted the underground mines at Site were used as munitions and explosives storage by the military. It is assumed all historical military equipment has been removed.
Nitrate Vulnerability	Nitrate vulnerable zones are present on-Site associated surface water and groundwater.

Regulated Activities

1.2.11 The key relevant features that characterise the Site and surrounding area are summarised in this section, along with an indication of the risk to the land quality of the Site.

1.2.12 Information on groundwater and surface water abstractions is detailed in Table 4.

1.2.13 Generally, any regulated activities, i.e. those covered by national legislation to control industrial emissions such as the Environmental Permitting Regulations 2016, within 250 m of the Site could, depending upon their nature, represent potential off Site sources of contamination. Typically, at distances greater than 250 m risks are not likely to be unacceptable with respect to the site development.

Regulated Processes

1.2.14 **Table 6** summarises information on regulated processes contained in the Groundsure report present at the Site (Annex 19-8-2). The report collates data from a variety of sources including the Environment Agency (EA) and the British Geological Survey (BGS). Processes, incidents, and inventories not identified on or within 250 m of the Site boundary have been excluded from the table. A full list of screening criteria can be found within Annex 19-8-2.

Table 6: Summary of Regulated Information

Subject	Number present		Details
	On Site	0-250m	
Agency and Hydrological			
Active Discharge Consents	-	9	For sewage and agricultural discharges.
Pollution Incidents	-	6	Incidents relate to household waste and sewage materials. The majority of the impacts of the recorded incidents are negligible apart from two sewage releases which had a significant impact to water.
List 2 Dangerous Substances	-	1	Active license for the discharge of chromium, copper, lead, nickel and zinc 111 m north of the Site.

1.2.15 There are no additional contaminated land register entries, pollution incidents, pollution prevention controls, prosecutions relating to controlled waters or authorised processes, registered radioactive substances or hazardous substances, identified on or within 250 m of the site.

Licensed Waste Management Facilities

1.2.16 An attempt has been made to identify any landfilling operations, past and present that have taken place in the vicinity of the Site. The Groundsure GeoInsight report identifies an active waste Site at Thingley Junction Landfill Site 423 m northeast of Site. A historic landfill is located 329 m northeast of Site boundary, in addition to the tip identified at Eastlays, approximately 250 m west of the Site (see Table 3).

1.2.17 There are 306 waste exemption records within 500 m, only one is recorded within the Site boundary relating to storage of sludge on a farm in the southwest of Site. The waste exemption in the wider area relate to agricultural processes

such as spreading of waste, incorporating ash into soil, burning of waste, waste treatment and treatment of waste by chopping.

Industrial Land Use

1.2.18 According to the Groundsure Report, there are 38 recent contemporary trade directory entries within 250 m of the Site. On Site these relate to pylons and an air shaft. Active land use surrounding the Site includes a garage, electricity substation, sewage works, dairy farm, pump, tanks, quarries, and underground mining.

1.2.19 Historical land use on Site included unspecified quarries and pits, trial shafts, saw pit, sewage works, cuttings, garage and a bakery. The map provided within the Groundsure GeoInsight report does not locate the historical garage on Site. Historical land use within 250 m of the Site boundary includes sewage works, mine workings, unspecified tanks, refuse tips, pumping house, railway sidings, burial ground and unspecified depot.

Site Walkover

General Description

1.2.20 Site walkovers of the northwestern cable route area were completed on 28th May and 28th July 2025. A photolog documenting this visit has been created and is appended to this appendix as Annex 19-8-3. The walkover was undertaken in line with the proposed order limits and general arrangement of the scheme at that time.

1.2.21 It was not possible to access every field along the route due to landowner permissions, but where access was not possible fields were observed from gateways on public roads.

1.2.22 The area comprises agricultural fields, which during the site walkover were observed to contain grain crops, meadows and livestock fields. Some fields had been recently harvested during the July visit.

1.2.23 Topography varies across the area and was generally undulating.

Notable Features

1.2.24 The Pudding brook crosses the cable route approximately 75 m south of the A4 Bath Road. The brook was observed to be nearly dry during the July site walkover with low flow.

1.2.25 A number of pylons and overhead cables are present along the route, increasing in frequency in the southern part of the route, generally trending towards the Melksham substation.

1.2.26 A field between Bath Road and Easton Lane had a large wooded pond, which was dry at the time of the site walkover. Overhead cables and pylons were present in the same field.

1.2.27 South of Easton, there is a crossroads where five roads (Lacock Roads, Easton Lane, Coppershell, Corsham Road and Gastard Lane) intersect with the railway line. The railway is built into a cutting below the road level, and the intersecting roads share a single bridge across the railway. The northern railway embankment appeared to have been recently worked on.

1.2.28 Chapel Knapp is a single track road to the southwest of Gastard, which accesses a farm and residential properties. Overhead powerlines supplying the properties running parallel with the road. The fields surrounding the farm contained grain crops and potato crops during the site walkover.

1.2.29 In the larger field between Chapel Knapp and Green Road, a pile of what appeared to be concrete was observed in the centre of the field. It was not possible to access the field to observe the pile closer. The area is adjacent to the former stone mine to the west, and it was unclear if this was potentially related to the mine.

1.2.30 In the south of the route, on the outskirts of Melksham near the junction of Goodes Hill and Westlands Lane is the only residential garden on the route which the cable will pass through. The garden contained an orchard grassed lawn.

1.3 Conceptual Site Model and Preliminary Risk Assessment

Introduction

1.3.1 This section is aimed at identifying possible risks, if any, arising from substances used or deposited on-Site, or from other sources of land contamination. Both past and current potentially contaminative land uses have been considered. It is based on the Site redevelopment detailed in **ES Volume 1, Chapter 2: The Order Limits [EN010168/APP/6.1]** and **Chapter 3: The Scheme [EN010168/APP/6.1]**.

Assessment Framework

1.3.2 The risk assessment framework that will be used for this assessment is described in **Appendix 19-16: Preliminary Risk Assessment Approach and Methodology [EN010168/APP/6.3].**

Conceptual Site Model

1.3.3 The potential sources of contamination, potential pathways and receptors which relate to the proposed cable route are described below.

Potential Contamination Sources

On Site:

S1. Potential made ground associated with the farmland, backfilled quarries, and mining waste.

S2. Possible small-scale spills/leaks of fuels and oils associated with the agricultural use, garages and roads.

S3. Historical elevated pesticides and herbicides associated with the agricultural use of the Site.

Off-Site:

S4. Contaminants of potential concern (CoPC) associated with the sewage works such as elevated pathogens, metals, inorganics, organics, polychlorinated biphenyl's (PCB'S), micro-organisms and treatment chemicals (including sulphates, polyelectrolytes, pH adjusters, chloride and lime).

S5. Refuse tips west of the Site.

Cable as a Source:

S6. Thermal impact from cables installed

Potential Pathways

P1. Dermal contact, ingestion or inhalation of soil or dust.

P2. Inhalation of gases or vapours.

P3. Leaching and migration of contaminants in groundwater. There is a mining risk which may provide preferential pathways to aquifers.

P4. Direct contact.

P5. Gas migration.

P6 Thermal advection diffusion dispersion

Potential Receptors

R1. Residential and commercial neighbours on and adjacent to Site.

R2. Surface waters including ponds and streams on Site.

R3. Principal, Secondary A aquifers and SPZ 1.

R4. Licensed groundwater adjacent to the east of Site.

R5. Infrastructure including utilities and proposed cable.

R6. Public access.

R7. Construction workers.

Preliminary Risk Assessment

1.3.4 An initial Conceptual Site Model (iCSM) illustrating plausible contaminant linkages has been formulated for the proposed cable route across the Site. The qualitative preliminary risk assessment of the possible linkages of the above sources (S1 to S5), transport pathways (P1 to P5) and receptors (R1 to R7) are provided in Table 7.

1.3.5 The level of risk is determined based on the current condition of the Site (i.e. the effects of mitigation measures are not included).

1.3.6 The underground storage of military munitions and UXO is not considered a source due to the anticipated depth in relation to the proposed works.

1.3.7 PWS abstractions are not considered a receptor for the proposed works due to none lying within influence of the proposed works.

1.3.8 The preliminary risk assessment undertaken with in this section applies to the construction, operation, and decommissioning phases. The assessment focuses on chronic risks to future end users and off-site receptors. While acute risks to human health exposure for construction, maintenance, and decommissioning workers are considered, it is assumed that these linkages will be managed by appropriate health and safety measures as identified in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12], Outline Operation Environmental Management Plan (OEMP) [EN010168/APP/7.13],** and **Outline Decommissioning Strategy [EN010168/APP/7.14].**

Table 7: Potential Sources, Pathways and Receptors

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S1: Potential for localised made ground (MG) farmland, quarries and mining	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R1:** Residential and commercial neighbours	Mild	Unlikely	Very Low	S1-P1-R1	Risk assessments will dictate if dust suppressive measures are needed to prevent contact with potential contaminants. Appropriate security measures to be put in place during construction works to prevent access to the public.
		R6: Public access	Mild	Unlikely	Very Low	S1-P1-R6	
	P2: Inhalation of gases or vapours	**R1:** Residential and commercial neighbours	Medium	Unlikely	Low	S1-P2-R1	Made ground is anticipated to be of limited extent and generation potential. However, if a ground gas source is identified, this may pose a risk to off-site neighbours. The project will avoid routing the cable through areas of recorded quarrying and ponds to prevent creating a pathway to residential and commercial neighbours.
		R6: Public access	Medium	Unlikely	Very Low	S1-P2-R6	
	P3: Leaching and migration	**R2**: Surface waters	Mild	Low	Very Low	S1-P3-R2	Two watercourses are present across the Site. Areas of made ground can leach contaminated water into these water courses. Mining spoil not anticipated to be likely based on agricultural farm use and other areas of made ground will be acute.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
		R3: Principal, Secondary A Aquifers, SPZ 1 and 2.	Medium	Low	Moderate/Low	S1-P3-R3	Made ground is anticipated to be present in localised areas associated with historical land use, contaminants can be mobilised via shallow groundwater. Given the anticipated geology groundwater is likely to be perched on cohesive layers. Given the sensitivity of the receptor beneath the entire Site, a discovery strategy will be carried out to ensure the proposed cable route does not introduce a potential pathway such as by crossing backfilled ponds and quarries. Moreover a HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R4: Licensed Groundwater Abstraction	Medium	Low	Moderate/Low	S1-P3-R4	Made ground is anticipated to be present in localised areas associated with historical land use. It is possible that CoPC could leach into groundwater however concentrations are anticipated to be low. Risk assessment will be implemented to ensure works does not create a pathway to

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							the abstraction points adjacent to Site.
	P4: Direct Contact	**R5:** Infrastructure	Mild	Unlikely	Low	S1-P4-R5	Sources of Made ground at localised areas are anticipated however the risk to the cable route and buried infrastructure is low due to non-hazardous land use. The cable route will avoid areas of suspected contamination such as backfilled quarries.
	P5: Gas migration	**R5:** Infrastructure	Severe	Unlikely	Moderate/Low	S1-P4-R5	Large quantities of ground gas can pose human health and explosion risks however this risk is considered unlikely at the Site. Ground gas concentrations are anticipated to be low due to the historical land use being primarily agricultural. Concentrations of carbon dioxide may have accumulated in the closed underground limestone mines.
S2: Possible small-scale spills/leaks of fuels associated with the agricultural use of the Site, historical garage and roads.	**P1**: Dermal contact ingestion or inhalation	**R1**: Residential and commercial neighbours	Mild	Unlikely	Very Low	S2-P1-R1	Leaks or spills of fuel could adversely affect human health. Significant sources of hydrocarbons to cause pollution are considered unlikely and are not anticipated to be present on Site. Appropriate security
		R6: Public access	Medium	Unlikely	Very Low	S2-P1-R6	

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							measures to be put in place during construction works to prevent access and risk to the public.
	P3: Leaching and Migration	**R2**: Surface waters	Mild	Low	Low	S2-P3-R2	Significant sources of hydrocarbons to cause pollution are considered unlikely and are not anticipated to be present on Site. Therefore, the risk of contamination to watercourses at the Site is considered low. However, it is unknown what the historical on-Site tanks contained and their current state, it is plausible these tanks may have leached CoPC.
		R3: Principal, Secondary A aquifer and SPZ 1 and 2	Medium	Low	Moderate/Low	S2-P3-R3	Significant sources of hydrocarbons to cause pollution are considered unlikely and are not anticipated to be present on Site. No significant impacts to groundwater, including the Great Oolite aquifer and the Rodbourne abstraction point, are anticipated. A discovery strategy will be developed for the works to mitigate these risks. Project works will ensure appropriate

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							risk assessments are implemented if/when CoPC's are utilised during construction. Moreover a HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R4: Licensed Groundwater Abstractions	Medium	Unlikely	Low	S2-P3-R4	Significant sources of hydrocarbons to cause pollution are considered unlikely and are not anticipated to be present on Site. Spills will be localised and based on the geology including impermeable mudstone, migration to the principal aquifer is considered unlikely.
	P4: Direct Contact	**R5:** Infrastructure	Mild	Unlikely	Very Low	S2-P4-R5	Significant sources of hydrocarbons to cause pollution are considered unlikely and are not anticipated to be present on Site. Any small spills and leaks will be localised and be of low severity to the proposed cable and current infrastructure.
	P5: Gas Migration	**R5:** Infrastructure	Medium	Unlikely	Low	S2-P5-R5	If present, hydrocarbon spills are considered to be local and isolated and have low vapour generation potential.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S3: Possible elevated pesticides and herbicides from on and off-Site sources	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R1**: Residential and commercial neighbours	Mild	Unlikely	Very Low	S3-P1-R1	Elevated pesticides and herbicides could cause adverse effects to health. However, the likelihood of contact and limited exposure time suggests a very low potential risk to the public.
		R6: Public access	Medium	Unlikely	Very Low	S3-P1-R6	
	P3: Leaching and Migration	**R2**: Surface waters	Medium	Low	Low	S3-P3-R2	Small surface watercourses are present across the Site. Prolonged surface water run-off and excess herbicides or pesticides could flow into surface waters and cause increased contamination.
		R3: Principal, Secondary A aquifer and SPZ 1 and 2	Medium	Unlikely	Low	S3-P3-R3	Prolonged and excess herbicides and pesticides can be encountered in agricultural areas which can infiltrate into aquifers and water abstraction wells. Mudstone beneath the Site will act as impermeable barrier to groundwater migration. Moreover a HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R4: Licensed Groundwater Abstraction	Medium	Unlikely	Low	S3-P3-R4	Herbicides and pesticides at the Site will contribute to the concentrations within abstracted groundwater.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S4: Contaminants of potential concern associated with sewage works	**P1**: Dermal contact, ingestion or inhalation of soil or dust	**R1**: Residential and commercial neighbours	Mild	Unlikely	Very Low	S5-P1-R1	Elevated heavy metals, inorganic ions, oils, organics, PCBs, and treatment chemicals could cause adverse effects to human health. Cable will be designed to avoid sewage works and therefore avoid creating a contaminant pathway.
	P3: Leaching and Migration	**R2**: Surface waters	Mild	Low	Low	S4-P3-R2	Effluent is discharged to the Byde Mill Brook therefore elevated contaminants associated with the effluent are anticipated. Pollution events to the Brook have been recorded associated with this sewage works. Likelihood of encountering on Site is low as works are located to the east and water courses also flow east.
		R3: Principal, Secondary A aquifer and SPZ 1 and 2	Medium	Low	Moderate/Low	S4-P3-R3	There are two spills associated with the sewage treatment works and all effluent is discharged to Byde Mill Brook. Flood events and natural migration of surface and groundwater create a linkage pathway. However, due to the eastern flow of surface water, any pollution events are unlikely

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							to impact the Site. Moreover a HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R4: Licensed Groundwater Abstraction	Medium	Unlikely	Low	S4-P3-R4	Sewage works is located 2 km north of the groundwater abstraction points. This distance combined with the anticipated groundwater flow direction (towards known water courses) creates an unlikely probability of the sewage works contaminating the abstraction points.
	P2: Inhalation of Gases or Vapours	**R1**: Residential and commercial neighbours	Medium	Unlikely	Low	S4-P2-R1	Concentrations of sewer gas such as ammonia, methane and hydrogen sulphide cause a human health and explosion risk. The gasses may have accumulated within voids, fissures and dissolution features beneath the Site and in the land surrounding the sewage works. Optioneering will avoid excavations in this identified area.
	P5: Gas Migration	**R5**: Infrastructure	Medium	Unlikely	Low	S4-P5-R5	
	P4: Direct Contact	**R5:** Infrastructure	Mild	Unlikely	Very Low	S4-P4-R5	The proposed cable route will avoid the sewer works and culverts.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
S5: Refuse tips west of Site	**P2:** Inhalation of Gases or Vapours	**R1**: Residential and commercial neighbours	Medium	Unlikely	Low	S5-P2-R1	Ground gases can migrate through cracks and fissures within the bedrock to the Site or de-gas from groundwater which has an anticipated eastern flow towards the River Avon. Excavation into the ground for the proposed cable can create a pathway however there are no residential or commercial properties on Site within 250 m of the tip.
	P3: Leaching and Migration	**R3**: Principal, Secondary A aquifer and SPZ 1 and 2	Medium	Unlikely	Low	S5-P3-R3	It is plausible that leachate from landfill and tips can enter groundwater and therefore be abstracted from the groundwater abstraction wells. Prolonged exposure to leachate can alter the groundwater chemical rating. Moreover a location-specific HDD risk assessment will be undertaken to mitigate against risks imposed by this cable installation method.
		R5: Infrastructure	Mild	Unlikely	Very Low	S5-P3-R5	Depending on the concentration and depth, the leachate within the ground can cause corrosion and weathering of buried infrastructure. This also includes future buried cables.

Source	Pathway	Receptor	Potential Severity	Likelihood of Occurrence	Potential Risk	Linkage Reference	Justification
							However, encountering shallow contamination from this tip at the Site is unlikely.
S6: Thermal impact from cables installed	**P6:** Thermal advection diffusion dispersion	**R2**: Surface waters including ponds.	Mild	Unlikely	Very Low	S8-P6-R2	The cable will be installed at a depth of 2 m BGL. The groundwater strikes identified by HDD range between 0.9 – 1.5 m BGL. Cables will be selected in order to minimise thermal loss considering available guidance from the EA. Therefore, impacts to receptor anticipated to be negligible.
S6: Thermal impact from cables installed	**P6:** Thermal advection diffusion dispersion	**R3**: The underlying Secondary A aquifer and Principal Aquifer and SPZ 2	Mild	Unlikely	Very Low	S6-P6-R3	The cable will be installed at a depth of 2 m BGL. The groundwater strikes identified by HDD range between 0.9 – 1.5 m BGL. Cables will be selected in order to minimise thermal loss considering available guidance from the EA. Therefore, impacts to receptor anticipated to be negligible.

Discussion of Risk to Future Construction Workers and Off-Site Receptors

1.3.9 The Scheme works will be undertaken in compliance with Construction Design and Management (CDM) Regulations 2015.

1.3.10 Prior to work commencing, a health and safety risk assessment will be carried out by the appointed Principal Contractor/developed in accordance with current health and safety regulations. This assessment will cover potential risks to construction staff, maintenance staff and the local population. Based on the findings of this risk assessment, appropriate mitigation measures will be implemented during the construction phase or during operation and maintenance.

