

As the energy projects in the locality get underway, I am writing as a local resident to register my concerns about the impact these activities are having on our lives.

Traffic on the narrow lanes seems to have increased exponentially.

A major concern for me is the risk of major flooding in the village and the effect all this activity for the next however many years, is going to have on the local housing market.

There has not been an utterance of redress to the residents and communities that are being impacted by this upheaval and the many inconveniences it has brought. The feeling is one of being treated like collateral damage.
