Hi [redacted]
Apologies for the delay in responding to your email, due to staff leave.
I can confirm that our comment related to the adequacy of the CCR Statement that was submitted with the Environmental Permit application in November 2025. Apologies for the confusion caused.
I hope to be able to respond to you regarding the CCR statement submitted with the application early next week. And again, please accept my apologies for the confusion this has caused.
Regards,

Hi [redacted]
Are you able to provide a response to my query below to inform how we respond to the Secretary of State please?
Many thanks

Subject: [Pending]Keadby Next Generation Power Station DCO - response to Secretary of State re CCR

Hi [redacted]

We have reviewed the Environment Agency's recent response to the Secretary of State (published on PINS website yesterday [redacted].

In relation to the Environment Agency's response to Question 12 where you wrote "*We do not consider that the Applicant's Carbon Capture Readiness Statement includes all the information required and, therefore, we consider that the Statement is not sufficient*", can we please check that your comment relates to the adequacy of the CCR Statement that was submitted with the Environmental Permit application in November 2025 (prior to Decarbonisation Readiness requirements coming into force in the Environmental Permitting regime, which is currently being updated now that Decarbonisation Readiness is formally part of the Permit application process to address comments received via a Schedule 5 request from the Environment Agency) and that the Environment Agency is not at this late stage (post Examination) advising the Secretary of State that the CCR Statement that formed part of the DCO application is not sufficient to inform the DCO determination?

We are grateful for your helpful confirmation to the Secretary of State that "*any conditions within the DCO relating to Carbon Capture Readiness under the Carbon Capture Readiness (Electricity Generating Stations) Regulations 2013 will cease to have effect* [when the Environmental Permit is determined]".

Many thanks

[redacted]
