

I would like to continue to object to This Scheme. Unfortunately due to work commitments I am unable to attend in person. This scheme is wholly inappropriate for the planned environment, its rural and surrounded by narrow lanes that would have to be widened losing established trees and hedgerows.

The construction would negatively impact all the villages and inhabitants involved and this is not a temporary construction, the plan is for 40+ years which is half a lifetime.

We live in a grade 2 listed building and advised it was a Conservation area around us and yet we will have 2 power stations, acres of solar panels, BESS and cable runs that will have an ecological impact for years to come and have been told that the Power stations will not be demolished even when the solar panels are end of life. The site of the power stations are in the middle of fields not easily accessible, currently with lots of wildlife that will be impacted so this would require additional access roads to be constructed.

The solar panels will introduce additional noise levels in what is a quiet area and will be even louder at night time. I am not against renewable energy but this is wholly inappropriate for the rural area.
