

I live at 2 Beeches Cottage, Fritton, NR15 2QU, which is immediately opposite Site 5 of East Pye, where it is proposed to build an electric sub-station, etc.

Since my previous submission I have become aware of several further facts that I wish to be considered, these being:

1) I have been made aware of the size and type of plant that it will be necessary to import to the site on local roads which are not built for such heavy machinery. The movement of such items will be disruptive and noisy.

2) The published proposed operating hours of the construction site will interfere with my families ability to sleep and sleep patterns.

3) I am very concerned about the noise level that construction of such a large site will generate and the period of time it will take to complete. Currently there is virtually total quiet in the area. I bought a property here partly to avoid stress created by noise, as it is well documented that noise levels create mental stress. A persistent dog barking, or fireworks, will be nothing compared to the noise of building these proposals and both those examples constitute an enforceable noise nuisance order in law.

4) I have had no information as to if my property, which is not on mains drainage, will be affected by drainage issues as a result of the siting of panels and the sub-station. Furthermore as my property was built in 1864, no one has contacted me to determine if the foundations of my property will be disturbed by building activity required by East Pye.

5) When I attended the East Pye Consultation event locally, I raised queries but no responses have been forthcoming, despite promises and my name being taken. I argued with the East Pye Ecologist about the reduction in wildlife caused by the proposals but I have received no facts or figures to support his spurious claims.

6) I am very perturbed that no one seems to be considering the human and humane aspect of building a sub-station and placing solar panels so close to a working CoE Church (St Catherines) and graveyard that is still used and regularly visited by the bereaved. The noise of construction and on going noise from the site will cause distress to people.

7) The land at Site 5 is currently used for recreational purposes, there are organised shoots on the land and walkers/riders use footpaths that run across it. I am concerned that these activities will be precluded, should building work commence. I question the wisdom of putting solar panels and sub-stations where historically people are known and authorised to shoot.
