

I am the owner of [REDACTED]. An old farmhouse on [REDACTED] [REDACTED] miles from the A140 roundabout towards Hempnall. The proposal is for solar pannels to be in the immediate fields to the east and south of our property with the main 400kva subctation being the fird to the south west. East Pye Solar have never made any contact with me although I registered with them as an interested party. I have not been advised of any noise or environmental reports for the property. The pond contains Great Crested Newts. Photographs provided to the inspectors in their reports are taken with a wide angle lens making the house apper some distance away. I have tried to attach a more appropriate photograph taken across the field proposed to be covered in panels, one from our bedroom window which would look out across this field and one showing the panel size close to a car for scale.

I hope you can see the mental impact whis would have upon our well being and visual impact to our home.
