Appendix I

Geophysical Surveys

Appendix I Contents

- I.1 Wireline Geophysics
 - I.1.1 Guidance Notes on Wireline Geophysics
 - I.1.2 Equipment Datasheets
 - I.1.3 Wireline Geophysical Results

I.1 Wireline Geophysics

I.1.1 Guidance Notes on Wireline Geophysics

I.1.1.1 Data Processing

All data was processed in WellCAD 5.4 software. This section summarizes the data processing steps applied for the different logging methods.

P- & S-Wave Suspension Logger Data:

- Frequency filtering data if necessary;
- Manual picking of P-wave arrival on near and far receiver wavetrain;
- Manual picking of S-Wave arrivals on near and far receiver wavetrain;
- Velocity calculation, data reduction, averaging for each depth point;
- Consistency check, Quality Control;
- Estimation of Poisson`s Ratio;
- Data visualisation (log and velocity table).

3 Arm Caliper Data:

- Interpolation of bad data values if necessary;
- Depth correction and merging of separately measured sections;
- Check for consistency with imager data;
- Data visualisation (log).

I.1.1.2 Data Presentation

PS Logger velocities were derived from the arrival times of the P and S channels. Velocities are presented together with calculated Poisson`s Ratio on a 1:100 depth scale plot.

I.1.2 Equipment Datasheets

EMERGENCY

HEALTH HAZARDS

Hazard statement(s):

Extremely flammable aerosol. Pressurized container: may burst if heated.

Harmful if swallowed.

Causes skin irritation.

Causes serious eye irritation.

May cause drowsiness or dizziness.

Toxic to aquatic life with long lasting effects.

Suspected of damaging fertility. Suspected of damaging the unborn child.

Risk of explosion if heated under confinement.

May form explosive peroxides.

For making the best use of the controls, please follow the checklist below

- Make sure the room is well ventilated, and any extraction or air supply is switched on and working.

Precautionary statement(s): Prevention

Obtain special instructions before use.

Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.

Do not spray on an open flame or other ignition source.

Do not pierce or burn, even after use.

Use only outdoors or in a well-ventilated area.

Wear protective gloves, protective clothing, eye protection and face protection.

Avoid breathing mist/vapours/spray.

Wash all exposed external body areas thoroughly after handling.

Do not eat, drink or smoke when using this product.

Avoid release to the environment.

Precautionary statement(s): Response

IF exposed or concerned: Get medical advice/ attention.

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

If eye irritation persists: Get medical advice/attention.

Collect spillage.

IF SWALLOWED: Call a POISON CENTER/doctor /physician/first aider if you feel unwell.

IF ON SKIN: Wash with plenty of water.

IF INHALED: Remove person to fresh air and keep comfortable for breathing.

Rinse mouth.

If skin irritation occurs: Get medical advice/attention.

Take off contaminated clothing and wash it before reuse.

EMERGENCY

HEALTH HAZARD INFORMATION
Signal word: Danger
Hazard statement(s):
H222+H229 Extremely flammable aerosol. Pressurized container: may burst if heated.
H302 Harmful if swallowed.
H315 Causes skin irritation.
H319 Causes serious eye irritation.
H336 May cause drowsiness or dizziness.
H411 Toxic to aquatic life with long lasting effects.
H361fd Suspected of damaging fertility. Suspected of damaging the unborn child.

FIRST AID
Swallowed: Contact Doctor or Poisons Centre. Do NOT give milk or oil. Do NOT give alcohol.
Skin: Wash with soap & water. Apply cleansing cream.
Advice To Doctor: NO adrenalin. Evaluate for respiratory distress. Consider lavage with cuffed tube. NO adrenalin. Severe exposure indicated by respiratory distress/hypotension Managements is essentially supportive.
Fire Fighting: Keep containers cool. Foam.
Spills and Disposal: Eliminate ignition sources. Control vapour with water spray/ fog. Absorb with dry agent. Stop leak if safe to do so. Use only in well ventilated areas. Take precautionary measures against static discharges. Dispose of this material and its container at hazardous or special waste collection point. This material and its container must be disposed of in a safe way. To clean the floor and all objects contaminated by this material, use water and detergent.

PRECAUTIONS FOR USE
Glasses: Consider chemical goggles.
Gloves: 1.NEOPRENE 2.NITRILE 3.PVC
Respirator: Type AX Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)
Storage and Transportation: Store in cool, dry, protected area. Use only in well ventilated areas. Take precautionary measures against static discharges. Dispose of this material and its container at hazardous or special waste collection point. Keep out of reach of children. Keep container in a well ventilated place. Keep away from food, drink and animal feeding stuffs. Keep away from heat. Keep away from sources of ignition. No smoking. Handle and open container with care.
Fire/Explosion Hazard: HIGHLY FLAMMABLE. Vapours/gas heavier than air. Toxic smoke/fumes in a fire. Risk of explosion if heated under confinement. Use only in well ventilated areas. Take precautionary measures against static discharges. Dispose of this material and its container at hazardous or special waste collection point. In case of fire and/or explosion, DO NOT BREATHE FUMES.

SAFE STORAGE WITH OTHER CLASSIFIED CHEMICALS
+ X + X + + +
X — Must not be stored together 0 — May be stored together with specific preventions + — May be stored together
<i>Note: Depending on other risk factors, compatibility assessment based on the table above may not be relevant to storage situations, particularly where large volumes of dangerous goods are stored and handled. Reference should be made to the Safety Data Sheets for each substance or article and risks assessed accordingly.</i>

J.1.1 Guidance Notes on Ground Gas and Groundwater Monitoring and Sampling

J.1.1.1 Standard Protocols

The following sections sets out the in-house procedures for monitoring and sampling ground gas and ground waters from monitoring installations. Any deviations from these procedures (Client specified procedures) or additional steps are set out in the report text or on the monitoring data sheets. Results and details of equipment used are presented on the relevant datasheets in the appropriate appendix for field test results. Unless detailed below, equipment is calibrated at regular intervals as specified by the manufacturer and calibration certificates can be supplied on request. Instrument limits of detection and reading accuracy are presented in the attached table and the readings presented on the data sheets should be read in conjunction with this information.

J.1.1.2 Gas Monitoring

In situ measurements of gas concentrations, gas emission flow-rate and in situ differential pressure in the standpipes are made, when gas monitoring is required, using the industry standard GA5000 or equivalent. The installations are fitted with a gas tap, which is closed between monitoring visits. Concentrations of carbon dioxide (CO₂), oxygen (O₂), carbon monoxide (CO), hydrogen sulphide (H₂S) and methane (CH₄) are measured as standard. Concentrations of volatile gases (VOC) can be measured, when required, using a photoionisation detector, calibrated on site against a standard reference gas (100 ppm iso-butylene in air).

Any gas monitoring is undertaken prior to any groundwater monitoring.

In line with CIRIA guidance, CH₄, CO₂ and O₂ gas concentrations are provided as both steady state and peak values to allow detailed interpretation of ground gas conditions. Steady state values are derived from readings at a frequency of 20 seconds over a period of 10 minutes, or a period of 3 minutes where steady state is reached within that time period. Otherwise, frequency of readings is as specified. Peak readings during the monitoring period, as well as time taken to reach steady state, are presented on the same data sheet.

Gas monitoring by recirculation may be required by the Specification. The gas standpipes for recirculation monitoring consist of a twin gas tap assembly with a suspended tube extending to approximately 1 m above the water level. Initially the differential pressure is recorded. Each gas tap is then monitored for in situ gas concentrations using the GA5000 and readings taken after 5 seconds, 30 seconds and 60 seconds. Gas recirculation is then undertaken using the inlet tube from the GA5000, which is attached to the top tap, whilst the outlet tube is attached to the tap with the suspended tube. Gas readings are taken at 1 minute intervals for 10 minutes or until 3 consecutive readings are within 10 % of each other. Finally, each gas tap is again monitored individually (5s, 30s and 60 seconds). Finally, the gas flow is measured for 10 minutes, or until gas flow is exhausted.

The groundwater level in the gas standpipes is measured following all forms of soil gas concentration monitoring. The recorded groundwater levels are given on the same summary tables as the gas monitoring results.

After monitoring the gas tap assembly is replaced, with valves in the closed position.

J.1.1.3 Gas Sampling

Samples of soil gas, if required, are collected from the gas standpipes immediately following the measurement of soil gas concentrations. The soil gas samples are collected using Tedlar gas sample bags which are filled by pumping gas from the standpipe using the pump function of the GA5000 gas analyser and the outlet tube. Tedlar bag valves are fully closed and sealed prior to detachment from the GA5000.

Alternatively, gas canisters may be used, such as Silonite™ or Summa. These are evacuated canisters, pre-prepared by the laboratory, so do not require a sampling pump for sample collection. These are also preferable for more extensive analysis such as low-level VOC analysis.

Following collection, gas samples are dispatched to a suitable analytical laboratory the same day.

J.1.1.4 Water Monitoring

Water levels were recorded in monitoring installations during and after fieldworks, as specified, using a dipmeter for single readings or datalogger for continuous monitoring.

J.1.1.5 Water Sampling

Monitoring wells are purged prior to water sampling, where required, by the removal of three well volumes of groundwater. A well volume is calculated from the height of the column of water in the standpipe (or for a sealed installation the thickness of the saturated zone surrounding the installation), the borehole diameter and the pipe diameter, taking account of the porosity of the gravel pack:

$$V = \pi \left(\frac{r_a}{1000} \right)^2 (h_3 - h_1) + \left[\pi \left(\frac{r_b}{1000} \right)^2 (h_3 - h_2) - \pi \left(\frac{r_a}{1000} \right)^2 (h_3 - h_2) \right] \phi 1000$$

Equation J.1

Where:

- h_1 = the depth to water in standpipe
- h_2 = the depth to top of water in response zone
- h_3 = the depth to base of standpipe
- r_a = the radius of pipe [mm]
- r_b = the radius of borehole [mm]
- ϕ = the porosity of pack (0.25)
- V = one well volume in litres

Purging is undertaken using a 12V peristaltic pump, an air-line compressor lift system or an inertial pumping system such as Waterra. The intake of the pump should ideally be placed within the screened section of the install.

