

Just to say, as a concerned local resident and someone who cares passionately about wildlife and the natural world, please reconsider your choice of site for the proposed new inverter station.

I should also like to point out that sustainability is something I care about too, so I'm fully behind the development of wind and solar installations. I also understand that for those energy sources to be optimally utilised the grid requires updating. Having said that I return to my original point, please don't destroy Minster Marshes but find another location for this development that will cause less harm to our precious flora and fauna. Thank you.
