Dear planning inspectorate

I attended the hearing at Snape Maltings on Thurs 6th Nov at the pm session and I am now forwarding what I said and any additional points I wish to add.

My husband and I have lived in Sizewell for over 20 years and virtually straight away offshore wind projects started in the area

namely Gabbard and Galloper .It seems that ever since I have been involved with consultation after consultation which I felt obliged to attend to show that the locals feel strongly about where they live and I try to be a voice for the wildlife and flora that is and will be hugely impacted if this destruction to the countryside is allowed to continue .

Windfarms have bombarded the east coast and now we have SZC/D exploding around us . It is a total nightmare Sizewell is a nuclear area going back to the early 60's with Sizewell A being first .

Because the area delivers energy via the super grid the energy gates have been opened for everything else to descend on the area. I feel the area has more than enough to cope with delivering nuclear power.

All the infrastructure for offshore energy should be kept at sea .East Anglia Three has just installed the largest offshore convertor station .This should lead the way for Sealink and more ie Lionlink to do the same.

Yes it's tempting to put it near to the east coast but it will be total overload for the communities. Why should the area be sacrificed and ruined .Tourism has played a huge part to the economy here and because of the upheaval taking place people are staying away it is hardly peaceful and relaxing for them now.

Residents cannot freely move around and towns are losing shops due to lack of trade.Minster Marshes in Kent is a valuable habitat that should not be ruined by Sealink The community there is equally disturbed by the potential disruption.National Grid are systematically marching their way along the whole of the East of England hiding behind the so called upgrade to deliver clean energy .If Sealink is allowed to construct then more will follow it states in the feedback form that their proposals include the option of co - locating infrastructure with that of up to 2 other projects. This can be born out by the arrival of SPR after Gabbard and Galloper More and more companies will descend here..

There is a limit and it has been reached with the build of SZC/D there will be years and years of disruption this area is at saturation point and people are at the end of their tether our health is suffering .There is no way I will stop fighting but it is truly unthinkable that communities should be forced to engage in this way It's not fair to oblige people to get so intensively involved Yesterday showed with the peaceful protest outside the true commitment and solidarity of people

Thankyou

Sincerely Mrs Patricia Dorcey