Unless specified, groundwater samples are collected immediately after purging using the same pumping system as used for purging. Pre-purge and purged water samples can be collected on request.

Field measurements of pH, Electrical Conductivity (EC), Total Dissolved Solids (TDS), Dissolved Oxygen (DO), Reduction-Oxidation (Redox) Potential and Temperature are made after purging each well volume, if required, and/or during sampling. All measurements are made with a multiparameter water quality probe and a flow cell system, attached to a suitable water pump, to reduce the disturbance of the sample and ensure the liquid is not exposed to air. Where purging is not undertaken, or where insufficient groundwater is present to allow for a full three well volumes of water to be purged, field measurements can be taken directly by submerging probes into a subsample of the disturbed sample. Instruments are calibrated prior to each use or each day, whichever is the lesser, against standard reference solutions.

Equipment is either cleaned thoroughly between uses in different boreholes or is dedicated to an individual standpipe to avoid cross-contamination.

As an alternative to purging three well volumes, low flow purging (micro purging) may be carried out, using the measurement of in situ parameters to establish when groundwater stability has occurred prior to taking the sample. Low flow sampling equipment includes bladder pumps, low flow inertial tubing or, if the water level is shallow, a peristaltic pumps. Details are included on the water sampling data sheets.

Sample handling (on-site filtration and preservation if required), storage and transportation arrangements are also detailed on the water sampling data sheets. In general, samples will be packed in insulated boxes, with frozen cold packs, and transported to the designated analytical laboratory in a timely manner.

Water sampling and purging often results in quantities of purged ground water which is initially held in plastic containers during the purging period. If the liquid is suspected to be heavily contaminated (based on smell and visual appearance) it will be stored in suitable intermediate containers on site whilst contamination categorisation is undertaken. Should a hazardous level of contamination be identified, a licensed disposal contractor will be employed to dispose of the wastewater according to current legislation at the Client's expense. All purged groundwater is disposed in accordance with the Site Waste Management Plan.

Where free product (LNAPL / DNAPL) is suspected or identified in groundwater monitoring wells, an interface probe is used to identify the depth and depth range of product. Where requested prior to monitoring, a sample of LNAPL product can be collected using a

hydrocarbon bailer which floats in water and sinks in light oil leaving a product sample within the bailer that also aids accurate identification of product depth.

J.1.1.6 Environmental Monitoring and testing equipment

The following instruments may be used during the site monitoring, as detailed in Table J.1.

Details of equipment used, and serial numbers (if applicable), are included on the relevant sampling data sheets.

Table J.1: Environmental Monitoring and Testing Equipment

Instrument	Parameter	Range	Accuracy

	Oxygen	0 to 25 %	± 1.0 %
Hydrogen Sulphide	0 to 1000 ppm sensor	± 2.0 % FS	
Infra-red Gas Analyser GA2000 Geotechnical Instruments	Methane	0 to 5 % (LEL)	± 0.5 %
		5 to 15% (UEL)	± 1.0 %
		>15%	± 3.0 %
	Carbon Dioxide	0 to 5 %	± 0.5 %
		5 to 15%	± 1.0 %
>15%	± 3.0 %		
Oxygen	0 to 5 %	± 1.0 %	
5 to 15%	± 1.0 %		
15 to 25%	± 1.0 %		
Hydrogen Sulphide	0 to 200 ppm	± 10 %	
Carbon Monoxide	0 to 500 ppm	± 10 %	
Photoionization Detector PhoCheck Tiger (Intrinsically Safe)	Volatile organic compounds	0 to 20 000 ppm	±5% ± one digit
Photoionization Detector MiniRAE 3000 (Intrinsically Safe)	Volatile organic compounds	0 to 999.9 ppm 1000 to 15,000 ppm	Resolution: 0.1 ppm 1 ppm
Groundwater Inertial Pump (Waterra)	Development and purging of wells	5 to 25 L/min, depending on ground conditions	Not Applicable
Electronic Dipmeter	Water & Leachate Levels	Dependant on tape length	± 10 mm operator reading off tape
Oil/Water Interface Meter	Depths/thickness of floating (LNAPL) & sinking (DNAPL) product	Dependant on tape length	± 1 mm operator reading off tape

Instrument	Parameter	Range	Accuracy
YSI professional plus	pH	0 to 14	± 0.2 units
	Electrical Conductivity	0 to 200 mS/cm	±0.5% of reading or 0.001 mS/cm, whichever is greater
	Total Dissolved Solids	0 to 100 g/L	0.001 g/l
	Dissolved Oxygen (%)	0 to 200%	± 2% of reading or 2% air saturation, whichever is greater
		200 – 500%	± 6% of reading
	Redox//ORP (mV)	-1999 to +1999 mV	±20 mV in redox standards
Temperature	-5 to 70°C	± 0.1° C	

J.2 Record of Water Levels in Monitoring Installations

Title	Reference
Record of Water Levels in Monitoring Installations	Referenced by Location ID

Water Level Readings

Project Name		Keadby 3 Low Carbon Gas Power	
Project Reference		F212561	
Location ID		CP+RC	MS-BH01
Monitoring Point Reference		01	Pipe Type
Tip Depth [m]		10.00	Pipe Size [mm]
Datum		Cover Level	Datum to GL [m]
Response Zone Top [m]		7.00	Gas Tap
Response Zone Base [m]		10.00	Headworks
			Installation Date

Steady State Gas Monitoring Record

Monitoring Round	3	
Date/Time	Tuesday 2022-11-29	11:00
Weather	Overcast, damp.	

Steady State refers to the stabilisation of the readings and the become within 0.1% variation.
 If results do not stabilise record final result as NSS (no steady state).

INSTRUMENT	
Type	GA5000
Serial Number	G501909
PID Serial Number	NA

Steady State Gas Monitoring Record

Monitoring Round	3	
Date/Time	Tuesday 2022-11-29	10:06
Weather	Overcast, damp.	

Steady State refers to the stabilisation of the readings and the become within 0.1% variation.
 If results do not stabilise record final result as NSS (no steady state).

INSTRUMENT	
Type	GA5000
Serial Number	G501909
PID Serial Number	NA

Steady State Gas Monitoring Record

Monitoring Round	1	
Date/Time	Tuesday 2022-11-15	11:12
Weather	Rain, wet.	

Steady State refers to the stabilisation of the readings and the become within 0.1% variation.
If results do not stabilise record final result as NSS (no steady state).

INSTRUMENT	
Type	GA5000
Serial Number	G501909
PID Serial Number	na

MONITORING POINT	
Monitoring Point Reference	01
Tip Depth [m]	0.00

Steady State Gas Monitoring Record

Monitoring Round	5	
Date/Time	Friday 2022-12-16	09:41
Weather	Sunny, frozen.	

Steady State refers to the stabilisation of the readings and the become within 0.1% variation.
 If results do not stabilise record final result as NSS (no steady state).

INSTRUMENT	
Type	GA5000
Serial Number	G501909
PID Serial Number	NA

Steady State Gas Monitoring Record

Monitoring Round	3
Date/Time	Thursday 2022-12-01 14:08
Weather	Overcast, damp.

Steady State refers to the stabilisation of the readings and the become within 0.1% variation.
If results do not stabilise record final result as NSS (no steady state).

K.1 Guidance Notes

Title	Reference
General Notes on Laboratory Test ResultsU100 Driven Open Tube Samples	K.1.1
cc. Test Methods	K.1.1.1
dd. Abbreviations on Results Sheets	K.1.1.2
ee. Sample Descriptions	K.1.1.3
ff. Interpretation of Test Results	K.1.1.4
gg. U100 Driven Open Tube Samples	K.1.1.5

K.1.1 General Notes on Laboratory Test Results

K.1.1.1 Test Methods

The tests reported on the following sheets have been carried out in accordance with the methods given in BS 1377:1990 or BS EN ISO17892:2014-2018 subject to minor variances as described below. These guidance notes also describe notation used in reporting the FGSL laboratory tests.

K.1.1.2 Abbreviations on Results Sheets

Table K.1: Sample Types

Sample Types	Description
D	Small disturbed sample
B	Bulk disturbed sample
LB	Large bulk disturbed sample
U/UT	General purpose open drive tube sample
P	Piston sample
C	Rotary core sample

K.1.1.3 Sample Descriptions

The sample descriptions shown on the test report sheets are the technician's visual descriptions of the test samples, in accordance with Clause 9.1 of Part 1 of BS 1377:1990 and do not necessarily comply with the requirements of BS 5930:2015 or BS EN ISO 14688-1:2018. For a more comprehensive description of the soil samples to these standards, reference should be made to the exploratory location records.

K.1.1.4 Interpretation of Test Results

Laboratory test results in this report give the soil properties of individual specimens tested under specified conditions. Individual results or groups of results may not be appropriate for use as design parameters for some geotechnical analyses. The samples may be non-representative, disturbed internally, or prepared and tested under conditions suited for different geotechnical applications. Unless the selection of design parameters is discussed in this report, it is recommended that the advice of an appropriately qualified and experienced specialist is sought.

K.1.1.5 U100 Driven Open Tube Samples

It should be noted that the sampling method using standard U100 (thick walled) samplers may give Class 2 samples, i.e. for use for laboratory classification, moisture content and density testing, but more generally Class 3. The sampling procedure using thin wall samples can achieve Class 1 samples (suitable for strength, deformation and consolidation testing as well as Class 2 type testing) in non-sensitive fine cohesive soils of stiff or lower consistency. In brittle or closely fissured materials such as hard clays, the lower sampling class is more

frequently achieved, i.e. for use for laboratory classification and moisture content testing. UT samples are thin wall (OS-T/W) samples and so may provide Class 1 samples.

