Subject: Aquind interconnector planning application
Date: 07 July 2025 16:21:13

Aquind Ltd has a significant amount of debt on its balance sheet of its most recent accounts published by Companies House

Aquind Ltd has still not published details of its public liability insurance policy and associated insurance costs for this project

The Aquind interconnector project has been rendered obsolete as its competitor alternative through the channel tunnel from France to England - ElecLink a 1,000 MW electric interconnector cable started operating on 25 May 2022

The Ministry of Defence have raised significant security concerns pertaining to the Aquind Interconnector project and these must be the primary factor in rejecting the planning application

Across the political spectrum in Portsmouth and surrounding areas there is united and implacable opposition to the Aquind interconnector project on security, economic, source of funding, and environmental grounds and it is important that the Labour government that has been in power for a year now with sufficient time to review the evidence now makes a decision that will bin the Aquind interconnector project

James Gunston