1.3.11 Acute risks to construction and maintenance workers will be managed by appropriate health and safety measures as identified in the **Outline Construction Environmental Management Plan (CEMP) [EN010168/APP/7.12], Outline Operation Environmental Management Plan (OEMP) [EN010168/APP/7.13],** and **Outline Decommissioning Strategy [EN010168/APP/7.14].**

1.3.12 Temporary works including excavations and trenching will be managed by the CEMP and **soil resources management plan (SRMP) [EN010168/APP/7.15]** and enforced by the Principal Contractor (PC). Access roads should be designated prior to construction and enforced by the PC. Spoil should be bunded away from sensitive receptors and covered to prevent dust and silt migration.

1.3.13 The HDD and installation may penetrate into the Principal Aquifer if encountered at shallow depths, albeit the HDD should not alter hydraulic properties and flow regime of the Principal Aquifer. Publicly available borehole records encounter the Great Oolite Principal Aquifer between 3m BGL and greater than 50m BGL, no groundwater strikes were recorded. Inert bentonite type slurries can be used to seal the walls of the bore or casing can be used which could prevent against contamination and reduce the impact of permeability on the Aquifer. See the preliminary risk assessment for the HDD for further risks ~~associated [EN010168/EXAM/~~identified: **9.~~X~~13 Cable Route Avoidance Areas - Preliminary Geotechnical Risk Register [REP1-129].**

1.3.14 Storage of military ammunitions has occurred beneath the Site. It is assumed this UXO and associated military equipment has been removed when the military relinquished their operations beneath the Site. A desk-top assessment of UXO risk indicates that the UXO risk for this area is low.

1.3.15 The greatest potential for generation of dust will be during the Site works and therefore dust generation will be kept to a minimum in accordance with general good practice, as outlined in, for example, 'Environmental Good Practice on Site', CIRIA Publication C692 to reduce this risk.

1.3.16 The risk to construction workers during the excavation and construction phases in terms of potential exposure to high concentrations of contaminants is considered to be low given the historic and current land uses identified at the Site.

1.3.17 Should gross contamination be identified during the construction phase, then this may pose a potential acute risk to construction works. It is likely to be able to be effectively managed through good health and safety practices and protocols. Adoption of appropriate dust suppression techniques would also mitigate the degree of potential particulate migration off-site.

1.4 Conclusions and Recommendations

Site Location

1.4.1 Lime Down Southwest Corridor is located in Corsham and is broadly orientated northeast to southwest between Easton and Whitely villages in Wiltshire. The Site is centred on NGR 388534 168684.

Proposals

1.4.2 The proposals at the Site comprise an electricity cable between solar PV arrays in the north and an electricity substation to the south.

Site Description

1.4.3 Lime Southwest Corridor comprises an irregular shaped piece of land totalling approximately 185 ha, over approximately 4.5 km length. The Site is predominantly agricultural comprising fields, hedges, trees, ponds and ditches/streams. Gastard village, residential properties and agricultural buildings lie adjacent to the Site. The MLN1 line crosses the north of Site (orientated east/west), additional roadways and footpaths are present at the Site. The topography of the Site is undulatory hills with elevations varying between 60 m AOD and 110 m AOD. The land generally falls gently from approximately 120 m AOD at the west of Site, down to 70 m AOD at the northeast and 60 m in the southeast.

Ecologically Sensitive Sites

1.4.4 The Site lies within a SSSI impact risk zone and a conservation area lies within the north of Site along with multiple Grade II listed buildings.

Site History

1.4.5 The oldest available historical map for the Site is from 1885 and identifies the railway in the north, mine shafts and indicates the Site is primarily farming. Monks Park lies at the centre and adjacent to the west of Site. The park at the Site remains broadly unchanged between 1885 to 1970 albeit additional surface features associated with the underground mining are annotated. Monks Quarry lies approximately 250 m west of Site and was converted to landfill in 1970, this area is now vegetated and a wine storage facility. Two sewage works lie at the east and west boundary extents along Byde Mill Brook, the northeastern works is still active. The underground workings on Site were used as military munitions storage during the 1940's, explosives and lubricants were stored underground.

Geology

1.4.6 The ground conditions on Site are anticipated to be undulating with sandy clayey loam. There are no artificial deposits recorded on the Site however made ground associated with farming activities, backfilled ponds and mine shafts. The majority of Site is absent of natural superficial deposits apart from localised areas of Alluvium. The Site lies on the Lacock Fault belt and the bedrock beneath the Site is the Great Oolite Formation comprising the Kellaways Formation, Cornbrash Formation and Forest Marble Formation with the Bath Oolite Member at depth. Bedrock is shallow, either at surface or from approximately 5.8 m BGL however the depth is anticipated to be variable.

Geohazards

1.4.7 A moderate risk has been identified for compressible ground (at locations of Alluvium) and a moderate risk for landslides at the rail cuttings and a small area at the central northern area of Site. Legacy underground limestone mining beneath the centre and southern areas of the Site is present and is associated with four separate mines. There is a potential risk of surface instability associated with the collapse of mine workings and void migration to the surface. Depending on the groundwater levels and groundwater rebound, underground erosion of the roof rock can propagate void migration and surface subsidence. This has been reviewed, and a further detailed mining risk assessment completed. Two shafts are recorded within the Site boundary and an associated pump which may also be a shaft. It is possible unrecorded workings and mine entries are present beneath and within influencing distance of the Site and therefore will impact the cable route. Surface workings are present on Site in the form of quarries, ponds and unspecified pits which can cause engineering constraints such as differential settlement.

Hydrogeology

1.4.8 Shallow groundwater may be encountered, perched on the low permeability cohesive soils anticipated beneath portions of the Site. Available BGS boreholes have recorded rested groundwater levels at 4.5 m BGL and 7 m BGL. There are no superficial aquifers on Site. The Forest Marble Formation - Mudstone is a Secondary A aquifer, and the Forest Marble Formation - Limestone a designated Principal Aquifer (in addition to other limestones of the Great Oolite Group), the aquifers are recorded to have high vulnerability. The Site lies within a SPZ 1 and 2, two potable groundwater abstraction wells are located adjacent to the east of Site, both extracting 2500 m^3 of groundwater daily by Wessex Water Services Ltd.

Hydrology

1.4.9 There are 61 surface water features within 250 m of the Site, on Site these relate to Byde Mill Brook and some unnamed water channels. The Site lies within the Avon Bristol Rural Catchment area with all the surface water courses feeding into River Avon, approximately 2.8 km east of Site. There are no licensed surface water abstractions within 2km of the Site boundary. There is a high risk of flooding associated with Byde Mill Brook in the north of Site.

Contaminated Land

1.4.10 There are 38 recent contemporary trade directory entries within 250 m of the Site, on Site these relate to a single mine entry and pylons. Active land use surrounding the Site includes a garage, electricity substation, sewage works, dairy farm, pump, tanks, quarries, and underground mining. Historical land use on and off Site included sewage works, saw pit, garages and quarries. There is an active landfill 423 m north of the Site boundary and a legacy landfill 250 m to the west at a former quarry and underground mine. There is one waste exemption for the Site which relates to the storage of sludge. There are 9 active discharge consents within 250m of the Site boundary for sewage waste and agricultural discharge, the sewage works has recorded 2 pollution incidents with significant impact to water.

Preliminary Risk Assessment Conclusions

1.4.11 An iCSM was developed to identify any credible source-pathway-receptor linkages relating to the proposed cable route. There is considered to be typically a low risk from contaminated land to human health receptors. There is a potential for a moderate risk to the Principal and Secondary A aquifers and SPZ1 if Made ground or pollution incidents are encountered,

and the cable route presents a potential pathway. Additionally, a low to moderate risk of explosive gases from backfilled quarries and mining features to current and proposed infrastructure is present. The assessment has also considered the potential for impacts on sensitive hydrogeological receptors, including the Great Oolite aquifer and the Rodbourne abstraction point. Prior to the commencement of the Construction phase, a ground investigation will be undertaken to obtain geoenvironmental data across the extent of the study area. This is secured via the outline CEMP **[REP2-019]** Based on this review, no significant impacts are anticipated. A preliminary risk register has been produced for the HDD and associated construction activities **~~[EN010168/EXAM/~~9.~~X]~~ 13 Cable Route Avoidance Areas - Preliminary Geotechnical Risk Register [REP1-129].**

Preliminary Geotechnical Considerations

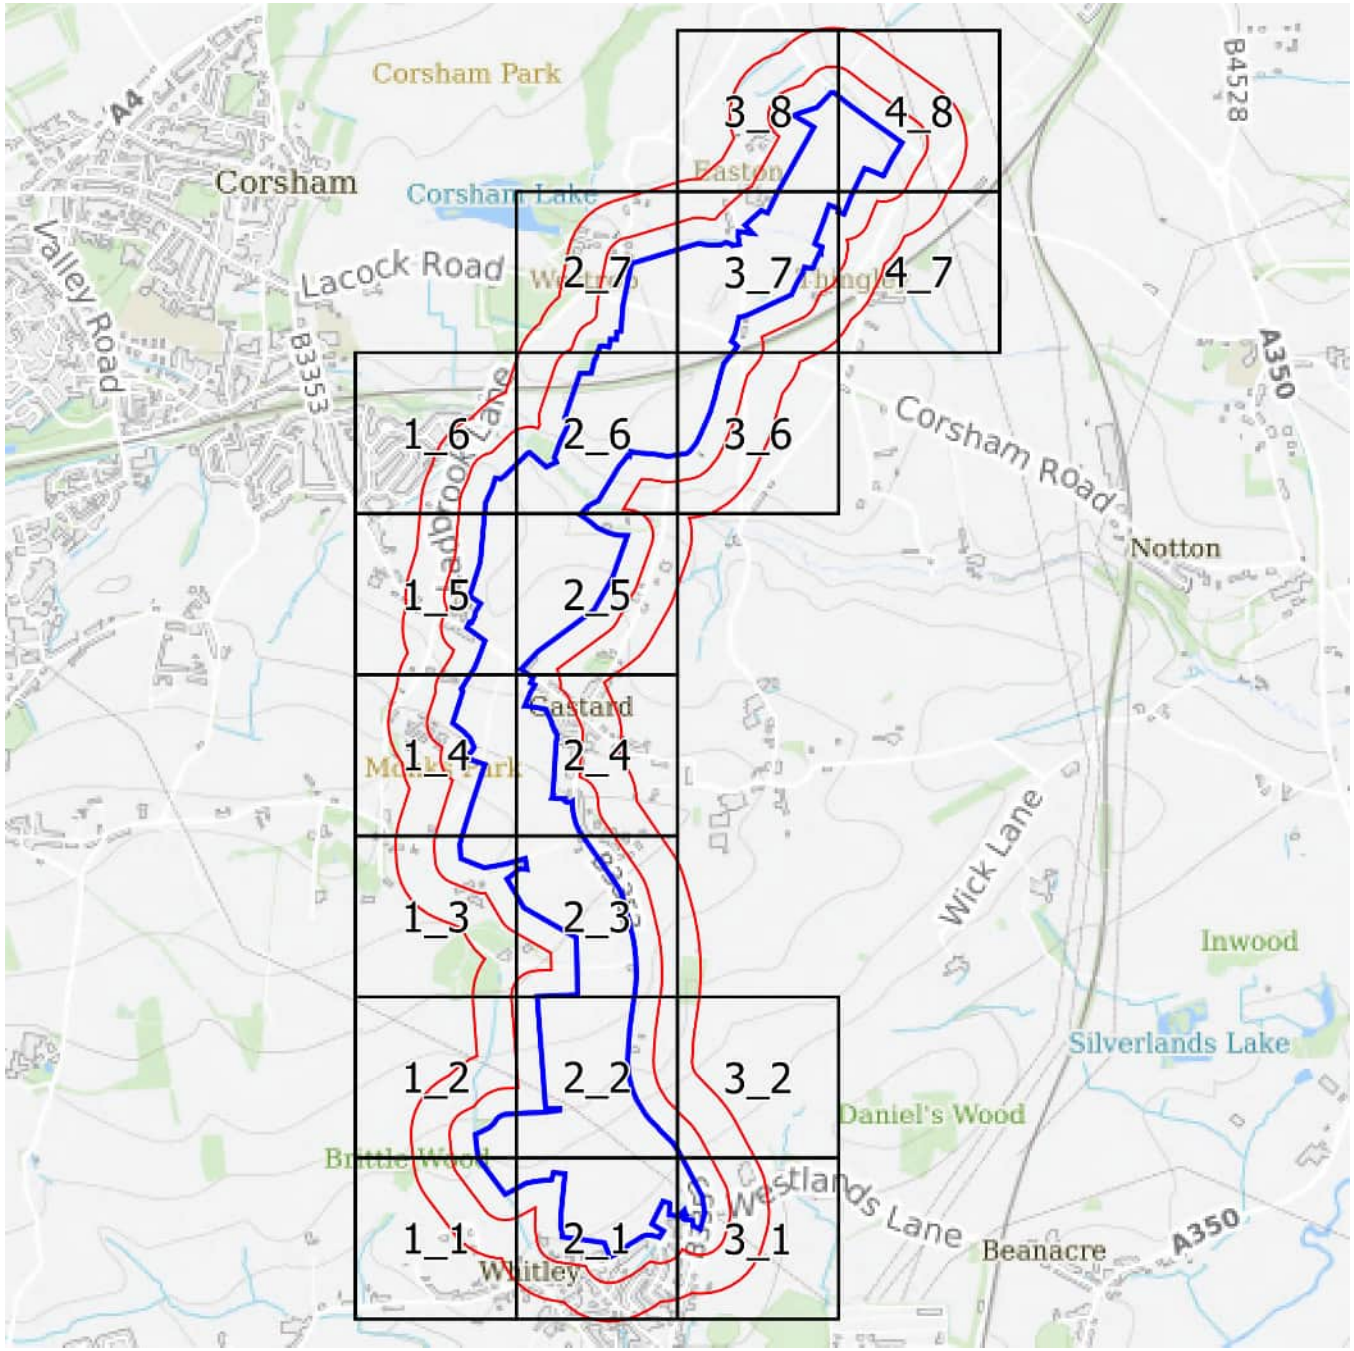

1.4.12 Although there is spatial flexibility within the Cable Route Corridor , there are a number of key crossings and features at the Site such as the MLN1 railway in the north of Site, pylons and overhead cables, roadways, and public footpaths that will need geotechnical consideration to inform the construction risks and appropriate methodology. The ground conditions including the strength of shallow soils and the depth to engineering rockhead and groundwater is unknown for the Site. The impact of compressible ground and shrink-swell clays are not considered to be significant for the proposed cable route, however, a shallow ground investigation is proposed to inform construction constraints and methods. It should be noted that groundwater pumping may have occurred during the use of the underground mine/storage, therefore groundwater levels may not have returned to equilibrium. Before the construction phase, a ground investigation will be required to understand the geohazards associated with the mine ~~workings~~. Ground model data will be obtained at this stage and inform the investigation to determine the precise risk level. Risk assessments will be developed for HDD avoidance areas where applicable. Preliminary risk assessments have been undertaken for HDD areas which can be found in **[~~EN010168/EXAM/9.X]~~ REP1-129].**. Where geohazards are identified which may require mitigation, full consideration will be given as to the permits and permissions required for undertaking those works. Activities such as dewatering mine workings will be undertaken in full consultation with the relevant authorities.

Recommendations

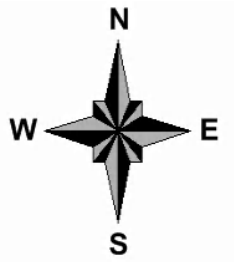

1.4.13 Potential sources of contamination and sensitive receptors should be avoided where practicable. Given that the Southwest corridor has been chosen for the cable route a mining risk assessment (MRA) has also been

