I am extremely worried about the impact of so many solar panels on my well being and also the affect it will have on wild life.

I am against solar panels on good agricultural land. This is not forward thinking. Ultimately if we continue to use farm land for solar we will finish up importing food. In my area we have an abundance of wonderful wild life. Beautiful birds including birds of prey . Rare bat colonies wild flowers and insects . Hares and deer. It is such a blessing to be able to wander through our lovely walking areas. I am devastated that land will be taken for these massive solar farms. Would it not be more beneficial to build every house and every commercial building with solar instead.