Building Research Establishment (BRE) Special Digest 1 testing may be carried out on disturbed samples. Fugro may have been instructed to treat the samples in a similar manner to environmental samples. If that is the case, see sample handling in Appendix L.

Accredited to
ISO/IEC 17025:2017

Schedule of Accreditation
issued by
United Kingdom Accreditation Service
2 Pine Trees, Chertsey Lane, Staines-upon-Thames, TW18 3HR, UK

MATtest Limited
Issue No: 025 Issue date: 20 December 2022

Testing performed by the Organisation at the locations specified

Materials/Products tested	Type of test/Properties measured/Range of measurement	Standard specifications/ Equipment/Techniques used	Location Code
SITE TESTS			
CONCRETE - fresh	Sampling fresh concrete on site - composite sample - spot sample	BS EN 12350-1:2019	X
	Slump	BS EN 12350-2:2019	X
	Flow	BS EN 12350-5:2019	X
	Air content - pressure gauge method	BS EN 12350-7:2019	X
	Making cubic specimens for strength tests	BS EN 12390-2:2019	A X
SOILS for civil engineering purposes	In-situ California Bearing Ratio (CBR)	BS 1377-9:1990	X
END			

K.3 Geotechnical Laboratory Schedules

Title	Reference
Schedule of Geotechnical Laboratory Test Notices/Clarifications	K.3.1

K.3.1 Schedule of Geotechnical Laboratory Test Notices/Clarifications

Table K.2: Schedule of Geotechnical Laboratory Test Notices/Clarifications

Laboratory Abortive Test Notice Reference	Exploratory Location ID	Sample Top Depth [m BGL]	Sample Type	Sample Reference	Tests Scheduled	Restriction	Further Instruction
ATN 001	MS-BH05	19.42	C	4	UCS	Fractured sample. Insufficient intact material to obtain UCS specimen.	Undertake Point Load Test Axial and Diametric
ATN 002	BH104	15.70	D	35	AL	Insufficient material to perform test.	Use sample at 15.00mbgl
ATN 003	MS-BH15	18.44	C	5	UCS	Insufficient material. Length/diameter ratio <1:1.	Undertake point load test axial and diametric
ATN 004	MS-BH11	24.42	C	15	UCS	Insufficient material. Length/diameter ratio only 1.1:1.	Undertake Point load
ATN 005	DS106	0.10	B	3	PSD	Asbestos detected below.	Test Cancelled
ATN 006	DS106	0.40	B	6	PSD	Asbestos detected.	Test Cancelled
ATN 007	MS-BH25	0.20	B	6	PSD	Asbestos detected below.	Test Cancelled
ATN 008	MS-BH25	0.60	B	8	PSD	Asbestos detected.	Test Cancelled
ATN 009	BH106	15.20	D	49	AL	Insufficient material.	Test Cancelled
ATN 010	MS-BH27	3.20	UT	13	UUT	Insufficient material. Scheduled Oedometer to be performed.	Test Cancelled
ATN 011	MS-BH26	4.40	UT	16	UUT	Insufficient material. Scheduled Oedometer to be performed.	Test Cancelled
ATN 012	AR-BH01	22.47	C	44	UCS	Sample fractured. L/D < 1	Axial PLT

Laboratory Abortive Test Notice Reference	Exploratory Location ID	Sample Top Depth [m BGL]	Sample Type	Sample Reference	Tests Scheduled	Restriction	Further Instruction
ATN 013	MS-BH18	19.27	C	52	UCS	Sample fractured. L/D = 1	Axial and diametric PLT
ATN 014	MS-BH04	23.40	C	51	UCS	Sample fractured. L/D = 1.2	Axial and diametric PLT
ATN 015	MS-BH04	34.70	C	64	UCS	Sample fractured. L/D = 1	Axial PLT
ATN 016	MS-BH10	37.16	C	62	UCS	Sample fractured. L/D < 1	Axial and diametric PLT
ATN 017	MS-BH10	38.20	C	63	UCS	Sample fractured. L/D = 1.2	Axial and diametric PLT
ATN 018	MS-BH18	15.49	C	46	UCS	Unsuitable material. Clay.	UUT with cell pressure 310kPa
ATN 019	MS-BH24	24.39	C	15	UCS	Insufficient material. L/D = 1.5	Axial and Diametric PLT
ATN 020	BH106	1.20	B	7	PSD	Asbestos detected.	Test Cancelled
ATN 021	MS-BH13	38.54	C	24	UCS	Insufficient material. Length/diameter ratio only 1.1:1.	Axial and Diametric PLT
ATN 022	MS-BH21	23.77	C	14	UCS	Insufficient material. Length/diameter ratio only 1:1.	Axial and Diametric PLT
ATN 023	AR-BH02	0.3	B	6	Compaction Test (2.5 kg rammer)	Insufficient material to perform test.	Test Cancelled
ATN 024	BH103	2	B	12	Compaction Test (2.5 kg rammer);#Small Shear Strength by Direct Shear - 60 mm	Insufficient material to perform Compaction test. As no Compaction test will be performed we are unable to obtain recompacting data for Shearbox test.	Test Cancelled

Laboratory Abortive Test Notice Reference	Exploratory Location ID	Sample Top Depth [m BGL]	Sample Type	Sample Reference	Tests Scheduled	Restriction	Further Instruction
ATN 025	MS-BH13	3.8	B	17	Particle Size Distribution	Sample not received. Testing moved to B20 as instructed.	Test Cancelled
ATN 026	AR-BH02	0.7	B	9	California Bearing Ratio	Compaction and PSD performed on B9 and B11 combined but insufficient material for CBR test.	Test Cancelled
ATN 027	BH101	0.5	B	5	California Bearing Ratio	Insufficient material to perform test.	Test Cancelled
ATN 028	HR-BH01	0.7	B	6	California Bearing Ratio	Insufficient material to perform test.	Test Cancelled
<p>Notes BGL = Below ground level AL = Atterberg Limits PSD = Particle Size Distribution UUT = Unconsolidated Undrained Triaxial UCS = Uniaxial Compressive Strength PLT = Point Load Strength Index</p>

Specimen Description	Brown slightly silty SAND	Sample Type	D
Specimen Reference		Specimen Depth [m]	
		Sample Reference	31

Test Data	
Date of Test	17/11/2022
Oven Temperature [°C]	105.0
Water Content [%]	21.1

Issue Date	24/11/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	24/11/2022
Remarks:					

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

Determination of Liquid and Plastic Limits

1483

BS EN ISO 17892-12:2018 / BS EN ISO 17892-1:2014

Project Reference	F212561	Location ID	MS-BH12
Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	14.00
Specimen Description	Grey brown slightly gravelly slightly sandy silty CLAY	Sample Type	D
Specimen Reference		Specimen Depth [m]	
		Sample Reference	38

Test Parameters	
Method	Fall cone, 4 point. Increasing water content.
Fall Cone Used	80g/30° Cone
Preparation	Tested after >425µm removed by hand
Mandatory Reporting Items	
As Received Water Content [%]	21.5
Liquid Limit [%]	33
Plastic Limit [%]	21
Plasticity Index [%]	12
% Passing 425 µm BS Sieve [%]	71
Optional Reporting Items	
Liquidity Index	0.774
Consistency Index	0.226
Activity Index	
Water Content of Material <425 µm [%]	30.3

Terms used on Plasticity Chart based on BS EN ISO 14688-2 : 2018

Determination of Liquid and Plastic Limits

1483

BS EN ISO 17892-12:2018 / BS EN ISO 17892-1:2014

Project Reference	F212561	Location ID	MS-BH17
Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	2.80
Specimen Description	Brown slightly gravelly slightly sandy CLAY	Sample Type	D
Specimen Reference		Specimen Depth [m]	
		Sample Reference	13

Test Parameters	
Method	Fall cone, 4 point. Increasing water content.
Fall Cone Used	80g/30° Cone
Preparation	Tested after >425µm removed by hand
Mandatory Reporting Items	
As Received Water Content [%]	33.9
Liquid Limit [%]	28
Plastic Limit [%]	17
Plasticity Index [%]	11
% Passing 425 µm BS Sieve [%]	91
Optional Reporting Items	
Liquidity Index	1.853
Consistency Index	-0.853
Activity Index	
Water Content of Material <425 µm [%]	37.4

Terms used on Plasticity Chart based on BS EN ISO 14688-2 : 2018

Test Parameters	
Method	Fall cone, 4 point. Increasing water content.
Fall Cone Used	80g/30° Cone
Preparation	Tested in natural condition
Mandatory Reporting Items	
As Received Water Content [%]	22.8
Liquid Limit [%]	
Plastic Limit [%]	NP
Plasticity Index [%]	
% Passing 425 µm BS Sieve [%]	100
Optional Reporting Items	
Liquidity Index	
Consistency Index	
Activity Index	
Water Content of Material <425 µm [%]	22.8

Terms used on Plasticity Chart based on BS EN ISO 14688-2 : 2018

CIL = Low Plasticity Clay CIM = Medium Plasticity Clay CIH = High Plasticity Clay CIV = Very High Plasticity Clay
 SiL = Low Plasticity Silt SiM = Medium Plasticity Silt SiH = High Plasticity Silt SiV = Very High Plasticity Silt

Issue Date	11/12/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	10/12/2022
Remarks:	Four point liquid limit test.				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

0.300	41		
0.212	37		
0.150	34		
0.0630	33		

Dry Mass of Sample [g]	5725
Particle Density [Mg/m ³]	2.70 assumed

Sample Proportions	Dry Mass [%]
Very coarse	4.8
Gravel	39.3
Sand	22.9
Silt	17.8
Clay	15.2

Grading Analysis	
D100 [mm]	75
D60 [mm]	7.9
D30 [mm]	0.0179
D10 [mm]	-
Coefficient of Uniformity	Not applicable
Coefficient of Curvature	Not applicable

Issue Date	10/12/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	02/12/2022
Remarks:	Insufficient material to comply with the recommended minimum mass.				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

Certificate of Analysis

Certificate Number 22-21090

Issued: 24-Oct-22

Client Fugro GeoServices Limited
Unit 43
Number One Industrial Estate
Medomsley Road
Consett
DH8 6TW

Our Reference 22-21090

Client Reference F212561

Order No 386/122836/SB

Contract Title Keadby 3 Low Carbon Gas

Description 3 Soil samples.