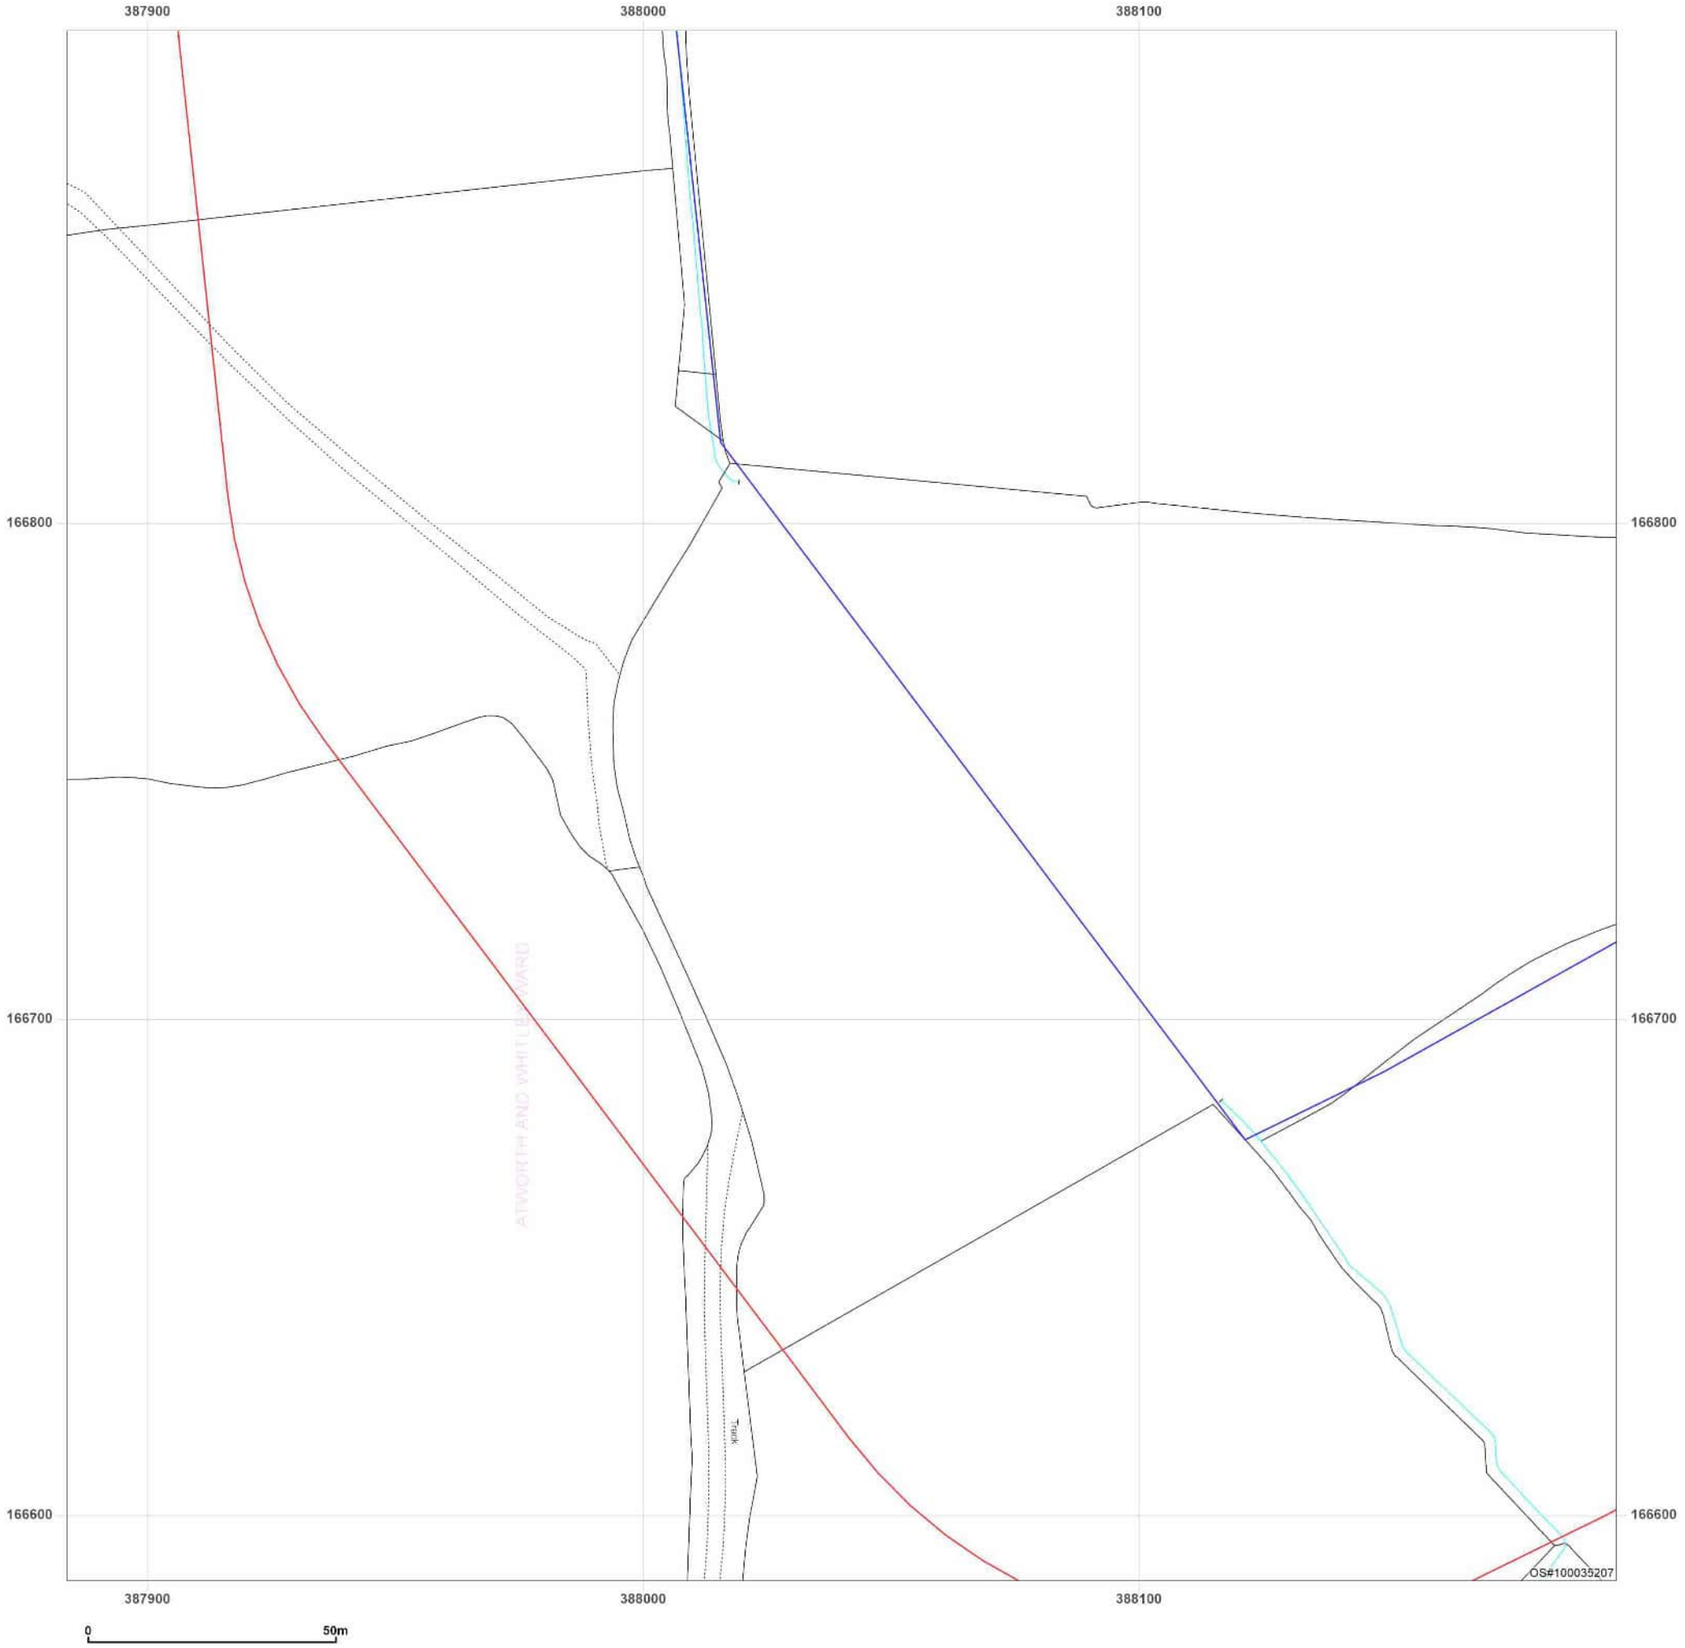

completed. The purpose of the report is to identify and evaluate all the mining risks at the Site and propose solutions, typically this is in the form of geophysics, ground investigation and treatment. Locations of potential contaminants, mining and geohazards should be mapped to undertake optioneering of the cable route. Once the route is narrowed down a geotechnical and geo-environmental ground investigation should be carried out prior to the construction phase. A ground investigation is recommended to inform on the geotechnical properties and the depth to engineering rockhead for the construction methodology (particularly at key crossings) to support the detailed design and to delineate residual risk from mining. Any areas of potential made ground along the route should be targeted for sampling and laboratory testing of common contaminants. To mitigate any residual risk to controlled waters a discovery strategy is recommended to be developed for the proposed cable route.

1.1 Historical industrial land uses

Records within 500m	237

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14 >**

1.2 Historical tanks

Records within 500m	**28**

Tank features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14 >**

1.3 Historical energy features

Records within 500m	**13**

Energy features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or

succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14 >**

This data is sourced from Ordnance Survey / Groundsure.

1.4 Historical petrol stations

Records within 500m	**0**

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.5 Historical garages

Records within 500m	2

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 14 >**

ID	Location	Land use	Dates present	Group ID
F	**On site**	**Garage**	**1970**	**35871**
F	10m W	Garage	1990	39847

This data is sourced from Ordnance Survey / Groundsure.

1.6 Historical military land

Records within 500m	2

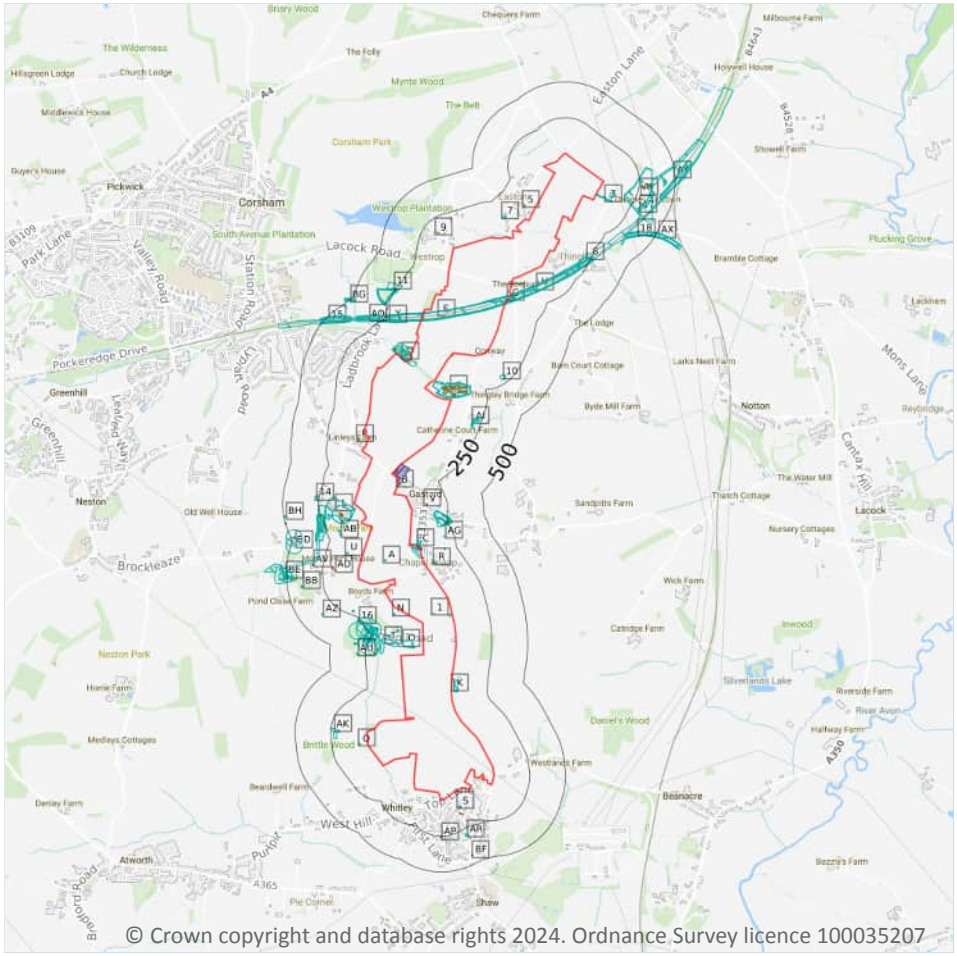

Areas of military land digitised from multiple sources including the National Archives, local records, MOD records and verified other sources, intelligently grouped into contiguous features.

Features are displayed on the Past land use map on **page 14 >**

ID	Location	Site Name	Date of Operation	Activities
5	**On site**	**Mork's Park Quarry**	**c.1886 - 1937**	**c.1886: Used as quarry mines; c.1937: Used as ammunition and explosives stores**
20	287m SW	Ridge quarry	c.WW1 - 1964	c.WW1: Underground storage of trinitrotoluene (TNT), cordite; c.1922: Vacated; c.1934: Requistioned by the War Office; c.1936-1955: RAF; c.1975: The Ridge was repurchased by the Neston Estate

This data is sourced from Ordnance Survey / Groundsure / other sources.

2.1 Historical industrial land uses

Records within 500m	269

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 10,560 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use - un-grouped map on **page 27 >**

3 Waste and landfill

3.1 Active or recent landfill

Records within 500m	0

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m	0

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m	0

Landfill sites identified from Local Authority records and high detail historical mapping.

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m	2

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

Features are displayed on the Waste and landfill map on **page 41 >**

ID	Location	Details		
10	329m NE	Site Address: Disused Railway Cutting, Thingley Licence Holder Address: Northway, Gloucester Road North, Filton, Bristol, Avon	Waste Licence: Yes Site Reference: NW/90/0073/WD Waste Type: Inert Environmental Permitting Regulations (Waste) Reference: - Licence Issue: 02/04/1991 Licence Surrender: -	Operator: - Licence Holder: Churngold Excavations Limited First Recorded - Last Recorded: -

This data is sourced from the Environment Agency and Natural Resources Wales.

3.5 Historical waste sites

Records within 500m	1

Waste site records derived from Local Authority planning records and high detail historical mapping.

Features are displayed on the Waste and landfill map on **page 41 >**

ID	Location	Address	Further Details	Date
Q	405m NE	Site Address: Land at Thingley Junction, Easton Lane, Chippenham, Wiltshire, SN14 0RW	Type of Site: Recycling Facility Planning application reference: 13/01956/WCM Description: Scheme comprises use of land (former railway yard) for metal salvaging and recycling, including E.O.L.V. (End of Life Vehicle) processing; waste transfer station; including improvements to vehicular access, construction of buildings and associated sitewo rks and landscaping. (Resubmission of N/12/03988/WCM). Data source: Historic Planning Application Data Type: Point	06/05/2015

This data is sourced from Ordnance Survey/Groundsure and Local Authority records.

3.6 Licensed waste sites

Records within 500m	**2**

Active or recently closed waste sites under Environment Agency/Natural Resources Wales regulation.

Features are displayed on the Waste and landfill map on **page 41 >**

ID	Location	Details		
N	423m NE	Site Name: Thingley Junction Landfill Site Site Address: Thingley Junction, Thingley Junction, Thingley, Chippenham, Wiltshir Correspondence Address: -	Type of Site: Landfill taking other wastes Size: 25000 tonnes Environmental Permitting Regulations (Waste) Licence Number: CHU062 EPR reference: EA/EPR/DP3390FM/S002 Operator: Churngold Excavations Ltd Waste Management licence No: 27159 Annual Tonnage: 100000	Issue Date: 20/02/1989 Effective Date: - Modified: - Surrendered Date: Jul 6 2000 12:00AM Expiry Date: - Cancelled Date: - Status: Expired
N	454m NE	Site Name: Thingley Junction Landfill Site Site Address: Thingley Junction, Thingley, Chippenham, Wiltshire, SN15 2NG Correspondence Address: -	Type of Site: Landfill taking other wastes Size: >= 75000 tonnes Environmental Permitting Regulations (Waste) Licence Number: 652638 EPR reference: EA/EPR/DP3390FM Operator: Churngold Excavations Limited Waste Management licence No: 27159 Annual Tonnage: 100000	Issue Date: 20/02/1989 Effective Date: 20/02/1989 Modified: - Surrendered Date: - Expiry Date: - Cancelled Date: - Status: Expired

This data is sourced from the Environment Agency and Natural Resources Wales.

3.7 Waste exemptions

Records within 500m	**306**

Activities involving the storage, treatment, use or disposal of waste that are exempt from needing a permit. Exemptions have specific limits and conditions that must be adhered to.

Features are displayed on the Waste and landfill map on **page 41 >**

This data is sourced from Ordnance Survey.

4.2 Current or recent petrol stations

Records within 500m	0

Open, closed, under development and obsolete petrol stations.

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m	6

High voltage underground electricity transmission cables.

Features are displayed on the Current industrial land use map on **page 69 >**

ID	Location	Cable Set	Cable Route	Details	
F	187m NE	CABLE SECTION 06	MELKSHAM - THINGLEY JUNCTION	Cable Make: - Cable Type: A/C Operating Voltage (kV): 33	Year of installation: Not specified Cable in tunnel? Not specified

H	481m NE	CABLE SECTION 05	MELKSHAM - THINGLEY JUNCTION	Cable Make: - Cable Type: A/C Operating Voltage (kV): 33	Year of installation: Not specified Cable in tunnel? Not specified

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m	0

High pressure underground gas transmission pipelines.

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m	0

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m	0

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

This data is sourced from the Health and Safety Executive.

4.7 Regulated explosive sites

Records within 500m	1

Sites registered and licensed by the Health and Safety Executive under the Manufacture and Storage of Explosives Regulations 2005 (MSER). The last update to this data was in April 2011.

Features are displayed on the Current industrial land use map on **page 69 >**

ID	Location	Company	Operational Address
8	22m W	Chemring Energetics Uk Ltd	Lea Park, Monks Lane, Corsham, Wilts, SN13 9PH

This data is sourced from the Health and Safety Executive.

4.8 Hazardous substance storage/usage

Records within 500m	0

Consents granted for a site to hold certain quantities of hazardous substances at or above defined limits in accordance with the Planning (Hazardous Substances) Regulations 2015.

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m	0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m	0

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.11 Licensed pollutant release (Part A(2)/B)

Records within 500m	0

Records of Part A(2) and Part B installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m	0

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m	21

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

Features are displayed on the Current industrial land use map on **page 69 >**

This data is sourced from the Environment Agency and Natural Resources Wales.

4.14 Pollutant release to surface waters (Red List)

Records within 500m	**0**

Discharges of specified substances under the Environmental Protection (Prescribed Processes and Substances) Regulations 1991.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.15 Pollutant release to public sewer

Records within 500m	**0**

Discharges of Special Category Effluents to the public sewer.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.16 List 1 Dangerous Substances

Records within 500m	**0**

Discharges of substances identified on List I of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.17 List 2 Dangerous Substances

Records within 500m	2

Discharges of substances identified on List II of European Directive E 2006/11/EC, and regulated under the Environmental Damage (Prevention and Remediation) Regulations 2015.

Features are displayed on the Current industrial land use map on **page 69 >**

ID	Location	Name	Status	Receiving Water	Authorised Substances
D	111m N	Aep (chippenham) Ltd	Active	-	Chromium, Copper, Lead, Nickel, Zinc
D	111m N	Thingley Stw	Not Active	None	Iron, pH

This data is sourced from the Environment Agency and Natural Resources Wales.

4.18 Pollution Incidents (EA/NRW)

Records within 500m	7

Records of substantiated pollution incidents. Since 2006 this data has only included category 1 (major) and 2 (significant) pollution incidents.

