

I would request that the ExA visit our home in Great Moulton (Oak Lodge, High Green, NR15 2HN), to understand the devastating effect the proposed, large National Grid substation & East Pye Solar 'Park' would have on our lives & wellbeing.

Our grounds, which we were gradually turning into an area to encourage wildlife, by planting trees & enlarging a pond, will directly back onto the proposed National Grid substation site. The constant noise, lighting & size of this, plus the vast area of solar panels, will totally destroy our peaceful, green, wildlife haven & ruin the beautiful footpath network & open spaces.

I have lived in Great Moulton all my life, brought up in a farming family. It is a small rural community, currently surrounded by important BMV agricultural land (which Government's policies state should be protected), with country lanes totally unsuitable for major construction vehicles & infrastructure that is only suitable for roofs & industrial areas.

If permission was to be granted, the East Pye Solar 'Park', along with other sites already allowed, would smother South Norfolk. We already have more than enough solar 'parks' covering valuable farmland & our countryside, please reject this unsuitable proposal.
