

The project East Pye Solar is planned to cover over 2,500 acres of countryside across multiple fields in South Norfolk, resulting in the removal of prime productive agricultural land, loss of food production and food security and loss of habitat for our wildlife especially those which are needed for the production of our food. loss of Best and Most Versatile (BMV) agricultural land.

I have extreme concerns of the development to historic homes and the general disruption to the rural way of life.

This proposed project will result in the industrialisation of countryside views, footpaths, and rural character.

This project contradicts South Norfolk local planning policies regarding rural protection.

the environmental and social harms of this specific project outweigh the national benefits of the solar energy generated.

I recommend the Development Consent Order (DCO) to be refused.