Features are displayed on the Current industrial land use map on **page 69 >**

ID	Location	Details	
4	2m N	Incident Date: 18/03/2002 Incident Identification: 64852 Pollutant: Specific Waste Materials Pollutant Description: Household Waste	Water Impact: Category 4 (No Impact) Land Impact: Category 3 (Minor) Air Impact: Category 4 (No Impact)
5	7m S	Incident Date: 11/09/2003 Incident Identification: 189142 Pollutant: Specific Waste Materials Pollutant Description: Household Waste	Water Impact: Category 4 (No Impact) Land Impact: Category 3 (Minor) Air Impact: Category 4 (No Impact)
E	164m N	Incident Date: 13/08/2013 Incident Identification: 1147359 Pollutant: Sewage Materials Pollutant Description: Final Effluent	Water Impact: Category 2 (Significant) Land Impact: Category 4 (No Impact) Air Impact: Category 4 (No Impact)
E	168m N	Incident Date: 18/08/2015 Incident Identification: 1365533 Pollutant: Sewage Materials Pollutant Description: Final Effluent	Water Impact: Category 2 (Significant) Land Impact: Category 4 (No Impact) Air Impact: Category 4 (No Impact)

ID	Location	Details	
42	248m NW	Incident Date: 12/09/2001 Incident Identification: 30434 Pollutant: Sewage Materials Pollutant Description: Other Sewage Material	Water Impact: Category 3 (Minor) Land Impact: Category 3 (Minor) Air Impact: Category 3 (Minor)
47	317m SW	Incident Date: 30/08/2001 Incident Identification: 27960 Pollutant: General Biodegradable Materials and Wastes Pollutant Description: Other General Biodegradable Material or Waste	Water Impact: Category 4 (No Impact) Land Impact: Category 3 (Minor) Air Impact: Category 4 (No Impact)

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m	0

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

4.20 Pollution inventory waste transfers

Records within 500m	0

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

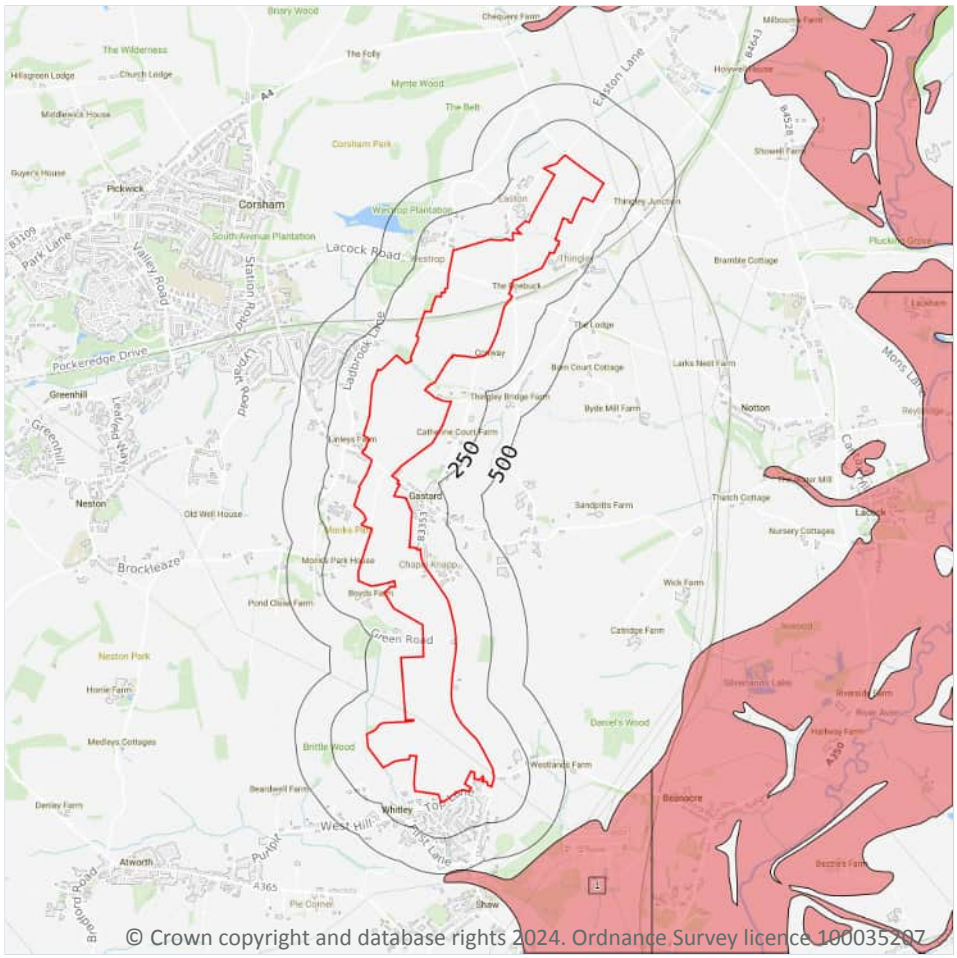

4.21 Pollution inventory radioactive waste

Records within 500m	0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer

Site Outline

Search buffers in metres (m)

- Principal
- Secondary A
- Secondary B
- Secondary Undifferentiated
- Unproductive
- Unknown

5.1 Superficial aquifer

Records within 500m	1

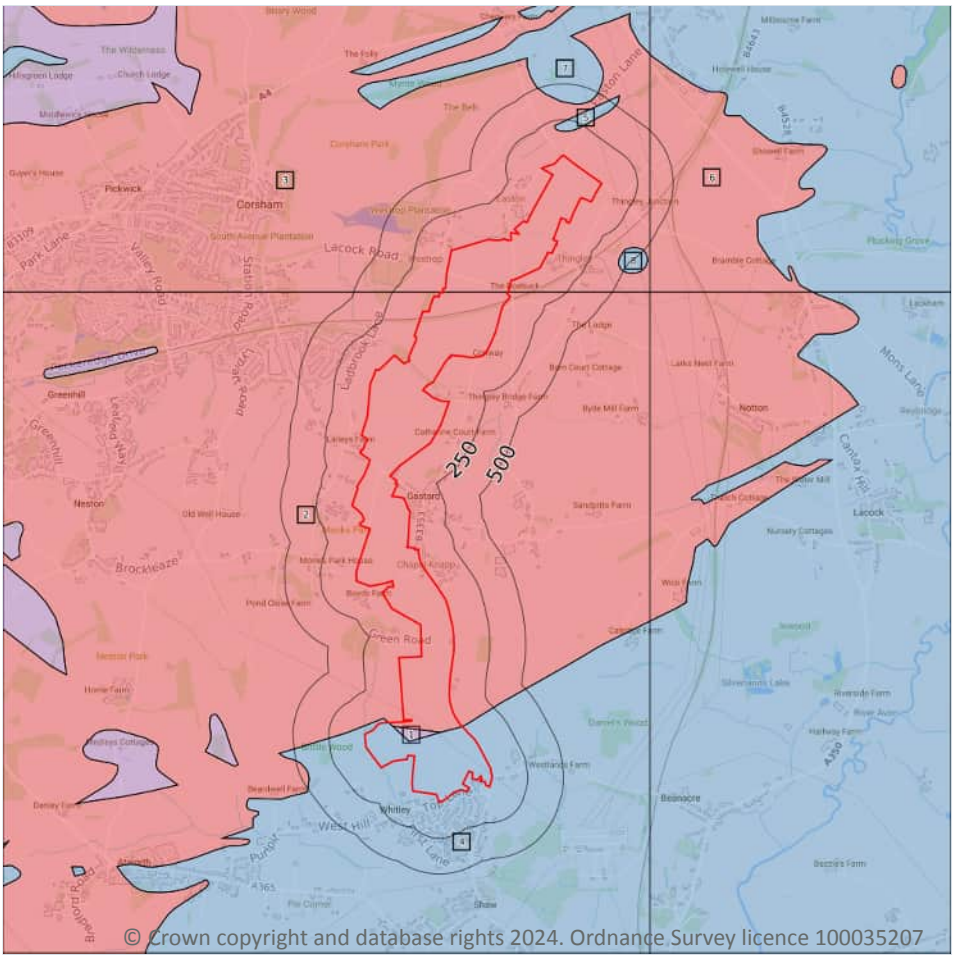

Aquifer status of groundwater held within superficial geology.

Features are displayed on the Hydrogeology map on **page 81 >**

ID	Location	Designation	Description
1	486m S	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Bedrock aquifer

Site Outline

Search buffers in metres (m)

- Principal
- Secondary A
- Secondary B
- Secondary Undifferentiated
- Unproductive

5.2 Bedrock aquifer

Records within 500m	8

Aquifer status of groundwater held within bedrock geology.

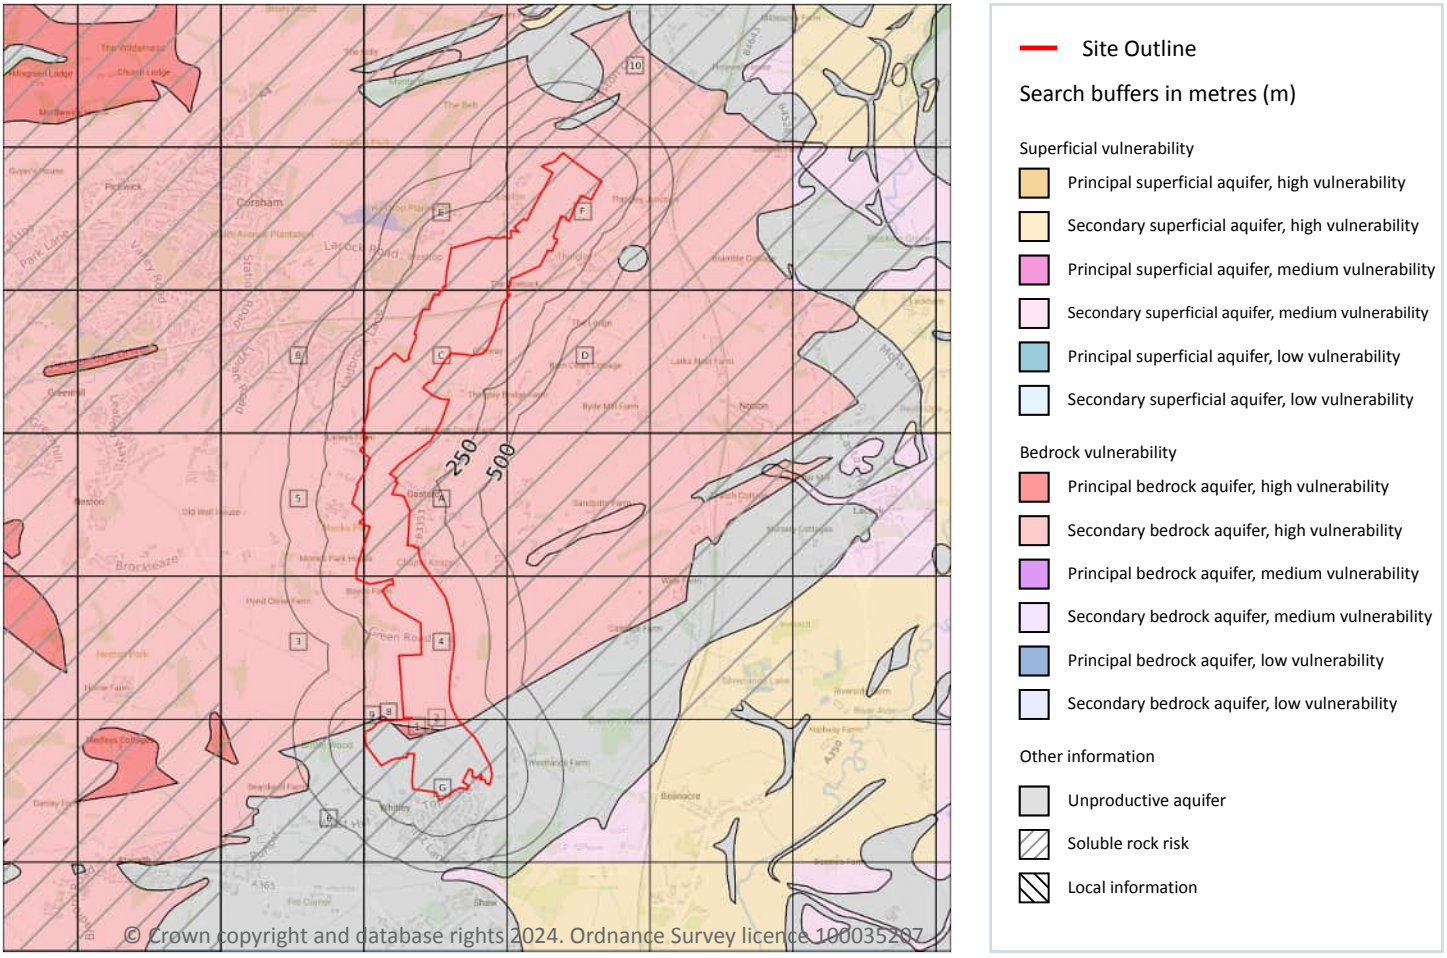

Features are displayed on the Bedrock aquifer map on **page 82 >**

ID	Location	Designation	Description
1	On site	Principal	Geology of high intergranular and/or fracture permeability, usually providing a high level of water storage and may support water supply/river base flow on a strategic scale. Generally principal aquifers were previously major aquifers
2	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

ID	Location	Designation	Description
3	**On site**	**Secondary A**	**Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers**
4	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
5	170m N	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
6	337m NE	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
7	367m N	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
8	410m NE	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Groundwater vulnerability

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

5.3 Groundwater vulnerability

Records within 50m	16

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on **page 84 >**

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
1	On site	Summary Classification: Principal bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: Low Infiltration value: 40-70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Principal Flow mechanism: Well connected fractures
2	On site	Summary Classification: Secondary bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: Low Infiltration value: 40-70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures
3	On site	Summary Classification: Secondary bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures
4	On site	Summary Classification: Secondary bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures
5	On site	Summary Classification: Secondary bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures
A	On site	Summary Classification: Secondary bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: High Infiltration value: >70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures
B	On site	Summary Classification: Secondary bedrock aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, No Superficial Aquifer	Leaching class: Intermediate Infiltration value: 40-70% Dilution value: 300-550mm/year	Vulnerability: - Aquifer type: - Thickness: <3m Patchiness value: <90% Recharge potential: No Data	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.4 Groundwater vulnerability- soluble rock risk

Records on site	**7**

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
A	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**5.0%**
B	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**28.999999999999996%**
C	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**28.999999999999996%**
D	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**68.0%**
E	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**76.0%**

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
F	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**82.0%**
G	**Significant soluble rocks are likely to be present. Problems unlikely except with considerable surface or subsurface water flow.**	**1.0%**

This data is sourced from the British Geological Survey and the Environment Agency.

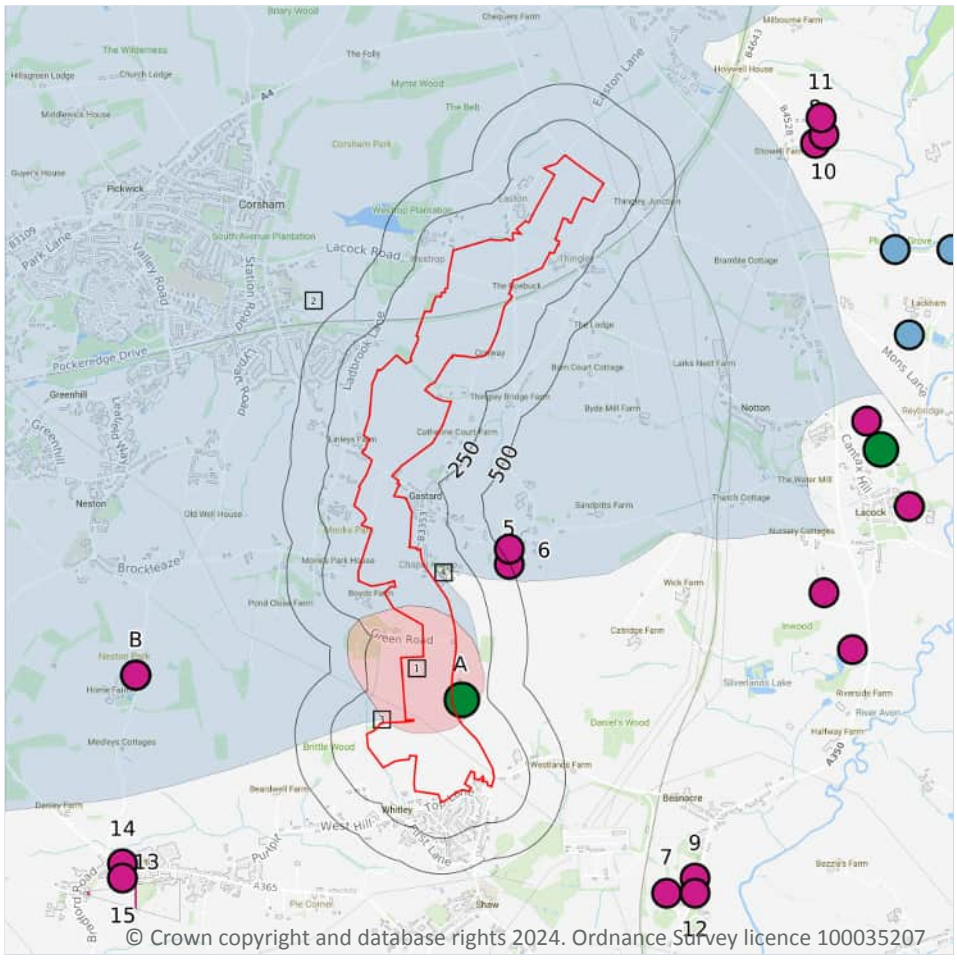

5.5 Groundwater vulnerability- local information

Records on site	**0**

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk ↗.

This data is sourced from the British Geological Survey and the Environment Agency.

Abstractions and Source Protection Zones

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

5.6 Groundwater abstractions

Records within 2000m	16

Licensed groundwater abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, between two points (line data) or a larger area.

Features are displayed on the Abstractions and Source Protection Zones map on **page 89 >**

5.7 Surface water abstractions

Records within 2000m	**0**

Licensed surface water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.8 Potable abstractions

Records within 2000m	**3**

Licensed potable water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

Features are displayed on the Abstractions and Source Protection Zones map on **page 89 >**

This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m **4**

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

Features are displayed on the Abstractions and Source Protection Zones map on **page 89 >**

ID	Location	Type	Description
1	**On site**	**1**	**Inner catchment**
2	**On site**	**2**	**Outer catchment**
3	18m S	3	Total catchment
4	50m S	3	Total catchment

This data is sourced from the Environment Agency and Natural Resources Wales.

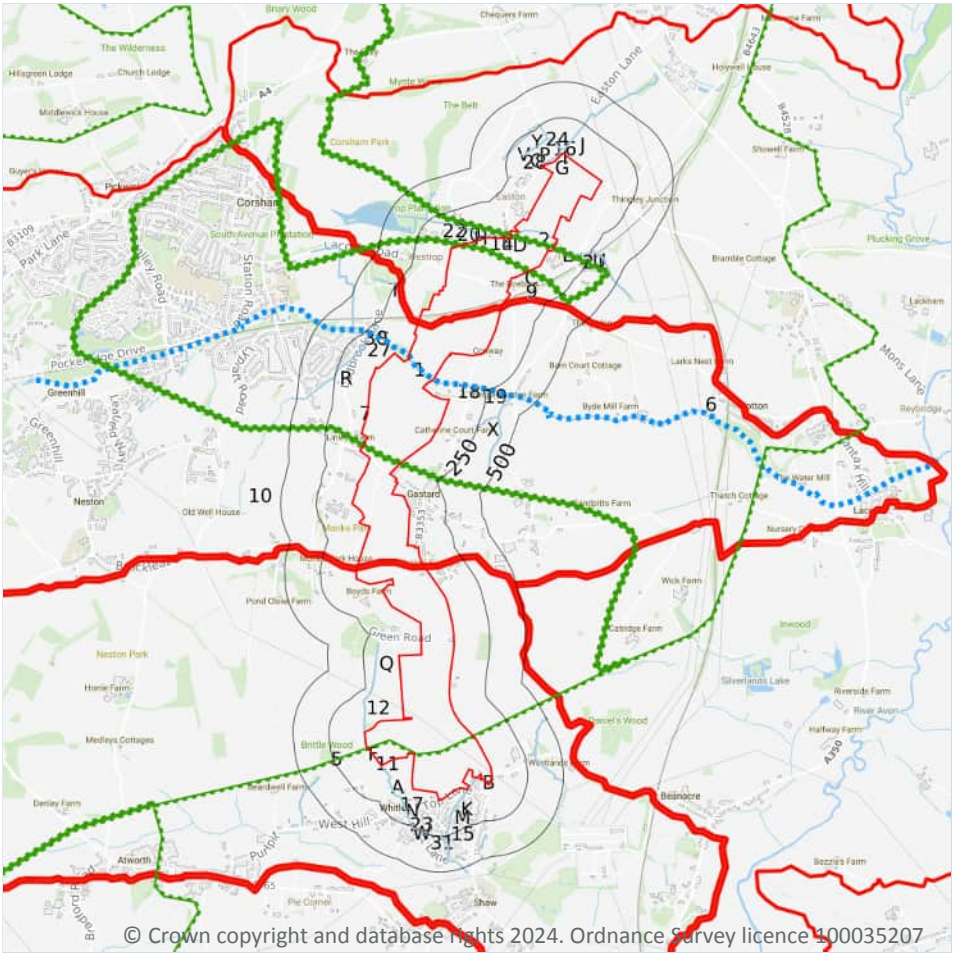

5.10 Source Protection Zones (confined aquifer)

Records within 500m	0

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

This data is sourced from the Environment Agency and Natural Resources Wales.

