I have received your letter regarding a solar farm on my now “grandson’s” land.

I vehemently oppose putting solar panels on best agricultural land.

You are putting over two thousand acres of very best agricultural land down to solar panels knowing we are heading towards severe food shortage. This is happening all over our country!! There are many more places to put solar panels. Factory roofs, waste land. All you need is just someone with common sense, which is lacking!! I am furious!!

I would like a sensible response (if you can find someone to send it!!!)
