

The information relayed to our parish by other interested parties particularly the changes made by EPS have further hardened our opposition to this ill thought out and inappropriate scheme. Many issues have not been addressed by EPS since their first inadequate PEIR. The level of damage to the environment both natural and manmade outweighs any "green " energy which is not actually required to satisfy future needs as defined by the National Energy System Operator. EPS acknowledges that the scheme has no socio economic benefits to East Anglia. The loss of the BMV farmland is more relevant given the effects of climate change. EPS cannot prove that this land could be returned to arable after the 60 years of the scheme while the contamination of ground water both for human consumption and for crops is a likely occurrence. The road network around this area is inadequate for the number and size of the vehicles needed to supply the sites during construction yet neighbouring villages along the B1322(our main access to Norwich and emergency services) have been not been included in the consultation, another omission by EPS.
