

I can not believe how complicated you have made this process to object to this.

The FLOODS in Lavendon have been horrendous recently and there are many videos showing these.

These solar panels which are huge will only add to this as the water will collect on the panels and drop at the base making flooding even worse.

I have walked these fields in Lavendon for the last 50 years and I am so upset that our wonderful COUNTRYSIDE is going to be RUINED. Our country side should be used for proper farming of food, not for solar farming. We are giving our future generations major headaches.

I am also worried about the battery storage facilities at Grendon too. Surely this are going to be a fire risk, especially with our hot dry summers that we are now getting.

ALL NEW HOUSES SHOULD BE MADE TO HAVE THEM ON THEM AND SO SHOULD ALL EXISTING SHOPS AND WAREHOUSES.

Other countries have them on fences along roads along with turbines too.

I am not against solar energy but really think that devastating our countryside and causing more problems in a bad flooding area such as lavendon is not the right way to go about it.

The wildlife habitats will be ruined.

I travel to Wellingborough on a regular basis, the nene valley solar farm is huge but a fraction of your solar farm.

MENTAL HEALTH problems in our country are massive, being out in the fresh air enjoying the countryside is better medicine for you than anything. And you want to take all this away. No one will want to go for a walk to look at huge sheets of blackness.

I hope that you take my comments as a very strong objector to this project. And I hope you can put your solar panels on buildings like the Sainsburys in Olney. It has enough solar panels on the top of there to power 60 houses. That's just 1 building. Please please rethink your plans
