

The proposal will significantly undermine and effect the local farm land as well as the farming community. Wildlife corridors and public rights of way will be destroyed having a detrimental effect on the diverse natural landscape and the well being of the human population. The proposed cost is ridiculous especially considering there will be absolutely no benefit to the community suffocated by the development. The ongoing safety risks are still not understood adding more uncertainty and worry to the local residents. The proposal is not a negotiated and considered plan, it's a proposed enforcement act in a society that boasts strong democratic principles. If that were the case the proposal would have been thrown out years ago because hardly anyone in this area agrees with it's construction. Fast nuclear reactors would be a far better investment than hiding the carbon footprint of battery and panel production under the illusion of green energy!
