BCKLWN responses to Deadline 4 Submissions
PIN Reference No. EN0110013 – The Droves Solar Farm

The Borough Council responds to documents submitted as part of Deadline 4 as follows. For those items not explicitly referred to below, the Council's position should be taken as unchanged.

Examination Library Reference	Chapter and Title,	Summary of Changes/Issue, Paragraph/Table Reference	BCKLWN comments
REP4-018/019	5.8.4 Design Principles, Parameters and Commitments	The document has been updated to reflect discussions on PAR Mitigation Structures within Work No.1 & to update other commitments in regard to LLFA comments and drainage.	The Council will continue to defer to relevant bodies for consideration of drainage. In regard to the PAR mitigation, the Council acknowledge the 4.5m height restriction noted. There is concern however that the provision of a bund of this size on site, in particular given the extent of areas it would need to cover would be likely to have fundamentally different impacts than a fence, and we therefore request confirmation of how resultant or associated impacts would be dealt with if a bund becomes the preferred option for mitigation of the areas set out in [REP4-039]. The provision of bunds of this scale would require a considerable quantity of earth to be sourced (said to be from within the site). There is no detail of how this has been assessed from a landscape or land level perspective, in regard to how materials would be moved or in regard to any other resultant impacts on drainage and surface water.
REP4-038	8.25 Permitted Preliminary Works Environmental Management Plan	This document has been provided to outline measures to control works undertaken prior to commencement of the main works.	The Council welcomes the clarification provided by this document and has no further comments in regard to preliminary works.
