Submission ID: SA403BE01

Interested Party Numbers: [redacted]

We are commenting on East Pye Solar's response to our joint letter at Procedural Deadline A [PDA-044]. Please read this alongside our separate Deadline 1 Written Statements, dated 1 October 2026: Concerning our Relevant Representations. Our concerns in those statements remain.

We still do not know whether our home will be visited

In EXAM/9.22, NPE-PDA-006, East Pye Solar directs us to its draft inspection itinerary, EXAM/9.1. It says this has considered all requests for site visits and explains why they have been included or excluded.

However, EXAM/9.1 contains no entry for us or our request, PDA-044. Location 3 refers to properties near Sites 4 and 5, but does not identify our home. We therefore do not know whether the Inspectors will visit us, whether our request has been refused, or whether it has been overlooked. Referring us to a document that does not give that answer leaves us no further forward.

We ask the Examining Authority to confirm whether our home will be included. If it will not, please explain the grounds for that decision. Please ensure our request and the response are expressly recorded in the updated itinerary.

We remain willing to allow the Inspectors onto our property. Seeing our entrance, frontage and the places affected by flooding would help them understand our concerns. A visit to another property, or simply driving along the road, would not necessarily show these difficulties. Our Deadline 1 statements explain them in more detail.

Our other questions remain

It is good that NPE-PDA-001 says our house and garden are not needed. But referring several different questions back to that answer does not explain what rights are wanted over the ground beneath the road, what work could take place or how long those rights would last. Please answer the property questions in our Deadline 1 statement plainly, with a clear paper plan. We have not agreed to any taking of land or rights.

The general assurances about maintaining access and avoiding significant flooding effects in NPE-PDA-008 and 009 do not explain how our particular entrance and existing flooding problems have been checked. We refer to our Deadline 1 statements rather than repeat those concerns here. Please provide answers about our own circumstances, not just references back to large documents.

Please continue to write to us by post

A friend is helping us submit these comments online because of the short time available caused by the documents not being put on the website until 14th October has made it difficult to read the new material and respond by post before the deadline. This does not change our request for correspondence by post. Please send the decision on our inspection request, and other important information, by letter to the address already held for us, in straightforward language.
