

I write to object strongly to the suggestion that Saxlingham Street and Church Hill should be used as an AIL route and the suggestion that a solar farm should be placed in such a highly conserved mediaeval conservation area.

- I am very concerned about the thought of an AIL vehicle passing my at least 16th century listed home, originally built as a Hall House with upper story insertion. Like other listed houses on The Street and Church Hill it has NO FOUNDATIONS and is a timber framed, clay lump wattle and daub structure. We only have some 1.5 m in front before the 1960s cut away block wall creating our parking area.

I am seriously concerned that my home could be severely damaged. If it were how, when, by whom, at whose expense, could it be repaired?? I would be left in a building unsalable and even if repaired of much much less value.

- I am very concerned that the lorries would damage the fragile drainage systems we have in place to mitigate the regular flooding the village endures. We are continually told that such occasions will increase with climate change so this situation is set to get worse!

- I am concerned that the footpaths I have used for over 40 years would become green corridors with no views to reconnect with nature and relieve the stress of the day as you walk the dog if the park encroached between Hempnall and Saxlingham.

- I am very concerned that the Ruined Church of St Marys would loose its sense of tranquillity, were the Solar farm to encroach upon it. A place many locals so for silent prayer and meditation as well as being used for services. Noise or industrialisation has no place there.

Please protect my ancient home from these AIL vehicles.
