

I am astounded that this area is even being considered for a solar farm given the state of the local roads. Whilst the A16 from Crowland to Spalding has been improved, no other road has and are in appalling condition.

The road to Gedney Hill B1166 Hull Drove is and has been for many years in awful condition and dangerous with many accidents.

I notice that the B1040 Nene Terrace Road will be used during construction - this road is so bad that the speed limit has been reduced to 40mph.

The main A16 Crowland to Peterborough is currently breaking up and potholes are appearing in many locations.

The traffic on the A16 Peterborough - Spalding is so busy that during rush hour is at a snails pace every day - my daughter commutes on this road daily and is delayed constantly. If the plans to build an extra 2000 properties near Newborough go ahead then this will affect the road again.

There are regular accidents, almost weekly on the A16, serious and sometimes fatal leaving the road being closed and cars having to travel on the old A1073. This road is now dangerous. The speed limit has been reduced to 40mph and the dips and bumps are terrible.

The old A1073 road to Spalding has been closed for over 1 year as the road has deteriorated to such a level that it is dangerous and the council does not have the money to repair and re-open.

Every road in this area is appalling. Every road is dangerous. I feel that with the extra lorries/traffic this will exacerbate the problem immensely.