Date Received 19-Oct-22

Date Started 19-Oct-22

Date Completed 24-Oct-22

Test Procedures Identified by prefix DETSn (details on request).

Notes Opinions and interpretations are outside the laboratory's scope of ISO 17025 accreditation. This certificate is issued in accordance with the accreditation requirements of the United Kingdom Accreditation Service. The results reported herein relate only to the material supplied to the laboratory. This certificate shall not be reproduced except in full, without the prior written approval of the laboratory.

Containers Received & Deviating Samples

Lab No	Sample ID	Date Sampled	Containers Received	Holding time exceeded for tests	Inappropriate container for tests
2073853	MS-BH01 3.00 SOIL		PT 500ml	Sample date not supplied, Organic Matter (Manual) (28 days)	
2073854	MS-BH20 3.00 SOIL		PT 500ml	Sample date not supplied, Organic Matter (Manual) (28 days)	
2073855	MS-BH20 3.80 SOIL		PT 500ml	Sample date not supplied, Loss on Ignition (730 days)	

Key: P-Plastic T-Tub

DETS cannot be held responsible for the integrity of samples received whereby the laboratory did not undertake the sampling. In this instance samples received may be deviating. Deviating Sample criteria are based on British and International standards and laboratory trials in conjunction with the UKAS note 'Guidance on Deviating Samples'. All samples received are listed above. However, those samples that have additional comments in relation to hold time, inappropriate containers etc are deviating due to the reasons stated. This means that the analysis is accredited where applicable, but results may be compromised due to sample deviations. If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.
 Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.
 The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-
 Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

Crocidolite = Blue Asbestos, Amosite = Brown Asbestos, Chrysotile = White Asbestos. Anthophyllite, Actinolite and Tremolite are other forms of Asbestos. Samples are analysed by DETSC 1101 using polarised light microscopy in accordance with HSG248 and documented in-house methods. NAD = No Asbestos Detected. Where a sample is NAD, the result is based on analysis of at least 2 sub-samples and should be taken to mean 'no asbestos detected in sample'. Key: * -not included in laboratory scope of accreditation.

If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.

Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.

The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-

Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

End of Report

DETS

Certificate of Analysis

Certificate Number 22-23664

Issued: 29-Nov-22

Client Fugro GeoServices Limited
Unit 43
Number One Industrial Estate
Medomsley Road
Consett
DH8 6TW

Our Reference 22-23664

Client Reference F212561

Order No 386/122836/SB

Contract Title Keadby 3 low carbon gas

Description 58 Soil samples, 3 Core samples.

Date Received 18-Nov-22

Date Started 18-Nov-22

Date Completed 29-Nov-22

Test Procedures Identified by prefix DETSn (details on request).

Notes Opinions and interpretations are outside the laboratory's scope of ISO 17025 accreditation. This certificate is issued in accordance with the accreditation requirements of the United Kingdom Accreditation Service. The results reported herein relate only to the material supplied to the laboratory. This certificate shall not be reproduced except in full, without the prior written approval of the laboratory.

DETS cannot be held responsible for the integrity of samples received whereby the laboratory did not undertake the sampling. In this instance samples received may be deviating. Deviating Sample criteria are based on British and International standards and laboratory trials in conjunction with the UKAS note 'Guidance on Deviating Samples'. All samples received are listed above. However, those samples that have additional comments in relation to hold time, inappropriate containers etc are deviating due to the reasons stated. This means that the analysis is accredited where applicable, but results may be compromised due to sample deviations. If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.

Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.

The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-

Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

Crocidolite = Blue Asbestos, Amosite = Brown Asbestos, Chrysotile = White Asbestos. Anthophyllite, Actinolite and Tremolite are other forms of Asbestos. Samples are analysed by DETSC 1101 using polarised light microscopy in accordance with HSG248 and documented in-house methods. NAD = No Asbestos Detected. Where a sample is NAD, the result is based on analysis of at least 2 sub-samples and should be taken to mean 'no asbestos detected in sample'. Key: * -not included in laboratory scope of accreditation.

DETS cannot be held responsible for the integrity of samples received whereby the laboratory did not undertake the sampling. In this instance samples received may be deviating. Deviating Sample criteria are based on British and International standards and laboratory trials in conjunction with the UKAS note 'Guidance on Deviating Samples'. All samples received are listed above. However, those samples that have additional comments in relation to hold time, inappropriate containers etc are deviating due to the reasons stated. This means that the analysis is accredited where applicable, but results may be compromised due to sample deviations. If no sampled date (soils) or date+time (waters) has been supplied then samples are deviating. However, if you are able to supply a sampled date (and time for waters) this will prevent samples being reported as deviating where specific hold times are not exceeded and where the container supplied is suitable.

Soil Analysis Notes

Inorganic soil analysis was carried out on a dried sample, crushed to pass a 425µm sieve, in accordance with BS1377.
 Organic soil analysis was carried out on an 'as received' sample. Organics results are corrected for moisture and expressed on a dry weight basis.
 The Loss on Drying, used to express organics analysis on an air dried basis, is carried out at a temperature of 28°C +/-2°C.

Disposal

From the issue date of this test certificate, samples will be held for the following times prior to disposal :-
 Soils - 1 month, Liquids - 2 weeks, Asbestos (test portion) - 6 months

Specimen Description	Brown MUDSTONE with gypsum veins, weak	Sample Type	C
Specimen Reference		Specimen Depth [m]	24.30
		Sample Reference	10

Tolerance Checks				
Parameter	Limit	Location	Data	Result
Perpendicularity	0.250°	End 1, Diameter 1	0.017°	Pass
		End 1, Diameter 2	0.516°	Fail
		End 2, Diameter 1	0.222°	Pass
		End 2, Diameter 2	0.334°	Fail
Parallelism	0.250°	Diameter 1	0.026°	Pass
		Diameter 2	-0.189°	Pass
Straightness	0.500 mm	All Sides	> 0.500 mm	Fail
Flatness	0.025 mm from trendline	All Ends	> 0.025 mm	Fail

Specimen Parameters	
Diameter [mm]	101.58
Length [mm]	211.40
Length / Diameter Ratio	2.08
Specimen Condition	as received
Test Results	
Date of Test	17/10/2022
Bulk Density [Mg/m ³]	2.44
Water Content [%]	7.9
Stress Rate [MPa/s]	0.0587
Mode of Failure	Axial Cleavage
Uniaxial Compressive Strength [MPa]	5.8

Machine information: Controls C56Z00 3000kN Compression Machine. Serial No. 18009103.

Issue Date	31/10/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	31/10/2022
Remarks:	Not all tolerances were met, a best effort was made as required by ASTM D4543-19				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW, United Kingdom

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

Remarks:	Not all tolerances were met, a best effort was made as required by ASTM D4543-19				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW, United Kingdom

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

LABORATORY TEST CERTIFICATE

Determination of Uniaxial Compressive Strength of Rock

1483

Preparation: ASTM D4543-19. Test: ISRM: 2007, page 153, part 1

Project Reference	F212561	Location ID	MS-BH06
Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	24.66
Specimen Description	Grey MUDSTONE with gypsum veins, moderately weak	Sample Type	C
Specimen Reference		Specimen Depth [m]	24.66
		Sample Reference	8

Tolerance Checks				
Parameter	Limit	Location	Data	Result
Perpendicularity	0.250°	End 1, Diameter 1	0.017°	Pass
		End 1, Diameter 2	0.003°	Pass
		End 2, Diameter 1	0.101°	Pass
		End 2, Diameter 2	0.143°	Pass
Parallelism	0.250°	Diameter 1	0.095°	Pass
		Diameter 2	0.173°	Pass
Straightness	0.500 mm	All Sides	> 0.500 mm	Fail
Flatness	0.025 mm from trendline	All Ends	> 0.025 mm	Fail

Specimen Parameters	
Diameter [mm]	99.69
Length [mm]	214.05
Length / Diameter Ratio	2.15
Specimen Condition	as received
Test Results	
Date of Test	18/10/2022
Bulk Density [Mg/m ³]	2.41
Water Content [%]	10.4
Stress Rate [MPa/s]	0.0590
Mode of Failure	Axial Cleavage
Uniaxial Compressive Strength [MPa]	16.0

Machine information: Controls C56Z00 3000kN Compression Machine. Serial No. 18009103.

Issue Date	31/10/2022	Certificate Reference		Authorised by	alcocka

Specimen Parameters	
Diameter [mm]	101.55
Length [mm]	208.78
Length / Diameter Ratio	2.06
Specimen Condition	as received
Test Results	
Date of Test	07/12/2022
Bulk Density [Mg/m ³]	2.39
Water Content [%]	14.0
Stress Rate [MPa/s]	0.0401
Mode of Failure	Axial Cleavage
Uniaxial Compressive Strength [MPa]	9.6

Machine information: Controls C56Z00 3000kN Compression Machine. Serial No. 18009103.