This data is sourced from the Ordnance Survey.

6.2 Surface water features

Records within 250m	**25**

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on **page 96 >**

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site	3

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on **page 96 >**

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
5	**On site**	**River**	**South Bk - source to conf R Avon (Brist)**	**GB109053021930**	**Avon Bristol Rural**	**Avon Bristol and Somerset Nort**

7	**On site**	**River**	**Bydemill Bk - source to conf RIver Avon (Brist)**	**GB109053021960**	**Avon Bristol Rural**	**Avon Bristol and Somerset Nort**

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified	3

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on **page 96 >**

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year

This data is sourced from the Environment Agency and Natural Resources Wales.

6.5 WFD Groundwater bodies

Records on site	2

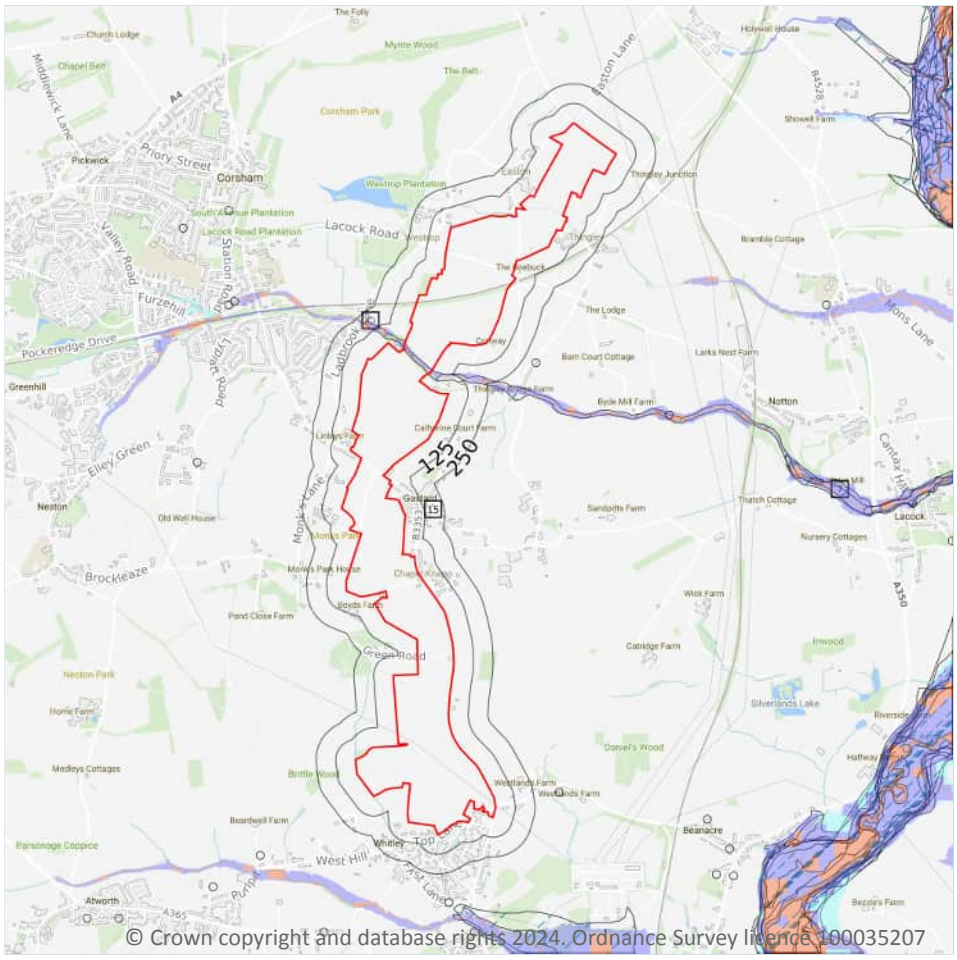

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

Features are displayed on the Hydrology map on **page 96 >**

7 River and coastal flooding

Site Outline

Search buffers in metres (m)

River and coastal flooding:

- High
- Medium
- Low
- Very Low
- Historical Flood Events
- Areas Used for Flood Storage
- Areas Benefiting from Flood Defences
- Flood Defences

7.1 Risk of flooding from rivers and the sea

Records within 50m	14

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m within the Risk of Flooding from Rivers and Sea (RoFRaS)/Flood Risk Assessment Wales (FRAW) models. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition. The risk categories for RoFRaS for rivers and the sea and FRAW for rivers are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance). The risk categories for FRAW for the sea are; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 200 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 200 chance) or High (greater than or equal to 1 in 30 chance).

Features are displayed on the River and coastal flooding map on **page 104 >**

Distance	Flood risk category
On site	**High**
0 - 50m	High

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m	**3**

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

Features are displayed on the River and coastal flooding map on **page 104 >**

ID	Location	Event name	Date of flood	Flood source	Flood cause	Type of flood
7	**On site**	**Ea112_Byde Mill Brook_Thingley_Lacock**	**1968-07-10 1968-07-10**	**Main river**	**Channel capacity exceeded (no raised defences)**	**Fluvial**

C	157m NW	This Represents Flooding In The Area In 1978	1978-03-06 1978-03-06	Main river	Other	Fluvial

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m	**0**

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m	0

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

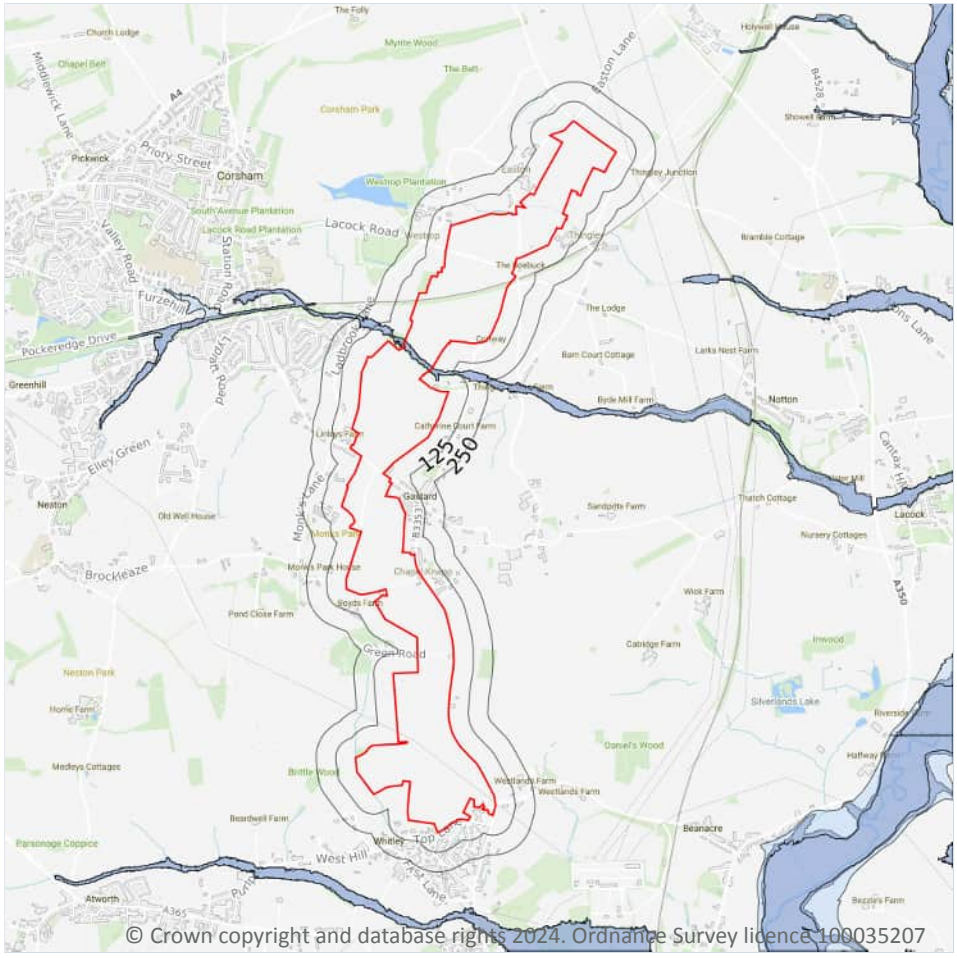

7.5 Flood Storage Areas

Records within 250m	0

Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

This data is sourced from the Environment Agency and Natural Resources Wales.

River and coastal flooding - Flood Zones

Site Outline

Search buffers in metres (m)

Flood zone 2

Flood zone 3

7.6 Flood Zone 2

Records within 50m	1

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

Features are displayed on the River and coastal flooding map on **page 104 >**

Location	Type
On site	**Zone 2 - (Fluvial /Tidal Models)**

This data is sourced from the Environment Agency and Natural Resources Wales.

7.7 Flood Zone 3

Records within 50m	1

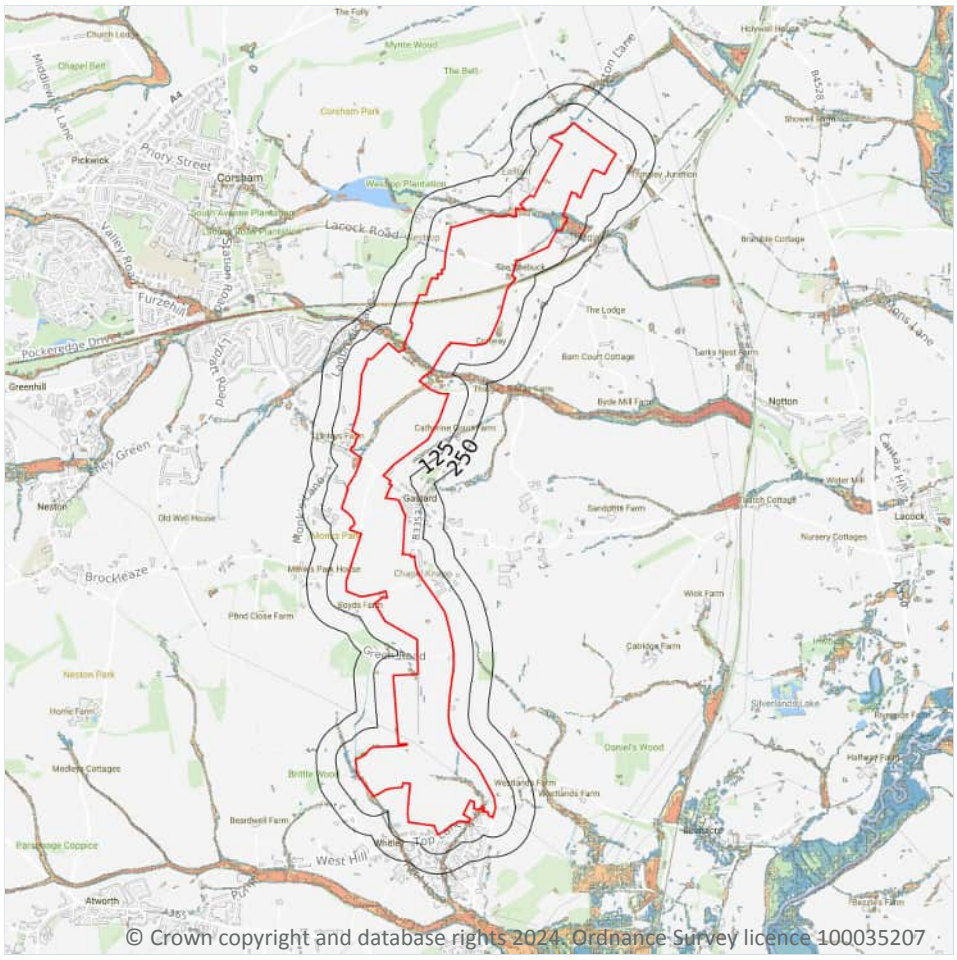

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

Features are displayed on the River and coastal flooding map on **page 104 >**

Location	Type
On site	**Zone 3 - (Fluvial Models)**

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding

Site Outline
Search buffers in metres (m)

1 in 1000 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 250 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 100 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 30 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

8.1 Surface water flooding

Highest risk on site	**1 in 30 year, Greater than 1.0m**
Highest risk within 50m	**1 in 30 year, Greater than 1.0m**

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on **page 109 >**

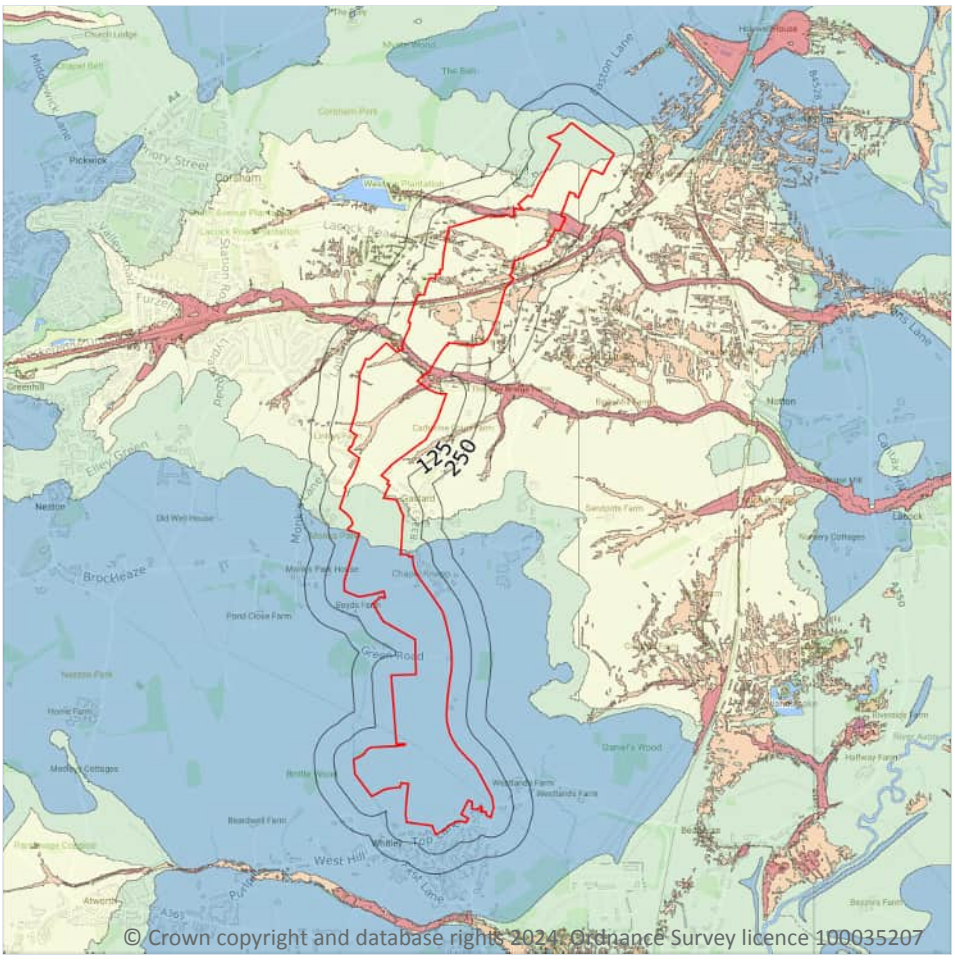

The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Greater than 1.0m
1 in 250 year	Greater than 1.0m
1 in 100 year	Greater than 1.0m
1 in 30 year	Greater than 1.0m

This data is sourced from Ambiental Risk Analytics.

Low

Negligible

9.1 Groundwater flooding

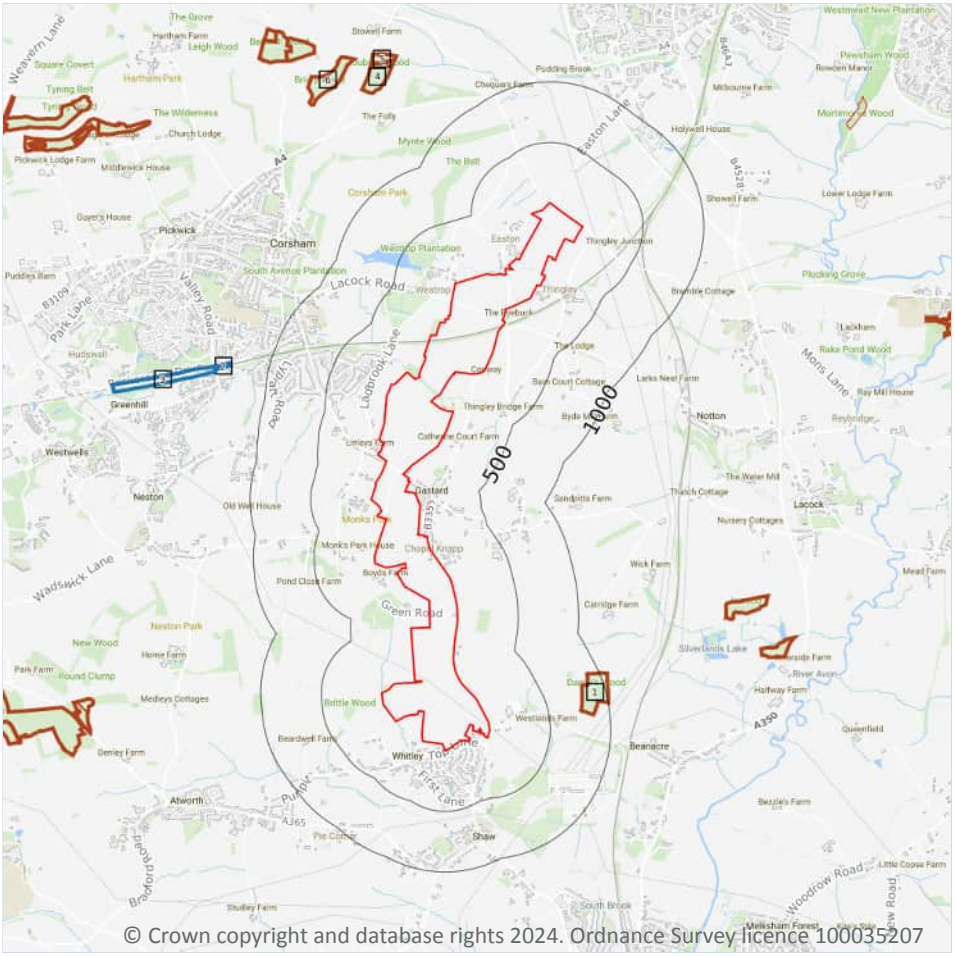

Highest risk on site	**High**
Highest risk within 50m	**High**

Groundwater flooding is caused by unusually high groundwater levels. It occurs when the water table rises above the ground surface or within underground structures such as basements or cellars. Groundwater flooding tends to exhibit a longer duration than surface water flooding, possibly lasting for weeks or months, and as a result it can cause significant damage to property. This risk assessment is based on a 1 in 100 year return period and a 5m Digital Terrain Model (DTM).

