Submission ID: S3E11CE94

I would like to support the written statements which propose that this whole project is a very dangerous land grab from private companies for a huge area of prime agricultural land in South Norfolk, which will be made into a massive brown field site, due to the unecological use of permanent large implants of concrete posts at very small intervals over the land, to support the quickly outdated solar panels. These will destroy the top soil. The solar panels only have a life of 15 years and would need to be replaced after this time. Where are they going to be disposed? Why not use this technology on existing brownfield and industrial sites like in Germany.
East Pye Solar are proposing to develop this huge solar development in South Norfolk. It would mean that the land would never be able to be returned to agricultural use and thus could be used and developed by other companies in the fto extend large suburbs of Norwich into over 3 thousand acres of prime agricultural land after the 30 year period. Is this the real reason for this land grab?
There is going to be huge disruption to our local landscape and local communities and people will only have their houses /land devalued or compulsory purchased for a project which already exceeds the UK electricity needs.
The battery sites will be emit huge and high levels of EMF and electrical radiation, not to mention the continual humming and sound disturbance to local residents. These are too close to local villages and communities which will have huge consequences on local mental and physical health of the large number of current residents.
I live in Topcroft and we will be seriously affected by the noise and disruption, road traffic and hold ups which will mean that our local business will be affected, as no tourists will want to come to this area due to the continual noise and construction traffic on our roads. Many peoples farms and businesses will be affected by this massive and insensitive [redacted], so that previously agricultural communities will become semi industrial landscapes with industrial disruption for years to come.
The electricity accumulated will all be going to the south of England and our way of life, and will not benefit the people in the area at all, apart from badly affecting their mental and physical health.
How can the government be giving the green light to huge SOLAR TECHNOLOGY for massive rural agricultural sites, near conservation villages when at the same time they are investing Millions of pounds in 'GEOENGINEERING'? - That is SOLAR DIMMING.
As documented in the Telegraph on 24th April 2025:-
[redacted]
How come they have banned Geoengineering in Florida? If it did not exist, then it would not have to be banned. Link below: Florida bans cloud seeding flights:-
[redacted]
How can our government be serious about using the SUN'S SOLAR RAYS to CREATE ELECTICITY when every day the skies are zig zagged with SPRAY PARTICULATES which BLOCK OUT THE SOLAR RAYS the sky? These are beamed with HAARP Technology which affect the weather and block out the sun every day.
See [redacted].
Pilots talking about it in an interview: -
[redacted]
These are called CHEM TRAILS contain ALUMINIUM, STRONTIAM AND BARIUM. These are POLLUTING and DIMMING our skies, local water and earth.
I am in my [redacted] now and an artist and have been observing the skies in Norfolk and Suffolk for over 50 years. in the 1970's/80's/90's the skies were BLUE BEHIND THE CLOUD OR BLUE. Now they are PALE GREY behind the clouds. This is the result of CHEMTRAILS. How can sky colour change? You only have to look at old paintings and films to see the change.
The GREY NON CLOUD cover has been noticably worse in the past decade and particularly in the past 5 years since covid (when they had to stop spraying that year, as no one flying.) This constant misty ‘cloud cover’ will STOP these SOLAR PANELS WORKING EFFECTIVELY (as they have found in SUNNY CALIFORNIA HILLTOPS. )
A sample of WEATHER PATENTS taken out since the 1940s for Weather control and cloud manipulation :-
Patent 2835530 – May 20, 1958 – Process for the Condensation of Atmospheric Humidity and Dissolution of Fog
Patent 3313487 – April 11, 1967 – Cloud Seeding Apparatus
Why is our GOVERNMENT on one hand funding SOLAR DIMMING and at the SAME TIME funding SOLAR PANELS as a method for electical production?
We the people do not feel listened to but over ruled for [redacted] and self interest with [redacted] where few profit and many people suffer.
