

I suggest that a site visit is made to:-

St. Catherines Church, Fritton, OS Ref: 227 932, GPS Coordinates 52.492N 1.2798E

This historic, round towered church and graveyard will, I believe, become totally dominated by the solar panels and large electrical sub-station proposed for Site 5 of East Pye.

The church is used by villagers and visitors who seek peace for prayer and quiet reflection.

Visitors tend graves of their deceased loved ones and the whole place is noted for its tranquillity.

There is an historic footpath leading from the church to St John's Church in Morningthorpe that borders the proposed site of solar panels, which is walked by villagers and visitors to the parishes.

I believe that siting solar panels and an electricity sub-station near to this religious building where burials and graves are tended is completely out of keeping with the area. The amount of noise that will occur during a lengthy construction period will disturb worshippers and may disrupt funerals etc.

I respectfully request that the Inspectors visit the site, in order to assess the impact of the proposals on the area.
