

In addition to my previous comments regarding flooding in Lavendon, there are many images and videos available of the disastrous flooding experienced by Lavendon Residents in the last few years. The risk of future flooding of this type will without doubt be increased by the development of this solar farm for the reasons I previously noted. I would also like to re-iterate the effects it will have on a well used community amenity, enjoyed by many local walkers, runners, cyclists, horse riders and animal/bird watchers. It will ruin our beautiful views and badly affect our local trees and wildlife with nearby areas of ancient woodland. It will also be built on an area of local history including a WW2 bombing range and nearby crash sites.
