Subject: Fw: EN010170 Green Hill Solar Farm. Reg no. F6F9F7520

You don't often get email from [REDACTED]

Too Whom It May Concern

Further to my previous email. The huge upheaval of removing and returning the top soil proposed in the developers Soil Management Plan will not only cause the destruction of a larger amount of organic matter but also result in the release of large amounts of carbon into the atmosphere. This, in addition to the extra emissions resulting from increased food imports to replace the production lost by the area of the solar farm along with the encouragement for China to continue creating coal fired power stations if the developers purchase Chinese solar panels, means that the proposed solar farm will have significant detrimental side effects on climate change undermining its potential benefits.

Kind regards

Richard Callis
