

The NG would mean loss of wildlife habitat, & damage to the saltmarsh. It has been shown that noise & vibration on the flora & fauna damages this habitat. We need to have more of these habitats to insure against climate change and to insure nature is continued for conservation. NG can alter the direction of this grid line, this affects our environment, communities and the ecosystem that are imperative to protect our wildlife species. This impacts the whole landscape, damaging Pegwell Bay is against all sense and safety and coastal protection, which again has been a major concern, so think again NG you have to think of the future of our environmental protection, not just our energy supply!
