

I really don't agree with the big plans that are being proposed from the solar company. East pie. There are many other ways that solar panels could be used other than on our countryside. There proposal are going to greatly effect the countryside and all the villages around where I live. There are many current solar establishments in our area already in swainsthorpe, Swardeston, and through the country lanes towards mulbarton from Newton flotman. The scale of these establishments is huge and quick frankly spoilt our beautiful countryside. If this continues to expand. where is it going to end? Where will are food come from if it continues to swallow up our countryside. Also this isn't a lifetime span for solar panels they say it's for the environment but has it truly been researched for disposal of the solar panels once there lifetime has come to an end.