Features are displayed on the Groundwater flooding map on **page 111 >**

This data is sourced from Ambiental Risk Analytics.

10 Environmental designations

Site Outline

Search buffers in metres (m)

Sites of Special Scientific Interest (SSSI)

Special Areas of Conservation (SAC)

Local Nature Reserves (LNR)

Designated Ancient Woodland

Green Belt

10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m	2

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

Features are displayed on the Environmental designations map on **page 112 >**

ID	Location	Name	Data source
2	1310m NW	Corsham Railway Cutting	Natural England

ID	Location	Name	Data source
3	1429m NW	Corsham Railway Cutting	Natural England

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m	0

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m	0

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m	0

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m	0

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m	0

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m	4

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

Features are displayed on the Environmental designations map on **page 112 >**

ID	Location	Name	Woodland Type
1	768m SE	Daniels Wood	Ancient & Semi-Natural Woodland
4	1626m N	Jubilee Wood	Ancient Replanted Woodland
5	1703m N	Jubilee Wood	Ancient & Semi-Natural Woodland
6	1882m N	Briary Wood	Ancient Replanted Woodland

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m	0

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m	0

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m	0

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m	0

Areas designated to prevent urban sprawl by keeping land permanently open.

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m	0

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m	0

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m	0

Special Protection Areas (SPAs) are areas designated (or 'classified') under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.15 Nitrate Sensitive Areas

Records within 2000m	0

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones

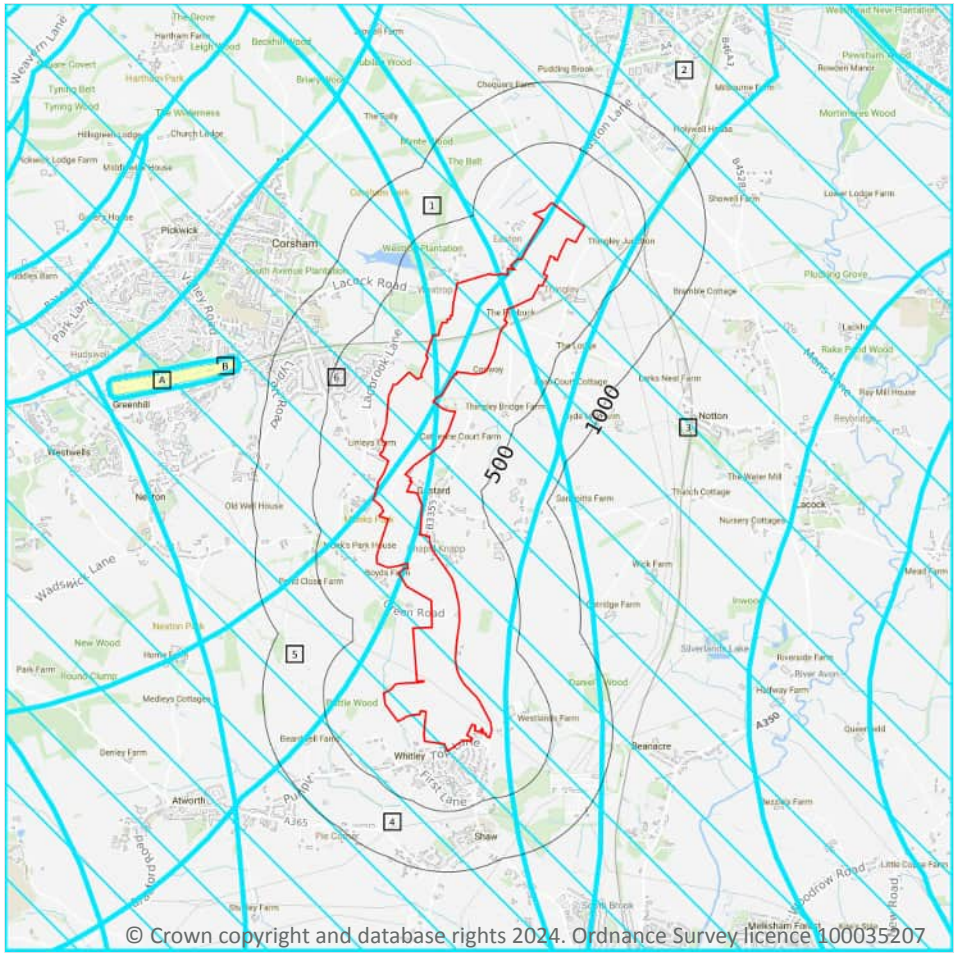

Records within 2000m	5

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

Location	Name	Type	NVZ ID	Status

10.17 SSSI Impact Risk Zones

Records on site	6

Developed to allow rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

Features are displayed on the SSSI Impact Zones and Units map on **page 117 >**

ID	Location	Type of developments requiring consultation
1	On site	Infrastructure - Airports, helipads and other aviation proposals. Air pollution - Livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 750m², manure stores > 3500t. Combustion - General combustion processes >50MW energy input. Incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion.
2	On site	Infrastructure - Airports, helipads and other aviation proposals.
3	On site	Infrastructure - Airports, helipads and other aviation proposals. Air pollution - Livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 750m², manure stores > 3500t.
4	On site	Infrastructure - Airports, helipads and other aviation proposals. Air pollution - Livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 4000m². Combustion - General combustion processes >50MW energy input. Incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion.
5	On site	All applications - All planning applications (except householder) outside or extending outside existing settlements/urban areas affecting greenspace, farmland, semi natural habitats or landscape features such as trees, hedges, streams, rural buildings/structures. Infrastructure - Airports, helipads and other aviation proposals. Air pollution - Livestock & poultry units with floorspace > 500m², slurry lagoons & digestate stores > 4000m². Combustion - General combustion processes >50MW energy input. Incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion.
6	On site	All applications - All planning applications (except householder) outside or extending outside existing settlements/urban areas affecting greenspace, farmland, semi natural habitats or landscape features such as trees, hedges, streams, rural buildings/structures. Combustion - General combustion processes >50MW energy input. Incl: energy from waste incineration, other incineration, landfill gas generation plant, pyrolysis/gasification, anaerobic digestion, sewage treatment works, other incineration/ combustion.

This data is sourced from Natural England.

10.18 SSSI Units

Records within 2000m	2

Divisions of SSSIs used to record management and condition details. Units are the smallest areas for which Natural England gives a condition assessment, however, the size of units varies greatly depending on the types of management and the conservation interest.

Features are displayed on the SSSI Impact Zones and Units map on **page 117 >**

ID: B
Location: 1310m NW

11 Visual and cultural designations

11.1 World Heritage Sites

Records within 250m	0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m	0

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m	0

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m	53

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

Features are displayed on the Visual and cultural designations map on **page 120 >**

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.5 Conservation Areas

Records within 250m	3

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

Features are displayed on the Visual and cultural designations map on **page 120 >**

ID	Location	Name	District	Date of designation
A	**On site**	**Easton**	**Wiltshire**	**unknown**
1	10m N	Corsham	Wiltshire	1970
34	229m S	Gastard	Wiltshire	unknown

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m	**0**

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.7 Registered Parks and Gardens

Records within 250m	**1**

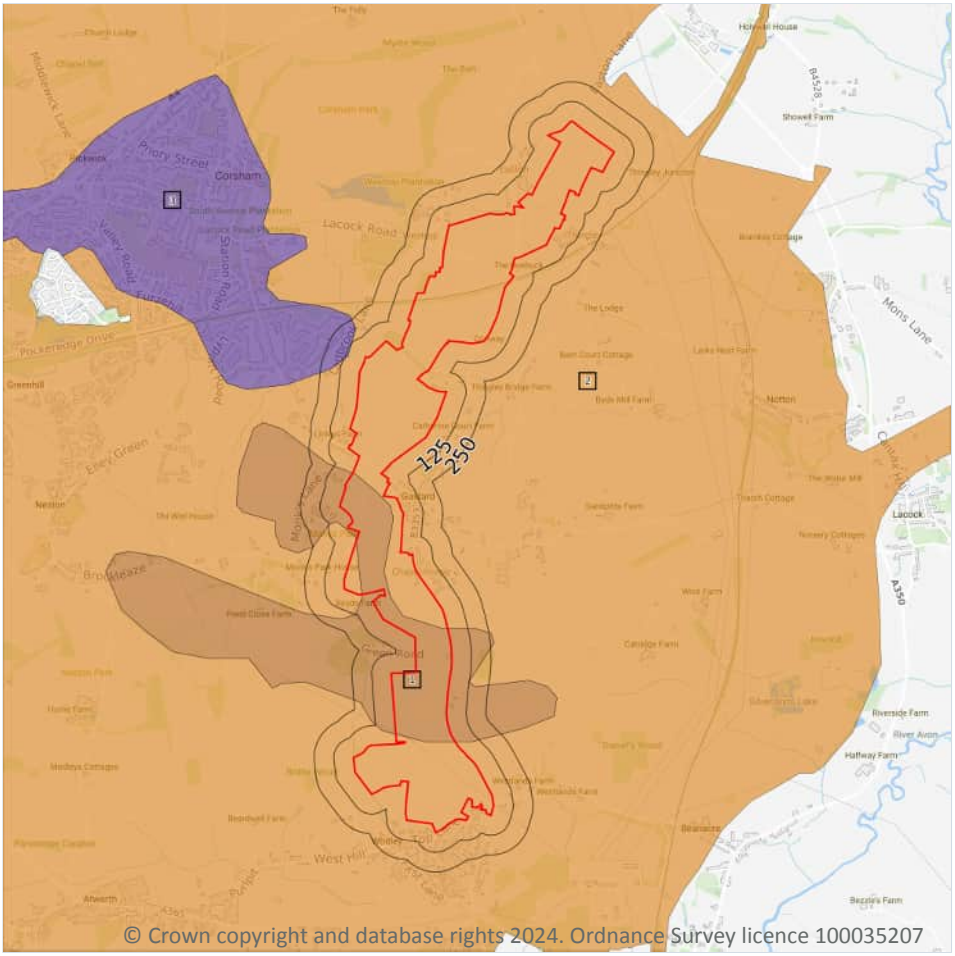

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

Features are displayed on the Visual and cultural designations map on **page 120 >**

ID	Location	Name	Grade
25	159m N	Corsham Court	II*

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

12 Agricultural designations

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

12.1 Agricultural Land Classification

Records within 250m	3

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on **page 125 >**

ID	Location	Classification	Description
1	**On site**	**Grade 2**	**Very good quality agricultural land. Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural and horticultural crops can usually be grown but on some land in the grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1.**
2	**On site**	**Grade 3**	**Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.**
3	109m NW	Urban	Non-agricultural/no quality assigned

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m	**0**

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m	**0**

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

This data is sourced from the Forestry Commission.

12.4 Environmental Stewardship Schemes

Records within 250m	**8**

Environmental Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. The schemes identified may be historical schemes that have now expired, or may still be active.

Location	Reference	Scheme	Start Date	End date
On site	**AG00283056**	**Entry Level plus Higher Level Stewardship**	**01/02/2009**	**31/01/2023**

12.5 Countryside Stewardship Schemes

Records within 250m	**26**

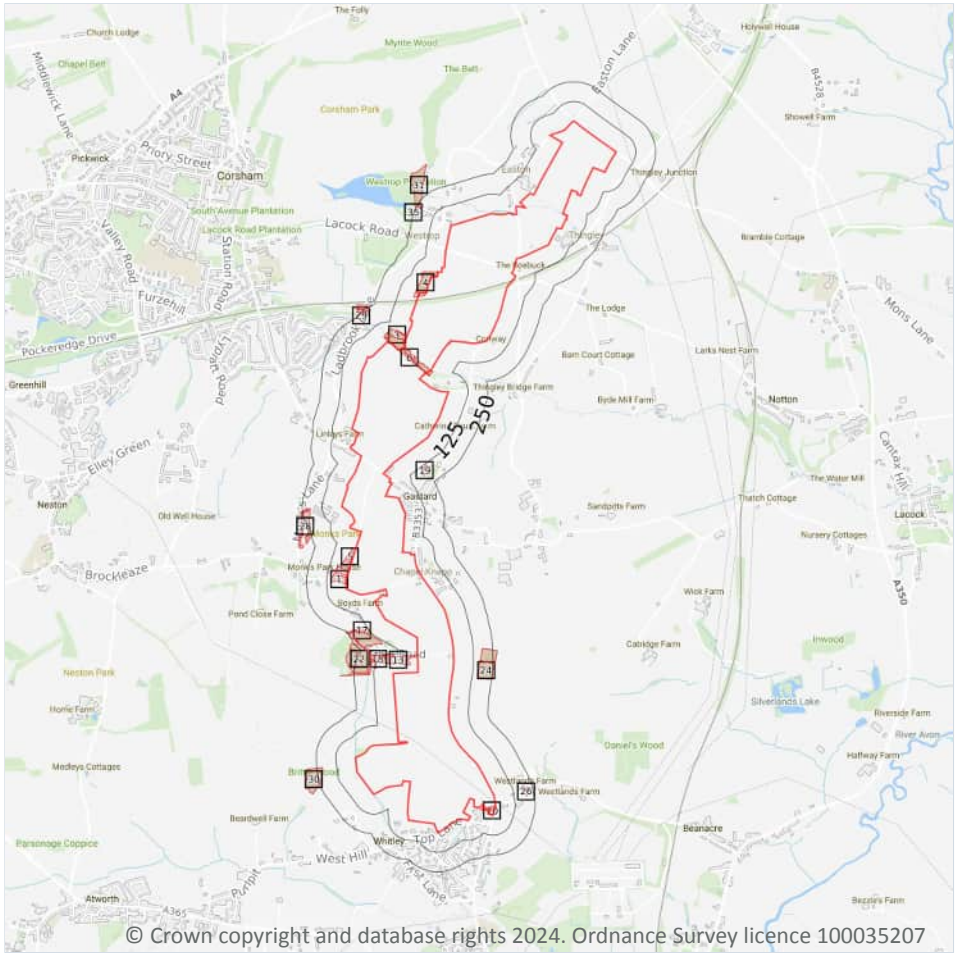

Countryside Stewardship covers a range of schemes that provide financial incentives to farmers, foresters and land managers to look after and improve the environment. Main objectives are to improve the farmed environment for wildlife and to reduce diffuse water pollution.

Location	Reference	Scheme	Start Date	End Date
On site	**1437968**	**Countryside Stewardship (Middle Tier)**	**01/01/2023**	**31/12/2027**

ID	Location	Main Habitat	Other habitats
33	231m NW	No main habitat but additional habitats present	Main habitat: DWOOD (INV > 50%)
34	241m W	Deciduous woodland	Main habitat: DWOOD (INV > 50%)
35	249m N	Deciduous woodland	Main habitat: DWOOD (INV > 50%)

This data is sourced from Natural England.

13.2 Habitat Networks

Records within 250m	0

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m	0

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

This data is sourced from Natural England.

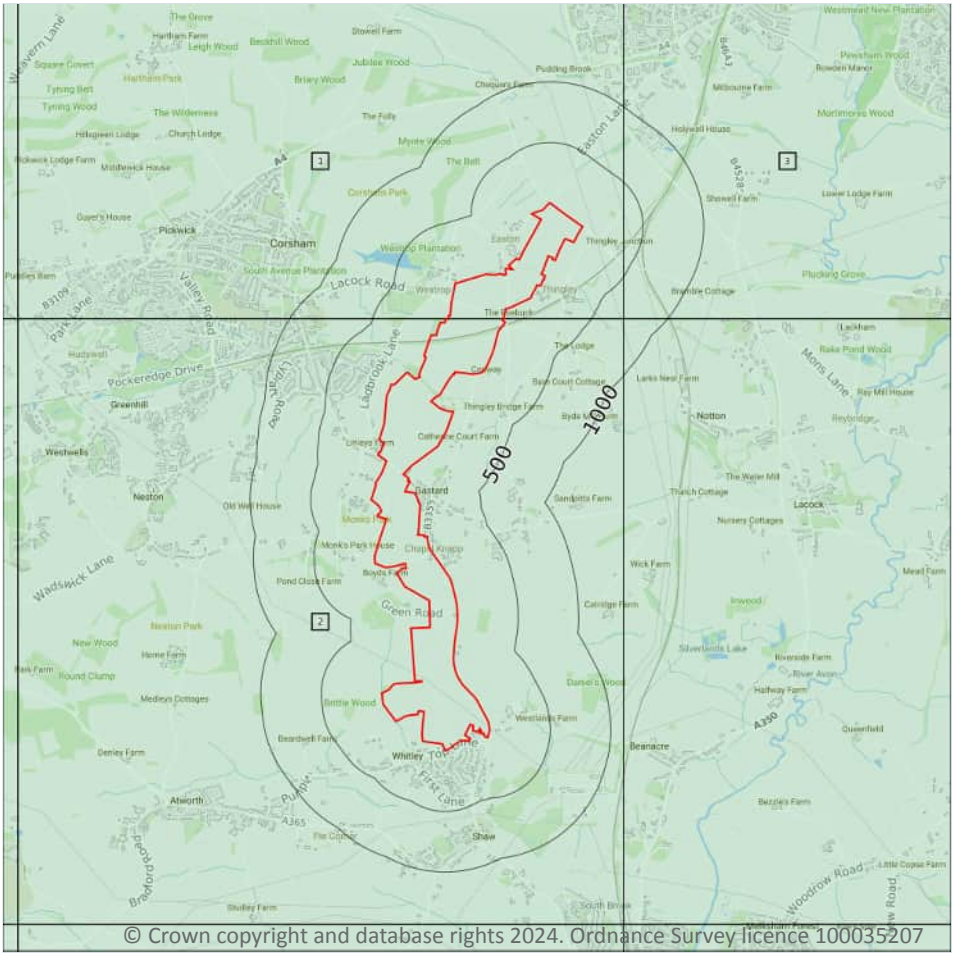

13.4 Limestone Pavement Orders

Records within 250m	0

Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

14 Geology 1:10,000 scale - Availability

Site Outline

Search buffers in metres (m)

Full coverage

Partial coverage

No coverage

14.1 10k Availability

Records within 500m	3

An indication on the coverage of 1:10,000 scale geology data for the site, the most detailed dataset provided by the British Geological Survey. Either 'Full', 'Partial' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:10,000 scale - Availability map on **page 132 >**

This data is sourced from the British Geological Survey.

14.4 Landslip (10k)

Records within 500m	**0**

Mass movement deposits on BGS geological maps at 1:10,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Bedrock

Site Outline

Search buffers in metres (m)

Bedrock faults and other linear features (10k)

Bedrock geology (10k)
Please see table for more details.

