

I am submitting a written response regarding the Sea Link project and the Applicant's Thematic response to my RR-0799. The Thematic response has done nothing to allay my fears and concerns. I live in the Aldeburgh. I cannot begin to tell you the problems concerning the building of Sizewell C. I know it is a completely different project but it demonstrates only too clearly what effects a large energy project will have on the delicate natural environment as well as the negative impact on local residents. Already we have lost acres of the natural environment which cannot be replaced with our lifetime. Further loss of farmland is a threat to food security. The impact on the mental health on the local populace can be measured by the impact of Sizewell C infrastructure. The migration offered by the Applicant is completely inadequate and unsubstantiated. The National Grid has only one interest and that is to maximise profits and minimise costs, hence their deeply flawed Sea Link plans.
