

This Solar Blight will destroy the environment of South Norfolk. Points raised:

Farmland losing enormous amount of crops, part of which is the breadbasket of the UK.

Farm employment, apprenticeships will be lost for a generation.

Solar panels on farmland are questionable how the earth will be sustained. Some parts of fields will not receive water for the duration of the timescale of solar panels.

Solar Panels should be on industrial/farm roofs and encouraged not on good quality land.

The battery plants again are in a very rural position affecting nearby properties.

The local authorities are fully aware of the detriment this Solar Blight will have in South Norfolk.

Furthermore it is being funded by overseas investment companies.

South Norfolk is a designated Clayland Area and this should be taken into consideration.
