Submission ID: SFD86986B

I really believe this should not go ahead. This area, where you plan to put these solar panels is used by walkers, cyclists and horse riders. [redacted] Getting out on her horse is detrimental for her mental and physical wellbeing. These planned solar panels will stop us from riding in a safer and a very beautiful environment. Instead it will force us to go on the roads which is unsafe, cars speeding past us, being too close to the horses/riders or shouting at us which spooks the horses and can cause fatal injuries. We are told to get out more into the countryside, getting kids off computers but this will take this away from us. Horses hate change, they will spook at the lorry's, equipment and the noises making it unsafe for us to use. Where will my horse go as you are running the cables through her field? I need her close to home. Where will we get hay from? Again you are running the cables through the our field that provide us hay/straw. We/locals are the ones losing out. You are taking our country side away, yet tell us to get out more. Doesn't make any sense, all for what? someone making money and it all left to rot in the future.
