Submission ID: S0BE48595

As a bird group we are concerned the large scale of the project will have a massive visual impact, loss of agricultural land, health and wellbeing of residents and a large impact on wildlife and ecology. I have also attached various recommendations for sites at Dinnington, Anston, Thurcroft, Brampton and Kiveton.

Kiveton

Fields to the [redacted] need more land scrape mitigation and enhancement due to breeding Skylarks and Barn Owls and Long eared Owl(has bred) presence in the area. There seems to be more land scrape mitigation and enhancement towards Harthill and Woodall which should be also used as a continuation at Kiveton. Have you carried out breeding bird or ecology surveys out for this area. I have carried out breeding bird surveys in this area for 27 years for the [redacted] so i know what birds, butterflies and mammals are likely to be seen in the area, although this can change each year. We are also finding that the area you intend to use for solar panels is good for breeding Skylarks and close by good for breeding Lapwings and for the first time this year Oystercatcher which used the field you intend to put the substation in to feed. The inclusion of the water area on this part will be good for both Lapwings , Oystercatchers and amphibians but the area around to the south needs to be managed for these birds and Skylarks. A recent solar farm at Common Farm Dinnington allowed for large managed meadow areas for Skylark to breed 40 x 75m and 8.7 ha managed for Lapwings to breed and included several scrapes.

Anston

The fields to the [redacted] need more land scrape mitigation and enhancement due to breeding Skylarks and breeding Barn Owls close by(hedges need to be left to increase in height). We are also finding that the area you intend to use for solar panels is good for breeding Skylarks and from time to time for breeding Lapwings when bare areas have been left or flooded and the crops dying. The inclusion of wader scrapes and ponds on this part will be good for both Lapwings and amphibians. The area around this area needs to be managed for these birds and Skylarks. A recent solar farm at Common Farm Dinnington allowed for large managed meadow areas for Skylark to breed 40 x 75m and 8.7 ha managed for Lapwings to breed and included several scrapes.

Hardwick

The area of land [redacted] area improved for breeding Lapwings, Snipe and Redshanks which used to breed here in good numbers and Skylarks still do. In the late eighties and early nineties Curlews bred on the site a very rare lowland breeder. In the past it did have breeding Long eared and Barn Owls(these probably still do). Its a marshy area and could be greatly improved to to bring back the birds mentioned. Like the Common farm solar panel site wader scrapes and ponds would be a great asset to breeding waders and amphibians.

Brampton en le Morthen and Hawk hill Lane

The area of land could have its meadow area improved for breeding Lapwings, snipe and Redshank, which used to breed here in good numbers and Skylarks still do. Until recently it did have breeding Long eared and Barn Owls(these probably still do). Its a marshy area and could be greatly improved to bring back the birds mentioned. Like the Common farm solar panel site wader scrapes and ponds would be a great asset to breeding waders and amphibians.