Issue Date	12/12/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	12/12/2022
Remarks:	Not all tolerances were met, a best effort was made as required by ASTM D4543-19				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW, United Kingdom

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

LABORATORY TEST CERTIFICATE
Determination of Uniaxial Compressive Strength of Rock

1483

Preparation: ASTM D4543-19. Test: ISRM: 2007, page 153, part 1

Project Reference	F212561	Location ID	MS-BH10
Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	31.35
Specimen Description	Brown MUDSTONE with gypsum veins, weak	Sample Type	C
Specimen Reference		Specimen Depth [m]	31.35
		Sample Reference	56

Tolerance Checks				
Parameter	Limit	Location	Data	Result
Perpendicularity	0.250°	End 1, Diameter 1	0.001°	Pass
		End 1, Diameter 2	0.124°	Pass
		End 2, Diameter 1	0.086°	Pass
		End 2, Diameter 2	0.067°	Pass
Parallelism	0.250°	Diameter 1	0.08°	Pass
		Diameter 2	-0.062°	Pass
Straightness	0.500 mm	All Sides	< 0.500 mm	Pass
Flatness	0.025 mm from trendline	All Ends	> 0.025 mm	Fail

Specimen Parameters	
Diameter [mm]	78.46
Length [mm]	168.16
Length / Diameter Ratio	2.14
Specimen Condition	as received
Test Results	
Date of Test	09/12/2022
Bulk Density [Mg/m ³]	2.37
Water Content [%]	13.0
Stress Rate [MPa/s]	0.0392
Mode of Failure	Single Shear
Uniaxial Compressive Strength [MPa]	9.8

Machine information: Controls C56Z00 3000kN Compression Machine. Serial No. 18009103.

Issue Date	16/12/2022	Certificate Reference		Authorised by	huntc

LABORATORY TEST CERTIFICATE

Determination of Uniaxial Compressive Strength of Rock

1483

Preparation: ASTM D4543-19. Test: ISRM: 2007, page 153, part 1

Project Reference	F212561	Location ID	MS-BH21
Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	20.08
Specimen Description	Grey MUDSTONE, medium strong	Sample Type	C
Specimen Reference		Specimen Depth [m]	20.08
		Sample Reference	9

Tolerance Checks				
Parameter	Limit	Location	Data	Result
Perpendicularity	0.250°	End 1, Diameter 1	0.137°	Pass
		End 1, Diameter 2	0.187°	Pass
		End 2, Diameter 1	0.035°	Pass
		End 2, Diameter 2	0.175°	Pass
Parallelism	0.250°	Diameter 1	-0.119°	Pass
		Diameter 2	-0.047°	Pass
Straightness	0.500 mm	All Sides	< 0.500 mm	Pass
Flatness	0.025 mm from trendline	All Ends	> 0.025 mm	Fail

Specimen Parameters	
Diameter [mm]	101.93
Length [mm]	211.20
Length / Diameter Ratio	2.07
Specimen Condition	as received
Test Results	
Date of Test	23/11/2022
Bulk Density [Mg/m ³]	2.57
Water Content [%]	5.6
Stress Rate [MPa/s]	0.0599
Mode of Failure	Axial Cleavage
Uniaxial Compressive Strength [MPa]	40.7

Machine information: Controls C56Z00 3000kN Compression Machine. Serial No. 18009103.

Issue Date	24/11/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	24/11/2022
Remarks:	Not all tolerances were met, a best effort was made as required by ASTM D4543-19

Equivalent Diameter [mm]	86.7	87.0	63.8
Point Load Strength Index, Is [MPa]	3.5	2.3	1.4
Point Load Strength Index, Is(50) [MPa]	4.5	3	1.6
Specimen Description	Grey MUDSTONE	Grey MUDSTONE	Grey MUDSTONE
Remarks			

Direction

L - Parallel to planes of weakness
P - Perpendicular to planes of weakness
U - Unknown or random

Dimensions

Dps - Distance between platens (platen separation)
Dps' - Distance between platens at failure
Lne - Length from platens to nearest free end
W - Width of shortest dimension perpendicular to load, P

Issue Date	07/11/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)			Authorised Date	07/11/2022
Remarks:	Size factor, F = (De/50)0.45 for all tests				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

Determination of Point Load Strength Index

ISRM 1976-2006, page 125

1483

Project Reference	F212561	Location ID	MS-BH10
Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	37.16
		Sample Type	C
		Sample Reference	62

Test Data			
Specimen Reference	1	2	3
Specimen Depth [m]	37.16	37.16	37.16
Test Type	Diametral	Axial	Irregular Lump
Test Direction	U	U	U
Ln _e [mm]	39.0	-	34.0
Width [mm]	79.0	79.0	47.0
Dps [mm]	79.0	48.0	24.0
Dps' [mm]	72.0	38.0	17.0
Force [kN]	1.12	2.32	0.91
Equivalent Diameter [mm]	75.4	61.8	31.9
Point Load Strength Index, I _s [MPa]	0.2	0.6	0.9
Point Load Strength Index, I _s (50) [MPa]	0.2	0.7	0.7
Specimen Description	Brown MUDSTONE with gypsum veins	Brown MUDSTONE with gypsum veins	Brown MUDSTONE with gypsum veins
Remarks			

<p>Direction L - Parallel to planes of weakness P - Perpendicular to planes of weakness U - Unknown or random</p> <p>Dimensions Dps - Distance between platens (platen separation) Dps' - Distance between platens at failure Ln_e - Length from platens to nearest free end W - Width of shortest dimension perpendicular to load, P</p>					
Issue Date	16/12/2022	Certificate Reference		Authorised by	huntc
Client	SSE Generation Limited (SSE)		Authorised Date	13/12/2022	
Remarks:	Size factor, F = (De/50)0.45 for all tests				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW	
Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

Project Name	Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation	Depth Top [m]	15.32
		Sample Type	C
		Sample Reference	5

Test Data			
Specimen Reference	1	2	3
Specimen Depth [m]	15.32	15.32	15.32
Test Type	Diametral	Axial	Irregular Lump
Test Direction	U	U	U
Lne [mm]	66.0	-	49.0
Width [mm]	97.0	98.0	56.0
Dps [mm]	97.0	55.0	48.0
Dps' [mm]	92.0	41.0	26.0
Force [kN]	0.28	1.34	0.82
Equivalent Diameter [mm]	94.5	71.5	43.1
Point Load Strength Index, Is [MPa]	<0.1	0.3	0.4
Point Load Strength Index, Is(50) [MPa]	<0.1	0.3	0.4
Specimen Description	Brown MUDSTONE	Brown MUDSTONE	Brown MUDSTONE
Remarks			

Direction

L - Parallel to planes of weakness
P - Perpendicular to planes of weakness
U - Unknown or random

Dimensions

Dps - Distance between platens (platen separation)
Dps' - Distance between platens at failure
Lne - Length from platens to nearest free end
W - Width of shortest dimension perpendicular to load, P

Issue Date	12/12/2022	Certificate Reference		Authorised by	alcocka
Client	SSE Generation Limited (SSE)		Authorised Date	12/12/2022	
Remarks:	Size factor, F = (De/50)0.45 for all tests				

Fugro GeoServices Ltd. Unit 43, Number One Industrial Estate, Medomsley Road, Consett, DH8 6TW

Testing was performed at the Fugro GeoServices Ltd laboratory at the address shown above. Results relate only to the sample tested, having been authorised by persons qualified to do so. Opinions and interpretations are outside the scope of accreditation. Unless stated otherwise the sample was tested in the condition it was received at the laboratory.

LABORATORY TESTING OF SOIL

Introduction

We refer to samples taken from Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation and delivered to our laboratory on 12th December 2022.

Material & Source

Sample Reference : See Report Plates
Sampled By : Client
Sampling Certificate : Not Supplied
Location : See Report Plates
Description : See Page 2
Date Sampled : Not Supplied
Date Tested : 12th December 2022 Onwards
Source : F212561 - Keadby 3 Low Carbon Gas Power Station Project – Ground Investigation

Test Results

As Detailed On Page 2 to Page 6 inclusive

Comments

The results contained in this report relate to the sample(s) as received
Opinions and interpretations expressed herein are outside the scope of UKAS accreditation
This report should not be reproduced except in full without the written approval of the laboratory
All remaining samples for this project will be disposed of 28 days after issue of this test certificate

Project-Specific Geoenvironmental Testing Suites	L.1.2

L.1.1 Guidance Notes on Chemical Analysis for Contaminated Land Assessment

L.1.1.1 Sampling, Sample Preservation, Transport and Storage

Sampling of soils for environmental chemical analysis is undertaken to the standards set out in BS 10175:2011+A2:2017, sampling of groundwater is undertaken as per BS EN ISO 22475-1:2021 and BS ISO 5667-11:2009, sampling of surface waters as per BS EN ISO 5667-1:2006 and BS ISO 5667-6:2016+A11:2020, and sampling of ground gases for environmental testing as per CIRIA Guidance C665.

The sample container types used are dictated by the requirements of chemical testing as set out in the project specification and as provided by the selected environmental testing laboratory. Sample containers are filled as instructed by laboratory guidelines, ensuring minimisation of sample headspace.

Where sample volumes are limited by the sampling technique (e.g. dynamic sampling) certain sample container types may be prioritised to achieve the most comprehensive testing possible.

Samples are stored on site in a refrigerator prior to despatch, unless otherwise stated. Samples are despatched to the analytical laboratory on the day of sampling under Chain of Custody (CoC), packed in cool boxes. To maintain the temperature of the samples ice packs are placed in the cool boxes. Sample temperature is measured on receipt at the designated analytical laboratory. Temperature control is maintained at the analytical laboratory prior to receipt of testing instructions, preparation and analysis.

Where testing instructions are to be provided by the Engineer/Client blank testing schedules are provided as standard within 1 to 2 working days of sampling.

