

I am against this project on several issues. This is a rural area and the road/lanes are completely unsuitable for a project of this size and scope. The Krons was highlighted as being suitable for construction traffic. It is obvious that the applicant has never been to the Krons or they would have seen first hand the unsuitability of this road. My major concern as a retired psychologist is the effect on the local community to such a scheme. A research study was undertaken by S. Ariccio et al (2021) covering this topic. They found that people who remain in a place that has this sort of project thrust upon them quote [it] "causes an acute, grief like distress and mental health decline [while work its carried out around them]. People live and move to rural villages such as the project is going to disrupt because they enjoy the place they live in. They remain in these villages because they've chosen this lifestyle. They didn't sign up for or want this amount of disruption and negative affect on their lives. As a population we are seeing rising cases of mental ill health which personally I don't think we should be adding too by allowing all these local communities to be so negatively undermined. I understand about the need for green energy but there are other places that should be used like brown field sites or putting solar on top of all buildings. Norfolk has done its fair share of helping the cause with off shore wind farms etc. This is not the right site for this proposal.
