Note:

1. Both augmented Zones of Theoretical Visibility (ZTV) have been generated using the Environment Agency's 2m DTM (2022), as well as Ordnance Survey's Open Buildings dataset and the Forestry Commission's National Forest Inventory (NFI) dataset. The resulting ZTV demonstrates where the development may be visible from considering existing screening elements such as buildings (modelled at 8m high), as well as trees from the NFI dataset (modelled at 12m high). For the Green Hill Solar Farm ZTV, additional screening effects resulting from the proposed development are also accounted for.

2. The Green Hill Solar Farm ZTV was produced to indicate theoretical visibility as a worst case, with an assumption that the proposed development would fill the full extent of the development area at a maximum solar panel height of 4.5m, a BESS height of 3.5m and a substation height of 6.8m at Green Hill A, B, E, F and G and 12.5m at Green Hill C and BESS, with an observer height of 1.7m.

3. The Grendon Lakes BESS ZTV was produced to indicate theoretical visibility as a worst case, with an assumption that the proposed development would fill the full extent of the RLB, excluding the access track, a maximum height of 3.9m, with an observer height of 1.7m.