L.1.1.2 Scheduled Testing

The requested chemical analyses scheduled on available samples given on the relevant CoC.

The schedule lists the date of sampling, CoC number under which the samples were transported, tests requested and laboratory certificate reference for all samples.

L.1.1.3 Laboratory Analytical Methodologies and Accreditation

Analytical laboratories used by FGSL are accredited by UKAS (United Kingdom Accreditation Service). Dependent on Limits of Detection being achievable as requested at the time of scheduling, chemical analyses on soils, waters and gases will, where possible, be accredited by MCERTS (Monitoring Certification Scheme). MCERTS is the Environment Agency's performance standard for laboratories undertaking chemical testing. The accreditation applicable for individual tests is presented on the analytical laboratory test certificates presented in this report.

A summary of the methodologies used by the analytical laboratory in carrying out the requested analyses is presented on the summary pages of the analytical laboratory test

certificates. Further information may be obtained on the test methodologies by contacting the laboratory concerned.

L.1.1.4 Deviating Samples

UKAS is the accreditation body responsible for auditing laboratories to both ISO 17025 and MCERTS in the UK. All UKAS accredited laboratories are required to operate appropriate procedures for the handling of deviating samples.

Deviating (or non-conforming) samples are defined as those which may have been compromised in some way during sampling, transportation, storage or analysis, and which may cause the integrity of the analytical data to be in doubt.

Examples of deviating samples that can occur from sampling, transportation and storage issues include:

- Incorrect sample containers for analyses requested, for example, no separate volatile container supplied or samples for organics analysis supplied in plastic containers;
- Headspace present in containers for volatile compounds or Biological Oxygen Demand (BOD) analyses;
- No sampling date supplied (mandatory for MCERTS);
- No sampling time supplied (applicable for certain water parameters);
- Temperature exceeded;
- Holding time for the analysis exceeded.

Where deviating samples are subsequently analysed, UKAS requires that the competent laboratory 'shall include a disclaimer in the report, clearly stating that the sample was deviating and that, as a result, the test result(s) may be invalid'. It is also a condition of MCERTS that the whole results certificate is included in reports sent to the Client, including all supporting information, and not just the results sheets. Each analytical report therefore contains a page detailing the deviating samples and the reasons for the non-conformity.

FGSL undertakes to sample, record, transport and store samples in such a way that deviating samples should not occur unless for reasons outside of FGSL's control.

L.1.1.5 Waste Acceptance Criteria Testing

Where samples have been scheduled for Waste Acceptance Criteria (WAC) testing to BS EN 12457, Part 3, analysis is undertaken for one of the Full, Hazardous or Inert WAC suites, as specified and as detailed below.

Full WAC Suite: The solid material from each sample is tested for: total organic carbon (TOC); loss on ignition (LOI); benzene, toluene, ethylbenzene and xylene (BTEX); Polychlorinated biphenyls (PCB's); Total petroleum hydrocarbons (TPH (C10 – C40)); Polycyclic aromatic hydrocarbons (PAHs); pH value; and acid neutralisation capacity. Two leachate specimens for each sample are prepared at liquid to solid ratios of 2:1 and then 8:1 and both are analysed for arsenic, barium, cadmium, chromium, copper, mercury, molybdenum, nickel, lead,

antimony, selenium, zinc, chloride, fluoride, sulphate, total dissolved solids, phenol index and dissolved organic carbon.

Hazardous WAC Suite: The solid material from each sample is tested for (TOC), (LOI) and acid neutralisation capacity. Two leachate specimens for each sample are prepared at liquid to solid ratios of 2:1 and then 8:1 and both are analysed for arsenic, barium, cadmium, chromium, copper, mercury, molybdenum, nickel, lead, antimony, selenium, zinc, chloride, fluoride, sulphate, total dissolved solids and dissolved organic carbon.

Inert WAC Suite: The solid material from each sample is tested for TOC, BTEX, PCB's, TPH (C10 – C40) and PAH. Two leachate specimens for each sample are prepared at liquid to solid ratios of 2:1 and then 8:1 and both analysed for arsenic, barium, cadmium, chromium, copper, mercury, molybdenum, nickel, lead, antimony, selenium, zinc, chloride, fluoride, sulphate, total dissolved solids, phenol index and dissolved organic carbon.

Results calculation: The results of the 2:1 and 8:1 leachate specimens are then calculated to give a liquid to solid ratio of 10:1 result in mg/kg. These 10:1 results, and the results of the solid determinations, can be compared to the values set out in the guidance produced by the Environment Agency (2005) to assist with appropriate disposal to landfill, under the Landfill Directive (1999/31/EC).

L.1.1.6 Chemical Analysis on Leachates Prepared from Soil Samples

Where artificially produced leachate specimens are requested from soil samples the leachate preparation technique is in accordance with British Standard BS EN 12457, as detailed on the Schedules.

The following is a summary of the different leaching preparations available:

- BS EN 12457-1: One stage test carried out at a liquid to solid ratio of 2:1;
- BS EN 12457 2: One stage test carried out at a liquid to solid ratio of 10:1;
- BS EN 12457 3: Two stage test carried out at a liquid to solid ratio of 2:1 followed by 8:1, giving a cumulative liquid to solid ratio of 10:1.

The resultant leachate specimens are then tested for the list of parameters as scheduled.

L.1.1.7 AGS Data for Chemistry Testing

Chemical testing results are provided in AGS 4.0 format. It should be noted that where laboratory methodologies differ, or determinants tested do not appear on the AGS list for chemical test names (ERES_CODE), a new and unique code may be used for an individual test.

L.2 Accreditation and Calibration Reports

Title	Reference
ALS UKAS Schedule of Accreditation	UKAS number 1291

Schedule of Accreditation

issued by

United Kingdom Accreditation Service

2 Pine Trees, Chertsey Lane, Staines-upon-Thames, TW18 3HR, UK

 <p>1291</p> <p>Accredited to ISO/IEC 17025:2017</p>	<h3>ALS Laboratories (UK) Limited</h3> <p>Issue No: 134 Issue date: 31 October 2022</p>	
	<p>Units 7 & 8 Hawarden Business Park Manor Road Off Manor Lane Hawarden Deeside CH5 3US</p>	<p>Contact: Kathleen Burns [REDACTED] [REDACTED] E-Mail: [REDACTED]@alsglobal.com Website: www.alsenvironmental.co.uk</p>
<p>Testing performed at the above address only</p>		

DETAIL OF ACCREDITATION

Materials/Products tested	Type of test/Properties measured/Range of measurement	Standard specifications/ Equipment/Techniques used
ASBESTOS IN BULK MATERIALS including materials and products suspected of containing asbestos	<p><u>Health and Hygiene</u></p> <p>Identification of: Amosite Chrysotile Crocidolite Fibrous Actinolite Fibrous Anthophyllite Fibrous Tremolite</p>	<p>Health and Safety Executive - Asbestos: The Analysts' Guide (HSG 248) – 2021</p> <p>Documented In-House Method TM 048 using stereo-microscopy, polarised light optical microscopy and dispersion staining based on HSG 248</p>
ASBESTOS IN SOILS – The Identification of Asbestos fibres in bulk samples of Soil, <i>specifically: Soil Aggregate</i>	<p>Identification of: Amosite Chrysotile Crocidolite Fibrous Actinolite Fibrous Anthophyllite Fibrous Tremolite</p>	<p>Documented In-House Method TM 048 using stereo-microscopy, polarised light optical microscopy and dispersion staining based on HSG 248</p>
ASBESTOS IN SOILS – The Identification and Quantification of Asbestos fibres in bulk samples of Soil, <i>specifically: Soil</i>	<p>Identification and Quantification of Asbestos content of: Amosite Chrysotile Crocidolite Fibrous Actinolite Fibrous Anthophyllite Fibrous Tremolite</p>	<p>Documented In-House Methods TM 048 for identification using stereo-microscopy, polarised light optical microscopy and dispersion staining based on HSG 248. Documented In-House Method TM 304 for quantification of asbestos.</p>
ASBESTOS IN SOILS (Dustiness)	<p>Measurement of Dustiness</p>	<p>Documented In-House Method TM 419 based on BS EN15051-2:2013 +1:2016 “Measurement of the dustiness of bulk materials; Part 2: Rotating drum method” based on HSG 248</p>

Issue No: 134 Issue date: 31 October 2022

Testing performed at main address only

Materials/Products tested	Type of test/Properties measured/Range of measurement	Standard specifications/ Equipment/Techniques used
WATERS (cont'd)	<u>Chemical Tests</u> (cont'd)	Documented In-House Method
Ground water, surface water, treated sewage and landfill leachates	Total Metals: Selenium	TM 152 by ICP-MS with KED
Surface Water, treated sewage effluent and trade effluent	Total Petroleum Hydrocarbons	TM 235 by Infra-red
Potable water (non-regulatory), Ground water, Surface waters and Final effluent	Extractable Petroleum Hydrocarbons C10 - C40	TM 172 by GC-FID
Surface Waters, Ground Waters	Semi-Volatile Organic Compounds (SVOCs), specifically Bis(2-chloroethyl)ether 2-Chlorophenol 1,4-Dichlorobenzene 1,3-Dichlorobenzene 1,2-Dichlorobenzene 2-Methylphenol N-nitrosodi-n-propylamine Hexachloroethane 4-Methylphenol Nitrobenzene Isophorone 2-Nitrophenol 2,4-Dimethylphenol Bis(2-chloroethoxy)methane 2,4-Dichlorophenol 1,2,4-Trichlorobenzene Naphthalene Hexachlorobutadiene 4-Chloro-3-methylphenol 2-Methylnaphthalene 2,4,6-Trichlorophenol 2,4,5-Trichlorophenol 2-Chloronaphthalene 2-Nitroaniline Dimethyl phthalate Acenaphthylene 2,6-Dinitrotoluene	TM 176 by GC-MS