14.5 Bedrock geology (10k)

Records within 500m **19**

Bedrock geology at 1:10,000 scale. The main mass of rocks forming the Earth and present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 136 >**

- Very low
- Low
- Moderate
- High

17.1 Shrink swell clays

Records within 50m	3

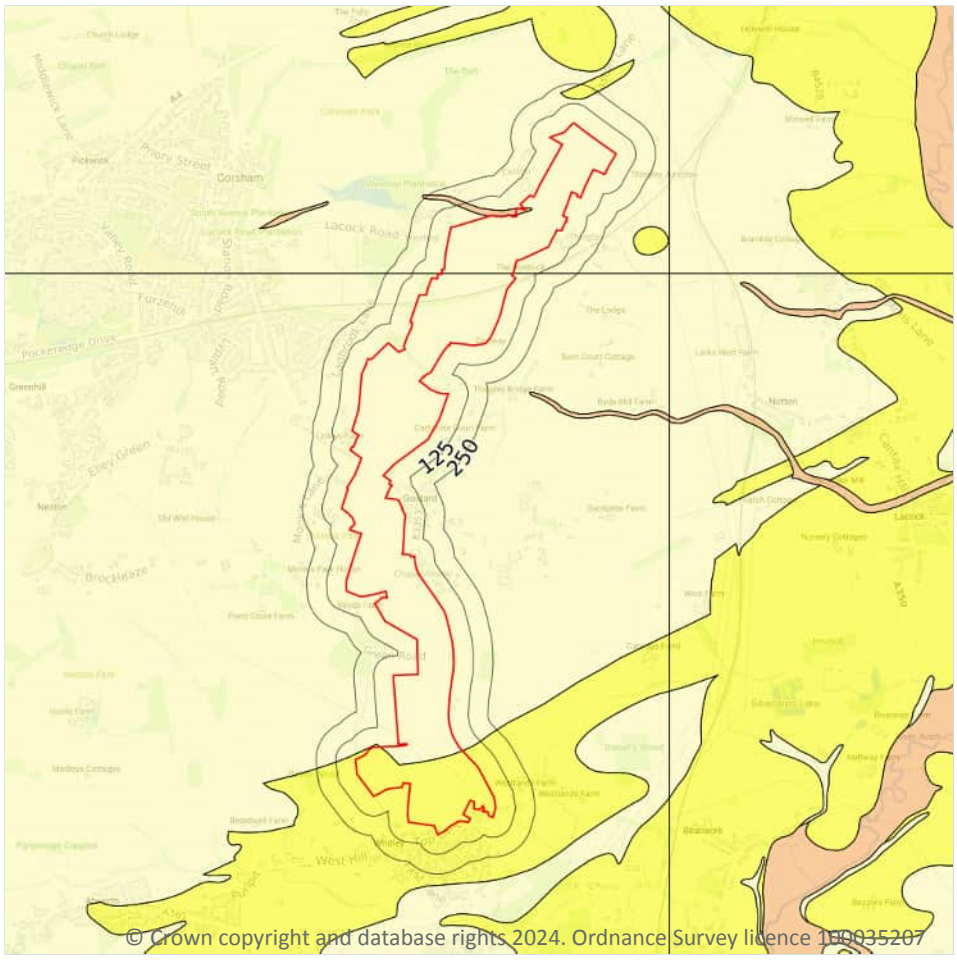

The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

Features are displayed on the Natural ground subsidence - Shrink swell clays map on **page 148 >**

Location	Hazard rating	Details
On site	**Negligible**	**Ground conditions predominantly non-plastic.**
On site	**Very low**	**Ground conditions predominantly low plasticity.**
On site	**Low**	**Ground conditions predominantly medium plasticity.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.2 Running sands

Records within 50m	3

The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

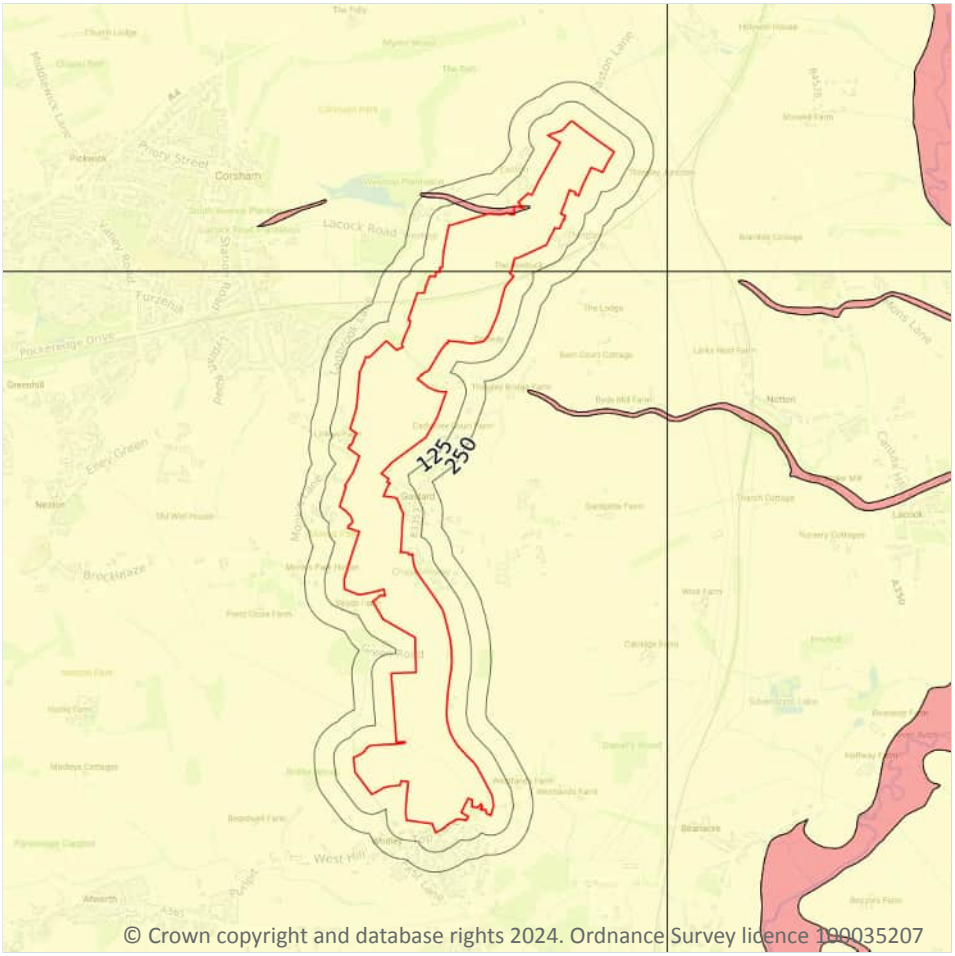

Features are displayed on the Natural ground subsidence - Running sands map on **page 150 >**

Location	Hazard rating	Details
On site	**Negligible**	**Running sand conditions are not thought to occur whatever the position of the water table. No identified constraints on lands use due to running conditions.**

Location	Hazard rating	Details
On site	**Very low**	**Running sand conditions are unlikely. No identified constraints on land use due to running conditions unless water table rises rapidly.**
On site	**Low**	**Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.3 Compressible deposits

Records within 50m	2

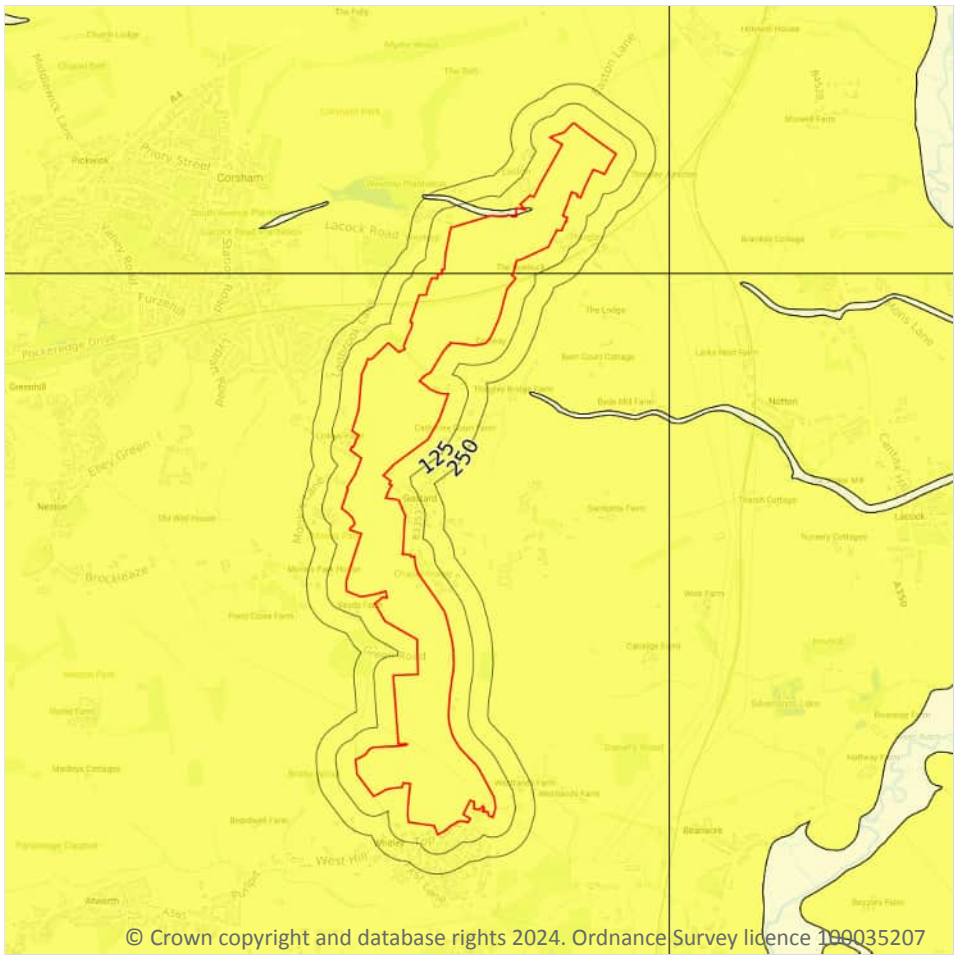

The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

Features are displayed on the Natural ground subsidence - Compressible deposits map on **page 152 >**

Location	Hazard rating	Details
On site	**Negligible**	**Compressible strata are not thought to occur.**
On site	**Moderate**	**Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Collapsible deposits

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.4 Collapsible deposits

Records within 50m	2

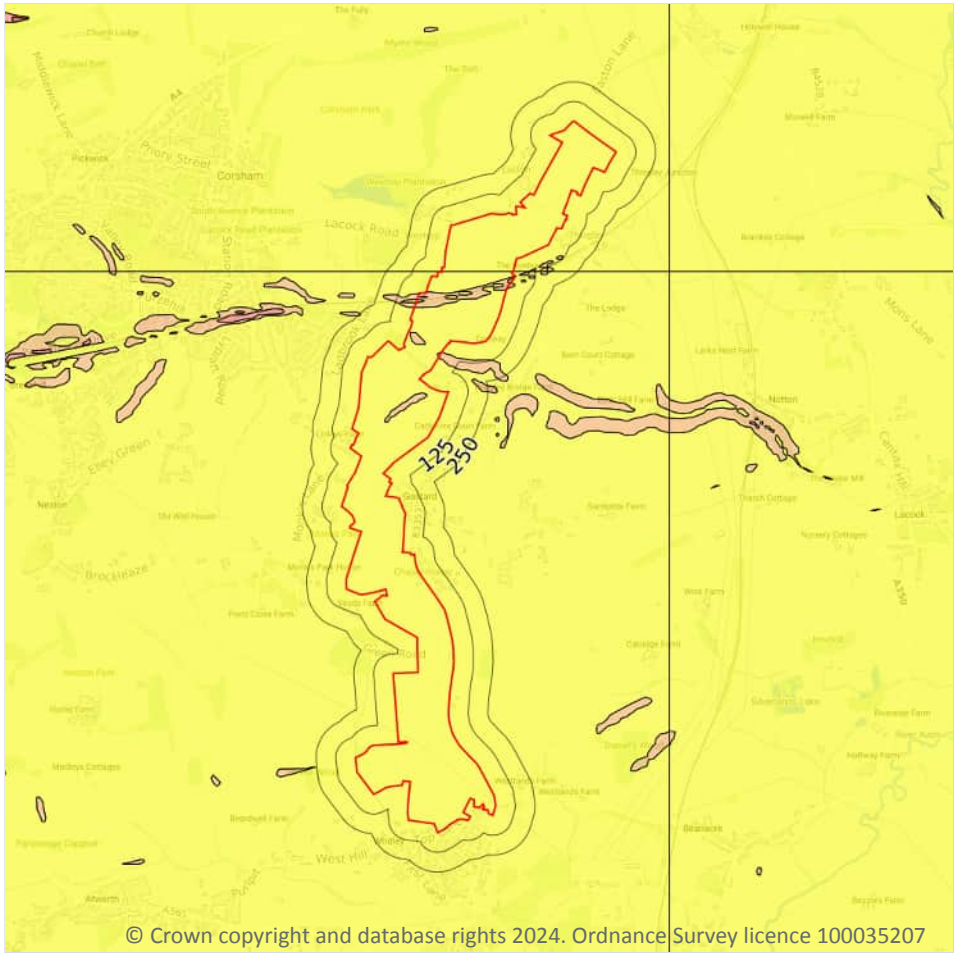

The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on **page 154 >**

Location	Hazard rating	Details
On site	**Negligible**	**Deposits with potential to collapse when loaded and saturated are believed not to be present.**
On site	**Very low**	**Deposits with potential to collapse when loaded and saturated are unlikely to be present.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Landslides

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.5 Landslides

Records within 50m	5

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

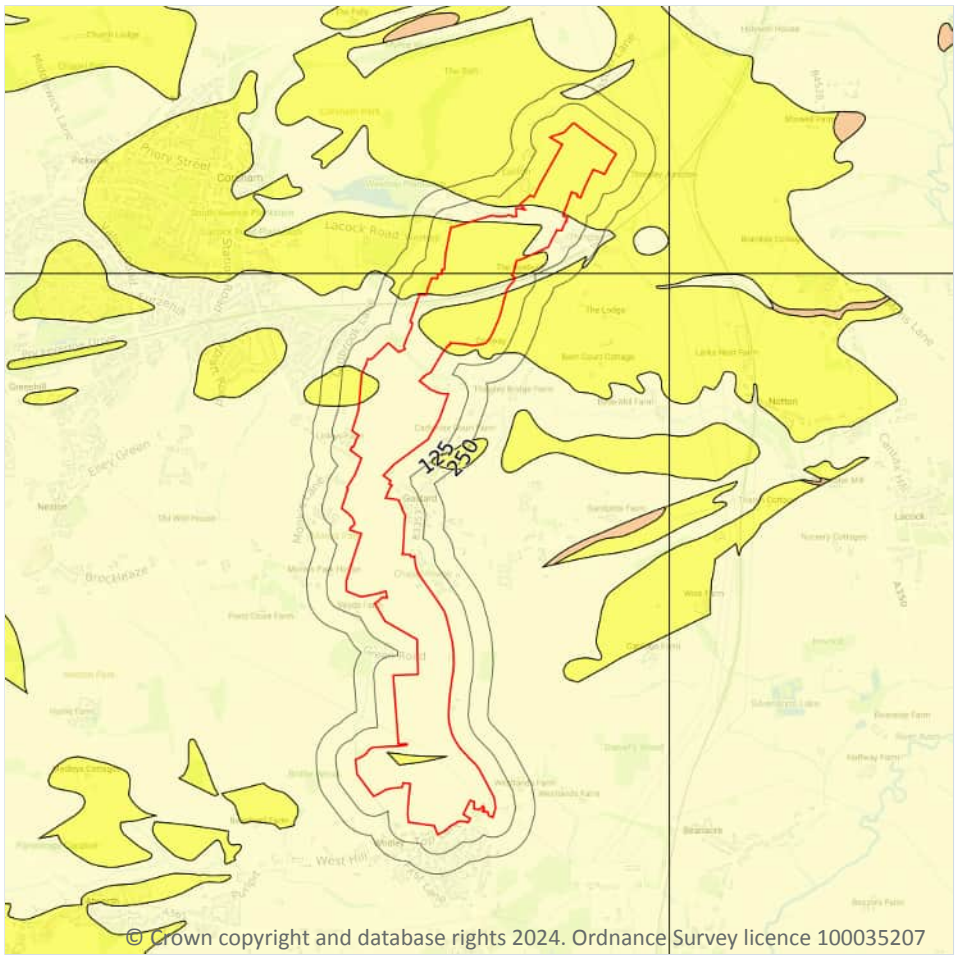

Features are displayed on the Natural ground subsidence - Landslides map on **page 155 >**

Location	Hazard rating	Details
On site	**Very low**	**Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.**

Location	Hazard rating	Details
On site	**Low**	**Slope instability problems may be present or anticipated. Site investigation should consider specifically the slope stability of the site.**
On site	**Moderate**	**Slope instability problems are probably present or have occurred in the past. Land use should consider specifically the stability of the site.**
26m N	Low	Slope instability problems may be present or anticipated. Site investigation should consider specifically the slope stability of the site.
46m NE	Low	Slope instability problems may be present or anticipated. Site investigation should consider specifically the slope stability of the site.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.6 Ground dissolution of soluble rocks

Records within 50m	2

The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

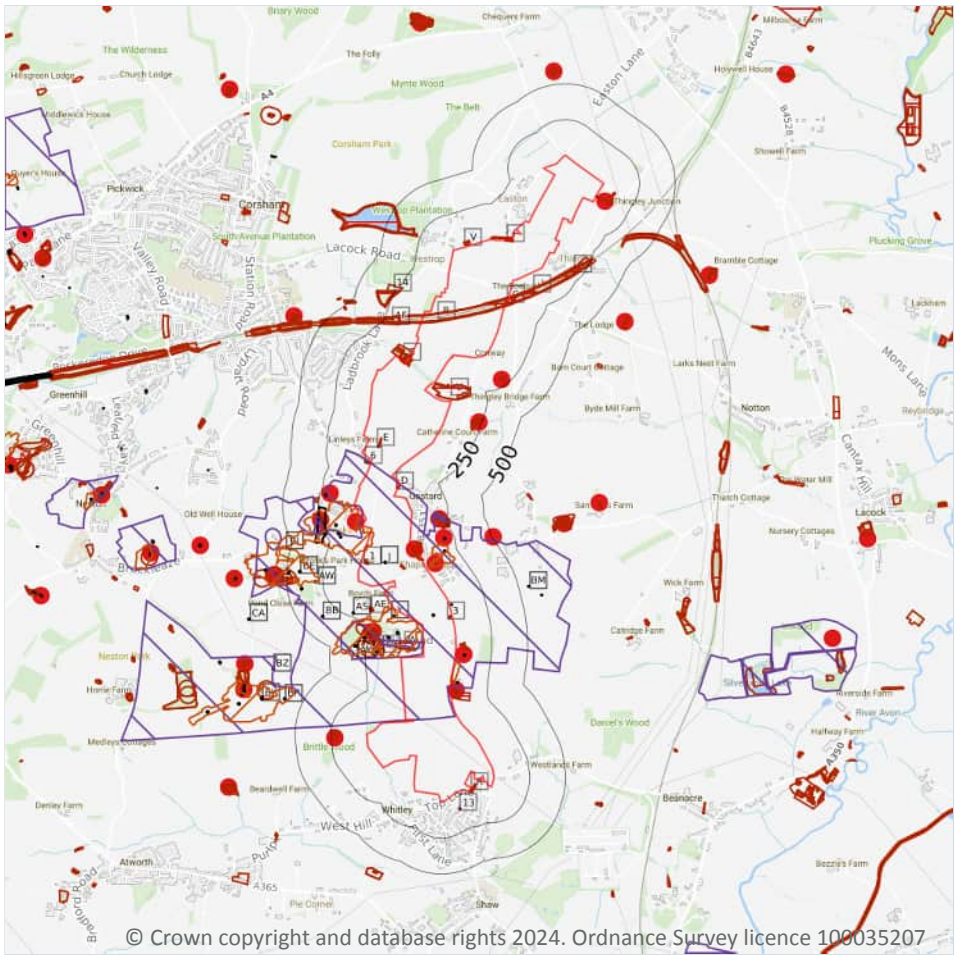

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on **page 157 >**

Location	Hazard rating	Details
On site	**Negligible**	**Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.**

Location	Hazard rating	Details
On site	**Very low**	**Soluble rocks are present within the ground. Few dissolution features are likely to be present. Potential for difficult ground conditions or localised subsidence are at a level where they need not be considered.**

This data is sourced from the British Geological Survey.

