

I am astounded that the proposed routes for cabling and sites for converter stations are being suggested in areas of either 1) Areas of outstanding natural beauty 2) sites of special scientific interest or 3) prime arable land. I find this very disturbing and a wilful disregard of Nature and the counties valuable land resource as a means to provide food. There are plenty of Brownfield sites available closer to the area for which the power which will be required that can be utilised for converter stations and these should be utilised primarily in the first instance