Testing performed at main address only

Materials/Products tested	Type of test/Properties measured/Range of measurement	Standard specifications/ Equipment/Techniques used
WATERS (cont'd)	<u>Chemical Tests</u> (cont'd)	
Groundwater, Surface Water	Total Dissolved Solids (TDS) By Calculation	TM 256 by automated robot (Skalar)
Ground Water, Landfill Leachate, Treated and Untreated Sewages, Trade Effluent, Potable Water (non-regulatory)	Total Mercury	TM 183 by Cold Vapour Atomic Fluorescence Spectroscopy
Groundwater, Surface Water, Landfill Leachate, Treated and Untreated Sewages, Trade Effluents	Chemical Oxygen Demand (COD) Filtered, settled & total	TM 107, PM210 using Dr Lange Kit,
Groundwater, Surface Water, Landfill Leachate, Treated and Untreated Sewages, Trade Effluents	Biochemical Oxygen Demand (BOD) Settled & total	TM 045, PM210 based on MEWAM BOD5, 2 nd Edition 1988/AWWA/ APHA, 20 th Edition - Method 5210B
Groundwater, Surface Water, Landfill Leachate, Treated and Untreated Sewages, Trade Effluents	Anions: Bromide Chloride Fluoride Nitrate Nitrate as N and NO ₃ Nitrite Nitrite as N and NO ₂ Phosphate Sulphate	TM 226 by ion chromatography
Groundwater, Surface Water, Landfill Leachate, Treated and Untreated Sewages, Trade Effluents and Saline water	Alkalinity	TM 043 by titration and auto-titrator based on AWWA/APHA 20 th Edition - Method 2320B/ BS 2690:Part 109:1984 (Ref: BS 2690)

Issue No: 134 Issue date: 31 October 2022

Testing performed at main address only

Materials/Products tested	Type of test/Properties measured/Range of measurement	Standard specifications/ Equipment/Techniques used
WATERS (cont'd)	<u>Chemical Tests</u> (cont'd)	
Groundwater, Surface Water, Saline water, Treated and Untreated Sewages, Trade Effluents	Ammonium Ammoniacal Nitrogen as N and NH ₃	TM 099 by Kone Analyser based on BS 2690 Part 7:1968/ BS 6068:Part 2.11:1984
Groundwater, surface water, Untreated Sewage, Treated Sewage, Trade Effluents	Total Inorganic Nitrogen (by calculation)	TM 184 by Kone analyser
Groundwater, Surface Water, Treated and Untreated Sewages, Trade Effluents	<u>Anions:</u> Total Oxidised Nitrogen (TON) TON as N and NO ₃ Chloride	TM 184 by automated discrete analyser (Kone)
Groundwater, Surface Water, Saline Water, Treated and Untreated Sewages, Trade Effluents	Sulphate as S and SO ₄ Phosphate as P and PO ₄ Nitrite as N and NO ₂ Nitrate (calculated) as N & NO ₃	TM 184 by Kone analyser
Saline Water	Total Oxidised Nitrogen (TON) TON as N and NO ₃ Nitrate (calculated) as N & NO ₃	TM 281 by Kone analyser
Groundwater, Surface Waters, Landfill Leachate, Treated and Untreated Sewages, Trade Effluents, Saline water, Potable Water (non-regulatory)	Electrical Conductivity at 20 °C	TM 120 using a Digital Conductivity Meter based on BS 2690:Part 119:1981
Ground water, surface water, Landfill leachate, Untreated Sewage, Treated Sewage, Trade Effluent	Total Nitrogen Calculation of Kjeldahl Nitrogen	TM 212 by Skalar
Groundwater, Surface Water, Treated and Untreated Sewages, Trade Effluents, Saline water, Potable Water (non-regulatory)	Total Suspended Solids	TM 022 by Gravimetric Determination based on BS 2690:Part 120:1981

CERTIFICATE OF ANALYSIS

Date of report Generation: 21 September 2022
Customer: Fugro GeoServices Ltd - Keadby
Sample Delivery Group (SDG): 220906-15
Your Reference: F212561
Location: Keadby 3
Report No: 661970
Order Number: 386/121917/CP

This report has been revised and directly supersedes 661534 in its entirety.

We received 4 samples on Friday September 02, 2022 and 3 of these samples were scheduled for analysis which was completed on Wednesday September 21, 2022. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden.

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Approved By:

Sonia McWhan

Operations Manager

Sample Descriptions

Grain Sizes

very fine	<0.063mm	fine	0.063mm - 0.1mm	medium	0.1mm - 2mm	coarse	2mm - 10mm	very coarse	>10mm
-----------	----------	------	-----------------	--------	-------------	--------	------------	-------------	-------

Lab Sample No(s)	Customer Sample Ref.	Depth (m)	Colour	Description	Inclusions	Inclusions 2
26830947	MS-BH06	0.10 - 0.10	Light Brown	Sandy Clay Loam	Stones	Vegetation
26830955	MS-BH06	0.50 - 0.50	Light Brown	Sandy Clay Loam	Vegetation	None
26830962	MS-BH06	0.90 - 0.90	Light Brown	Sand	None	None

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

CERTIFICATE OF ANALYSIS

SDG: 220906-15
Client Ref: F212561

Report Number: 661970
Location: Keadby 3

Superseded Report: 661534

Appendix

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALS reserve the right to charge for samples received and stored but not analysed.

3. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

4. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

5. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

6. NDP - No determination possible due to insufficient/unsuitable sample.

7. Results relate only to the items tested.

8. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

9. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

10. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

11. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

12. For dried and crushed preparations of soils volatile loss may occur e.g volatile mercury.

13. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

14. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

15. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

16. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

17 Data retention. All records, communications and reports pertaining to the analysis are archived for seven years from the date of issue of the final report.

General

18. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

19. Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Matrix interference
♦	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to late arrival of instructions or samples
§	Sampled on date not provided

20. Asbestos

When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2021), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials and soils are obtained from supplied bulk materials and soils which have been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2021).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining.

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Respirable Fibres

Respirable fibres are defined as fibres of <3 µm diameter, longer than 5 µm and with aspect ratios of at least 3:1 that can be inhaled into the lower regions of the lung and are generally acknowledged to be most important predictor of hazard and risk for cancers of the lung.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

CERTIFICATE OF ANALYSIS

Date of report Generation:	21 September 2022
Customer:	Fugro GeoServices Ltd - Keadby
Sample Delivery Group (SDG):	220906-16
Your Reference:	F212561
Location:	Keadby 3
Report No:	661971
Order Number:	386/121917/CP

This report has been revised and directly supersedes 661649 in its entirety.

We received 3 samples on Friday September 02, 2022 and 3 of these samples were scheduled for analysis which was completed on Wednesday September 21, 2022. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden.

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Lab Sample No(s)	Customer Sample Ref.	Depth (m)	Colour	Description	Inclusions	Inclusions 2
26830982	MS-BH21	0.10 - 0.10	Light Brown	Sandy Clay Loam	Vegetation	None
26830989	MS-BH21	0.50 - 0.50	Dark Brown	Silty Clay Loam	Stones	Vegetation
26830997	MS-BH21	0.80 - 0.80	Light Brown	Sandy Clay	None	None

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

General Comments

This report shall not be reproduced except in full, without prior written approval from the laboratory.

The laboratory declares that the test results relate only to the listed samples. If the section "Sampled by" of the Certificate of analysis states: "Sampled by Customer" then the results relate to the sample as received.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. Measurement uncertainty is expressed as expanded measurement uncertainty with coverage factor $k = 2$, representing 95% confidence level.

Key: LOR = Limit of reporting; MU = Measurement Uncertainty. The MU does not include sampling uncertainty.

The end of result part of the certificate of analysis

Brief Method Summaries

Analytical Methods	Method Descriptions
Location of test performance: Na Harfe 336/9 Prague 9 - Vysocany Czech Republic 190 00	
S-DRY-GRCI	CZ_SOP_D06_01_045 (CSN ISO 11465, CSN EN 12880, CSN EN 14346:2007), CZ_SOP_D06_07_046 (CSN ISO 11465, CSN EN 12880, CSN EN 14346:2007, CSN 46 5735) Determination of dry matter by gravimetry and determination of moisture by calculation from measured values.
S-PESLMSA1	CZ_SOP_D06_03_182.B (CSN EN 15637, US EPA 1694) Determination of acidic herbicides and drug residues by liquid chromatography method with MS/MS detection.

A "*" symbol preceding any method indicates laboratory or subcontractor non-accredited test. If the UNICO-SUB code is stated in the method table, this only informs that the tests have been performed by a subcontractor and the results are given in an annex to the test report, including information on test accreditation. In the case when a procedure specified in an accredited method was used for non-accredited matrix, the reported results are non-accredited; please refer to information in General Comment section on the front page. If the report contains subcontracted analyses, those are made in a subcontracted laboratory outside the laboratories ALS Czech Republic, s.r.o.

The calculation methods of summation parameters are available on request in the client service.

CERTIFICATE OF ANALYSIS

SDG: 220906-16
Client Ref: F212561

Report Number: 661971
Location: Keadby 3

Superseded Report: 661649

Appendix

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALS reserve the right to charge for samples received and stored but not analysed.

3. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

4. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

5. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

6. NDP - No determination possible due to insufficient/unsuitable sample.

7. Results relate only to the items tested.

8. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

9. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

10. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

11. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

12. For dried and crushed preparations of soils volatile loss may occur e.g volatile mercury.

13. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

14. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

15. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

16. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

17 Data retention. All records, communications and reports pertaining to the analysis are archived for seven years from the date of issue of the final report.

General

18. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

19. Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Matrix interference
♦	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to late arrival of instructions or samples
§	Sampled on date not provided

20. Asbestos

When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2021), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials and soils are obtained from supplied bulk materials and soils which have been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2021).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining.