Working may be termed Colliery, Mine, Drift Mine, Slant, Level, Adit or Ingoing Eye (Ingaun Ee - Scots) Status description: Site which, at date of entry, has ceased to extract minerals. May be considered as Closed by operator. May be considered to have Active, Dormant or Expired planning permissions by Mineral Planning Authority

This data is sourced from the British Geological Survey.

18.2 Surface ground workings

Records within 250m	**108**

Historical land uses identified from Ordnance Survey mapping that involved ground excavation at the surface. These features may or may not have been subsequently backfilled.

Features are displayed on the Mining and ground workings map on **page 159 >**

This is data is sourced from Ordnance Survey/Groundsure.

18.3 Underground workings

Records within 1000m	**181**

Historical land uses identified from Ordnance Survey mapping that indicate the presence of underground workings e.g. mine shafts.

Features are displayed on the Mining and ground workings map on **page 159 >**

This is data is sourced from Ordnance Survey/Groundsure.

18.4 Underground mining extents

Records within 500m	**0**

This data identifies underground mine workings that could present a potential risk, including adits and seam workings. These features have been identified from BGS Geological mapping and mine plans sourced from the BGS and various collections and sources.

This data is sourced from Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m	**5**

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

Features are displayed on the Mining and ground workings map on **page 159 >**

ID	Location	Site Name	Mineral	Type	Planning Status	Planning Status Date

AR	255m W	Not available	Limestone	Surface mineral working	Valid	Not available

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m	10

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

Features are displayed on the Mining and ground workings map on **page 159 >**

ID	Location	Name	Commodity	Class	Likelihood
M	**On site**	**Not available**	**Building stone (zone of influence)**	**NA**	**Zone of influence only**
M	**On site**	**Monks Park/Ridge**	**Limestone - Bath Stone**	**D**	**Underground mining is considered likely to have occurred within or close to the area. The location, extent and nature of mining should be considered in any site investigation. Potential for difficult ground conditions should be considered.**

This data is sourced from the British Geological Survey.

18.7 JPB mining areas

Records on site	0

Areas which could be affected by former coal and other mining. This data includes some mine plans unavailable to the Coal Authority.

This data is sourced from Johnson Poole and Bloomer.

18.8 The Coal Authority non-coal mining

Records within 500m	0

This data provides an indication of the potential zone of influence of recorded underground non-coal mining workings. Any and all analysis and interpretation of Coal Authority Data in this report is made by Groundsure, and is in no way supported, endorsed or authorised by the Coal Authority. The use of the data is restricted to the terms and provisions contained in this report. Data reproduced in this report may be the copyright of the Coal Authority and permission should be sought from Groundsure prior to any re-use.

This data is sourced from The Coal Authority.

18.9 Researched mining

Records within 500m	10

This data indicates areas of potential mining identified from alternative or archival sources, including; BGS Geological paper maps, Lidar data, aerial photographs (from World War II onwards), archaeological data services, websites, Tithe maps, and various text/plans from collected books and reports. Some of this data is approximate and Groundsure have interpreted the resultant risk area and, where possible, specific areas of risk have been captured.

18.10 Mining record office plans

Records within 500m	**0**

This dataset is representative of Mining Record Office and/or plan extents held by Groundsure and should be considered approximate. Where possible, plans have been located and any specific areas of risk they depict have been captured.

This data is sourced from Groundsure.

18.11 BGS mine plans

Records within 500m	**17**

This dataset is representative of BGS mine plans held by Groundsure and should be considered approximate. Where possible, plans have been located and any specific areas of risk they depict have been captured.

18.12 Coal mining

Records on site	**0**

Areas which could be affected by past, current or future coal mining.

This data is sourced from the Coal Authority.

18.13 Brine areas

Records on site	**0**

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.14 Gypsum areas

Records on site	**0**

Generalised areas that may be affected by gypsum extraction.

This data is sourced from British Gypsum.

18.15 Tin mining

Records on site	0

Generalised areas that may be affected by historical tin mining.

This data is sourced from Groundsure.

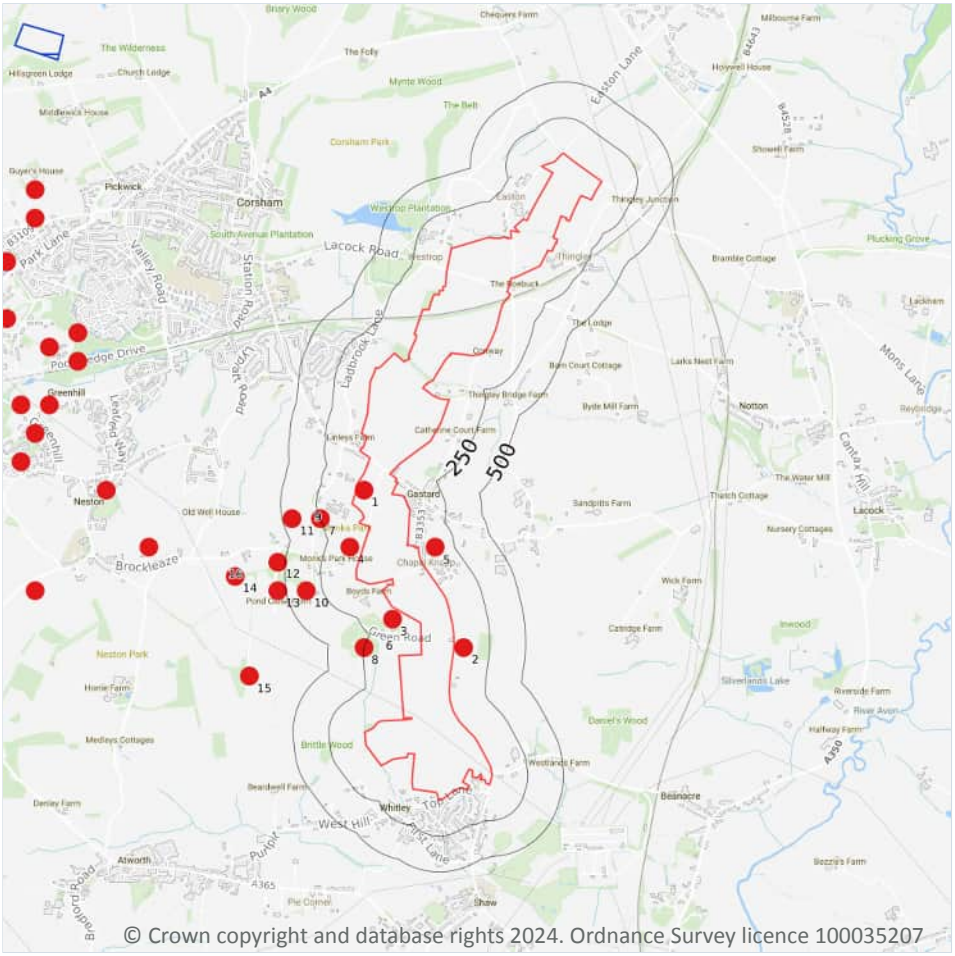

18.16 Clay mining

Records on site	0

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Ground cavities and sinkholes

- Site Outline

Search buffers in metres (m)

- Natural cavities (Area)
- Natural cavities (Point)
- Mining cavities
- Reported recent incidents
- Historical incidents
- BGS karst database (Point)
- BGS karst database (Line)
- BGS karst database (Area)

19.1 Natural cavities

Records within 500m	0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Stantec UK Ltd.

19.2 Mining cavities

Records within 1000m	16

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

Features are displayed on the Ground cavities and sinkholes map on **page 180 >**

19.3 Reported recent incidents

Records within 500m	0

This data identifies sinkhole information gathered from media reports and Groundsure's own records. This data goes back to 2014 and includes relative accuracy ratings for each event and links to the original data sources. The data is updated on a regular basis and should not be considered a comprehensive catalogue of all sinkhole events. The absence of data in this database does not mean a sinkhole definitely has not occurred during this time.

This data is sourced from Groundsure.

19.4 Historical incidents

Records within 500m	0

This dataset comprises an extract of 1:10,560, 1:10,000, 1:2,500 and 1:1,250 scale historical Ordnance Survey maps held by Groundsure, dating back to the 1840s. It shows shakeholes, deneholes and other 'holes' as noted on these maps. Dene holes are medieval chalk extraction pits, usually comprising a narrow shaft with a number of chambers at the base of the shaft. Shakeholes are an alternative name for suffusion sinkholes, most commonly found in the limestone landscapes of North Yorkshire but also extensively noted around the Brecon Beacons National Park.

Not all 'holes' noted on Ordnance Survey mapping will necessarily be present within this dataset.

This data is sourced from Groundsure.

19.5 National karst database

Records within 500m	0

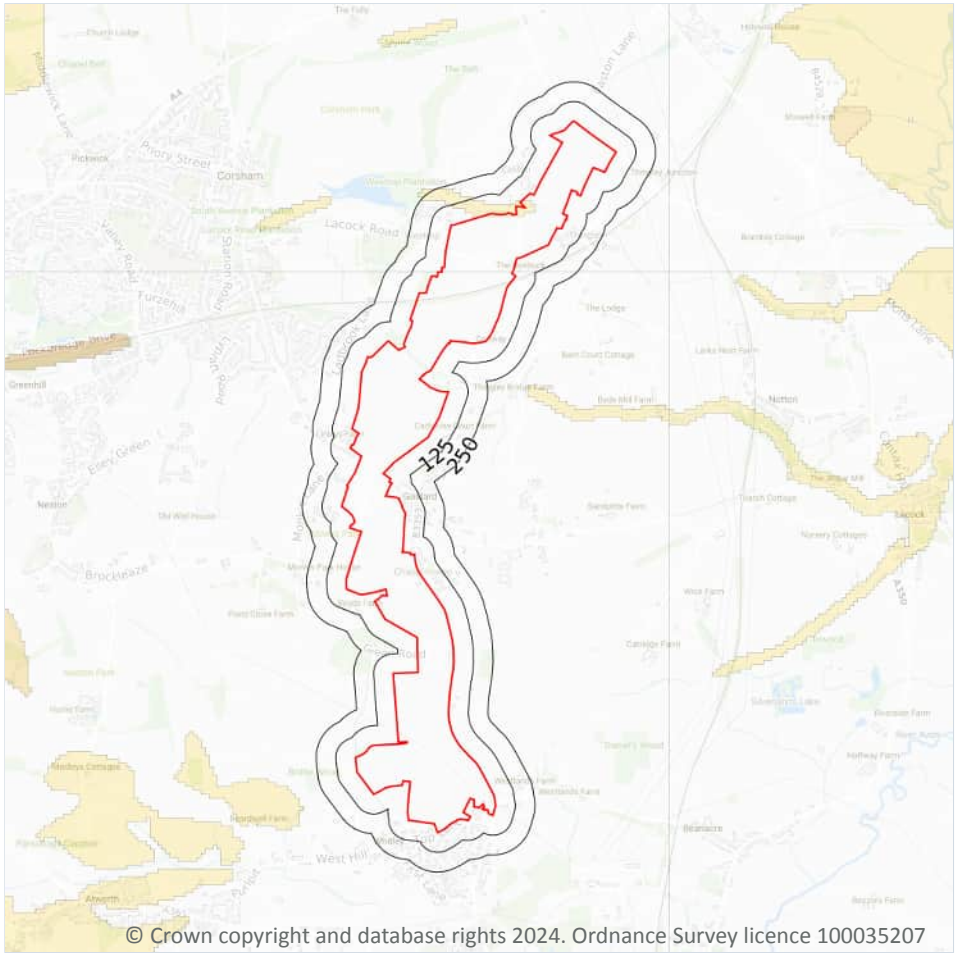

This is a comprehensive database of national karst information gathered from a wide range of sources. BGS have collected data on five main types of karst feature: Sinkholes, stream links, caves, springs, and incidences of associated damage to buildings, roads, bridges and other engineered works.

Since the database was set up in 2002 data covering most of the evaporite karst areas of the UK have now been added, along with data covering about 60% of the Chalk, and 35% of the Carboniferous Limestone outcrops. Many of the classic upland karst areas have yet to be included. Recorded so far are: Over 800 caves, 1300 stream sinks, 5600 springs, 10,000 sinkholes.

The database is not yet complete, and not all records have been verified. The absence of data does not mean that karst features are not present at a site. A reliability rating is included with each record.

This data is sourced from the British Geological Survey.

20 Radon

Site Outline

Search buffers in metres (m)

Between 5% and 10%

Between 3% and 5%

Between 1% and 3%

Less than 1%

20.1 Radon

Records on site	2

The Radon Potential data classifies areas based on their likelihood of a property having a radon level at or above the Action Level in Great Britain. The dataset is intended for use at 1:50,000 scale and was derived from both geological assessments and indoor radon measurements (more than 560,000 records). A minimum 50m buffer should be considered when searching the maps, as the smallest detectable feature at this scale is 50m. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain (1:100,000 scale).

Features are displayed on the Radon map on **page 184 >**

Location	Estimated properties affected	Radon Protection Measures required
On site	**Between 1% and 3%**	**None**

Location	Estimated properties affected	Radon Protection Measures required
On site	**Less than 1%**	**None**

This data is sourced from the British Geological Survey and UK Health Security Agency.

21 Soil chemistry

21.1 BGS Estimated Background Soil Chemistry

Records within 50m	70

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km^2. In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km^2; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

21.2 BGS Estimated Urban Soil Chemistry

Records within 50m	0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km^2).

This data is sourced from the British Geological Survey.

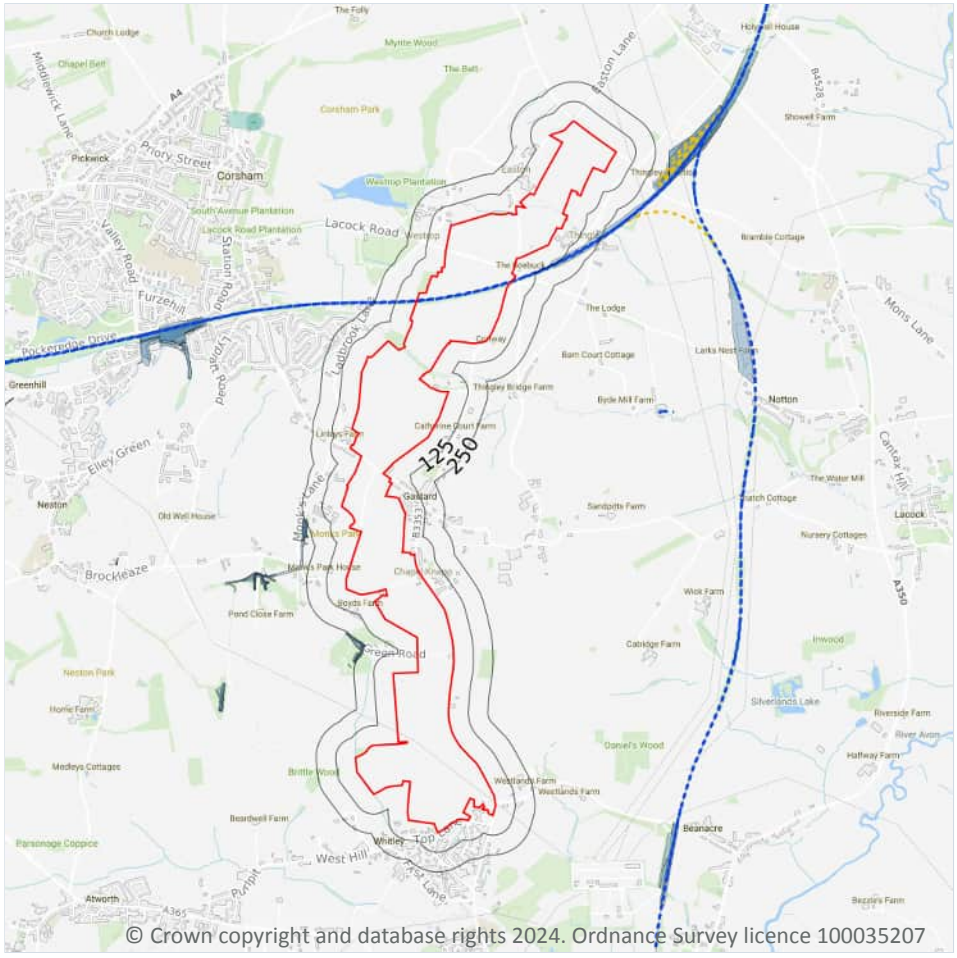

21.3 BGS Measured Urban Soil Chemistry

Records within 50m	0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km^2.

This data is sourced from the British Geological Survey.

22 Railway infrastructure and projects

© Crown copyright and database rights 2024. Ordnance Survey licence 100035207

22.1 Underground railways (London)

Records within 250m	0

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

22.2 Underground railways (Non-London)

Records within 250m	0

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

22.3 Railway tunnels

Records within 250m	0

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

22.4 Historical railway and tunnel features

Records within 250m	14

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

Features are displayed on the Railway infrastructure and projects map on **page 191 >**

Location	Land Use	Year of mapping	Mapping scale
104m NE	Railway Sidings	1955	10560
208m SW	Tramway Sidings	1921	2500
209m SW	Tramway Sidings	1899	10560

224m SW	Railway Sidings	1973	2500
235m W	Tramway Sidings	1899	10560
235m W	Railway Sidings	1923	10560
239m W	Tramway Sidings	1900	2500
250m W	Tramway Sidings	1923	10560

This data is sourced from Ordnance Survey/Groundsure.

22.5 Royal Mail tunnels

Records within 250m	0

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

22.6 Historical railways

Records within 250m	0

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

This data is sourced from OpenStreetMap.

22.7 Railways

Records within 250m	5

Currently existing railway lines, including standard railways, narrow gauge, funicular, trams and light railways.

Features are displayed on the Railway infrastructure and projects map on **page 191 >**

Location	Name	Type
On site	**Great Western Main Line**	**rail**
On site	**Great Western Main Line**	**rail**
On site	**Not given**	**Multi Track**
24m N	Not given	Multi Track
206m NE	Not given	Multi Track

This data is sourced from Ordnance Survey and OpenStreetMap.

22.8 Crossrail 1

Records within 500m	0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

22.9 Crossrail 2

Records within 500m	0

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

This data is sourced from publicly available information by Groundsure.

22.10 HS2

Records within 500m	0

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 ltd.
