

I am concerned about the substantial impact the sub station planned for Great Moulton will have on the residents of Potter's Crescent. Many of the houses back onto the field which will overlook the substation. I am concerned about the impact of additional voltage and electro magnetic fields on the health of the residents and in particular children. I am also concerned about the impact of the noise of construction and the sub station on vulnerable adults with conditions such as Dementia and children with Autism. Of course the noise would impact on all residents but I do not think enough was mentioned in the EIA about the impact of noise on mental health conditions, people with chronic illness who are at home all the time and neurodiversity when noise can be dysregulating. I would urge that the properties in Potters Crescent are suggested locations for ExA site inspections. These can be seen from public land and do not require private access.