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Respirable Fibres

Respirable fibres are defined as fibres of <3 µm diameter, longer than 5 µm and with aspect ratios of at least 3:1 that can be inhaled into the lower regions of the lung and are generally acknowledged to be most important predictor of hazard and risk for cancers of the lung.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

CERTIFICATE OF ANALYSIS

Date of report Generation: 15 September 2022
Customer: Fugro GeoServices Ltd - Keadby
Sample Delivery Group (SDG): 220906-17
Your Reference: F212561
Location: Keadby 3
Report No: 661378
Order Number: 386/121917/CP

This report has been revised and directly supersedes 661208 in its entirety.

We received 4 samples on Friday September 02, 2022 and 3 of these samples were scheduled for analysis which was completed on Thursday September 15, 2022. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden.

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Lab Sample No(s)	Customer Sample Ref.	Depth (m)	Colour	Description	Inclusions	Inclusions 2
26831035	MS-BH02	1.20 - 1.20	Dark Brown	Sandy Silt Loam	Vegetation	None
26831043	MS-BH02	0.10 - 0.10	Light Brown	Clay Loam	Stones	Vegetation
26831057	MS-BH02	0.85 - 0.85	Dark Brown	Sandy Silt Loam	Vegetation	None

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

Superseded Report: 661208

Appendix

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALS reserve the right to charge for samples received and stored but not analysed.

3. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

4. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERES Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERES Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

5. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

6. NDP - No determination possible due to insufficient/unsuitable sample.

7. Results relate only to the items tested.

8. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

9. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

10. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

11. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

12. For dried and crushed preparations of soils volatile loss may occur e.g volatile mercury.

13. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

14. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

15. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

16. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

17 Data retention. All records, communications and reports pertaining to the analysis are archived for seven years from the date of issue of the final report.

General

18. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

19. Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Matrix interference
♦	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to late arrival of instructions or samples
§	Sampled on date not provided

20. Asbestos

When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2021), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials and soils are obtained from supplied bulk materials and soils which have been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2021).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining.

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Respirable Fibres

Respirable fibres are defined as fibres of <3 µm diameter, longer than 5 µm and with aspect ratios of at least 3:1 that can be inhaled into the lower regions of the lung and are generally acknowledged to be most important predictor of hazard and risk for cancers of the lung.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

Customer:	Fugro GeoServices Ltd - Keadby
Sample Delivery Group (SDG):	220906-18
Your Reference:	F212561
Location:	Keadby 3
Report No:	661972
Order Number:	386/121917/CP

This report has been revised and directly supersedes 661209 in its entirety.

We received 7 samples on Tuesday August 30, 2022 and 3 of these samples were scheduled for analysis which was completed on Wednesday September 21, 2022. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden.

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Sample Descriptions

Grain Sizes

very fine	<0.063mm	fine	0.063mm - 0.1mm	medium	0.1mm - 2mm	coarse	2mm - 10mm	very coarse	>10mm
-----------	----------	------	-----------------	--------	-------------	--------	------------	-------------	-------

Lab Sample No(s)	Customer Sample Ref.	Depth (m)	Colour	Description	Inclusions	Inclusions 2
26831162	MS-BH14	1.20 - 1.20	Light Brown	Sand	Stones	Vegetation
26831197	MS-BH14	0.45 - 0.45	Dark Brown	Sandy Clay Loam	Vegetation	None
26831204	MS-BH14	0.80 - 0.80	Dark Brown	Sandy Clay Loam	Stones	Vegetation

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

Superseded Report: 661209

Appendix

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALS reserve the right to charge for samples received and stored but not analysed.

3. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

4. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERES Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERES Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

5. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

6. NDP - No determination possible due to insufficient/unsuitable sample.

7. Results relate only to the items tested.

8. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

9. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

10. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

11. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

12. For dried and crushed preparations of soils volatile loss may occur e.g volatile mercury.

13. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

14. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

15. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

16. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

17 Data retention. All records, communications and reports pertaining to the analysis are archived for seven years from the date of issue of the final report.

General

18. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

19. Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Matrix interference
♦	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to late arrival of instructions or samples
§	Sampled on date not provided

20. Asbestos

When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2021), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials and soils are obtained from supplied bulk materials and soils which have been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2021).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining.

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anorthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Respirable Fibres

Respirable fibres are defined as fibres of <3 µm diameter, longer than 5 µm and with aspect ratios of at least 3:1 that can be inhaled into the lower regions of the lung and are generally acknowledged to be most important predictor of hazard and risk for cancers of the lung.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

CERTIFICATE OF ANALYSIS

Date of report Generation: 20 September 2022
Customer: Fugro GeoServices Ltd - Keadby
Sample Delivery Group (SDG): 220906-19
Your Reference: F212561
Location: Keadby 3
Report No: 661677
Order Number: 386/121917/CP

This report has been revised and directly supersedes 661272 in its entirety.

We received 3 samples on Tuesday August 30, 2022 and 3 of these samples were scheduled for analysis which was completed on Tuesday September 20, 2022. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden.

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Sample Descriptions

Grain Sizes

very fine	<0.063mm	fine	0.063mm - 0.1mm	medium	0.1mm - 2mm	coarse	2mm - 10mm	very coarse	>10mm
-----------	----------	------	-----------------	--------	-------------	--------	------------	-------------	-------

Lab Sample No(s)	Customer Sample Ref.	Depth (m)	Colour	Description	Inclusions	Inclusions 2
26831213	MS-BH03	0.10 - 0.10	Light Brown	Sandy Clay Loam	Vegetation	None
26831220	MS-BH03	0.30 - 0.30	Light Brown	Sandy Clay Loam	Stones	Vegetation
26831227	MS-BH03	0.80 - 0.80	Light Brown	Sand	None	N/A

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes. Measurement uncertainty is expressed as expanded measurement uncertainty with coverage factor $k = 2$, representing 95% confidence level.

Key: LOR = Limit of reporting; MU = Measurement Uncertainty. The MU does not include sampling uncertainty.

The end of result part of the certificate of analysis

Brief Method Summaries

Analytical Methods	Method Descriptions
Location of test performance: Na Harfe 336/9 Prague 9 - Vysocany Czech Republic 190 00	
S-DRY-GRCI	CZ_SOP_D06_01_045 (CSN ISO 11465, CSN EN 12880, CSN EN 14346:2007), CZ_SOP_D06_07_046 (CSN ISO 11465, CSN EN 12880, CSN EN 14346:2007, CSN 46 5735) Determination of dry matter by gravimetry and determination of moisture by calculation from measured values.
S-PESLMSA1	CZ_SOP_D06_03_182.B (CSN EN 15637, US EPA 1694) Determination of acidic herbicides and drug residues by liquid chromatography method with MS/MS detection.

A "*" symbol preceding any method indicates laboratory or subcontractor non-accredited test. If the UNICO-SUB code is stated in the method table, this only informs that the tests have been performed by a subcontractor and the results are given in an annex to the test report, including information on test accreditation. In the case when a procedure specified in an accredited method was used for non-accredited matrix, the reported results are non-accredited; please refer to information in General Comment section on the front page. If the report contains subcontracted analyses, those are made in a subcontracted laboratory outside the laboratories ALS Czech Republic, s.r.o.

The calculation methods of summation parameters are available on request in the client service.

CERTIFICATE OF ANALYSIS

SDG: 220906-19
Client Ref: F212561

Report Number: 661677
Location: Keadby 3

Superseded Report: 661272

Appendix

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALS reserve the right to charge for samples received and stored but not analysed.

3. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

4. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

5. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

6. NDP - No determination possible due to insufficient/unsuitable sample.

7. Results relate only to the items tested.

8. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

9. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

10. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

11. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

12. For dried and crushed preparations of soils volatile loss may occur e.g volatile mercury.

13. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

14. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

15. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

16. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

17 Data retention. All records, communications and reports pertaining to the analysis are archived for seven years from the date of issue of the final report.

General

18. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

19. Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Matrix interference
♦	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to late arrival of instructions or samples
§	Sampled on date not provided

20. Asbestos

When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2021), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials and soils are obtained from supplied bulk materials and soils which have been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2021).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining.

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Respirable Fibres

Respirable fibres are defined as fibres of <3 µm diameter, longer than 5 µm and with aspect ratios of at least 3:1 that can be inhaled into the lower regions of the lung and are generally acknowledged to be most important predictor of hazard and risk for cancers of the lung.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

CERTIFICATE OF ANALYSIS

Date of report Generation:	21 September 2022
Customer:	Fugro GeoServices Ltd - Keadby
Sample Delivery Group (SDG):	220906-20
Your Reference:	F212561
Location:	Keadby 3
Report No:	661973
Order Number:	386/121917/CP

This report has been revised and directly supersedes 661678 in its entirety.

We received 4 samples on Tuesday August 30, 2022 and 3 of these samples were scheduled for analysis which was completed on Wednesday September 21, 2022. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden.

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Sample Descriptions

Grain Sizes

very fine	<0.063mm	fine	0.063mm - 0.1mm	medium	0.1mm - 2mm	coarse	2mm - 10mm	very coarse	>10mm
-----------	----------	------	-----------------	--------	-------------	--------	------------	-------------	-------

Lab Sample No(s)	Customer Sample Ref.	Depth (m)	Colour	Description	Inclusions	Inclusions 2
26831241	MS-BH16	0.10 - 0.10	Dark Brown	Sandy Silt Loam	Stones	Vegetation
26831248	MS-BH16	0.45 - 0.45	Dark Brown	Sandy Clay Loam	Stones	Vegetation
26831255	MS-BH16	0.80 - 0.80	Light Brown	Sandy Clay Loam	Stones	None

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.
