I totally object to the erection of solar panels and a BESS station on agricultural land in and around Gt Moulton. I agree with solar energy and have solar panels and storage panel at my home. I totally disagree with using agricultural Land which is needed to grow our food. With the current situation with wars going on, our need to be more self sufficient growing are own food has never been greater. I also am very concerned for our wildlife losing their habitats, peoples mental health well being once surrounded by solar panels etc. Sola panels should be on industrial buildings, houses and car parks not on agricultural land. Our beautiful Norfolk countryside is being threatened by what can only be described as violation of countryside.
